

# Pass Guaranteed ISQI First-grade CTAL-TAE - ISTQB Certified Tester Advanced Level, Test Automation Engineering Latest Material

What's more, part of that ActualPDF CTAL-TAE dumps now are free: [https://drive.google.com/open?id=1ABDorbKg8Dv7x7KS91DqOt-ielkA\\_LSm](https://drive.google.com/open?id=1ABDorbKg8Dv7x7KS91DqOt-ielkA_LSm)

You can easily get ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) certified if you prepare with our ISQI CTAL-TAE questions. Our product contains everything you need to ace the CTAL-TAE certification exam and become a certified IT professional. So what are you waiting for? Purchase this updated ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) exam practice material today and start your journey to a shining career.

ISQI CTAL-TAE Certification Exam is designed for individuals who want to demonstrate their expertise in test automation engineering at an advanced level. CTAL-TAE exam is based on the ISTQB Advanced Level syllabus and covers a wide range of topics such as test automation design, implementation, and maintenance. ISTQB Certified Tester Advanced Level, Test Automation Engineering certification is highly recognized in the software testing industry and can help professionals stand out in a competitive job market.

## **CTAL-TAE PDF Cram Exam & Latest Test CTAL-TAE Experience**

With the rapid development of our society, most of the people choose express delivery to save time. Our delivery speed is also highly praised by customers. Our CTAL-TAE exam dumps won't let you wait for a long time. As long as you pay at our platform, we will deliver the relevant CTAL-TAE test prep to your mailbox within 5-10 minutes. Our company attaches great importance to overall services, if there is any problem about the delivery of CTAL-TAE Test Braindumps, please let us know, a message or an email will be available. And our CTAL-TAE exam questions can help you pass the exam in the shortest time.

ISQI CTAL-TAE Exam is designed to test the candidates' knowledge and skills in various areas of test automation engineering. CTAL-TAE exam covers topics such as test automation strategy, design and implementation of test automation frameworks, automation of test cases, and maintenance of test automation suites.

## ISQI ISTQB Certified Tester Advanced Level, Test Automation Engineering Sample Questions (Q26-Q31):

### NEW QUESTION # 26

Consider the following example of TAS metrics.

Time to execute automated tests

Speed and efficiency of TAS components

Which of the following statements is TRUE?

- A. A is an internal TAS metric and B is an external TAS metric
- B. A and b are both external TAS metric
- C. A is an external TAS metric and b is an internal TAS metric
- D. A and B are both internal TAS metrics

**Answer: C**

### NEW QUESTION # 27

A project consists of distributed teams working in a 24-hour environment, where activities happen at all hours of the day. This project adopts a CI (Continuous Integration) process when developer check-in code and consists of automated activities that include generating a build and deploying it to a test environment.

Automated integration tests are run multiple times a day. The project has asked for a report containing the automation test results for every build, which must be available 24/7 to the project team.

Which of the following would be the BEST way to automatically provide this report?

- A. Store the execution result of the integration tests for the last build to a database (overwriting the results from the previous build), automatically create a test execution report for this build and send it via e-mail to the project team
- B. Store the code coverage results of the integration tests for the last build to a database (without overwriting the results from the previous builds). And automatically create a chart showing the trend in code coverage and send via email to the project team
- C. Store the execution results of the integration tests for the last build to a database (without overwriting the results from the previous builds), use this database to automatically update a dashboard containing the build history and test results accessible to the project team
- D. Store the execution results of the integration tests for the last build to a database (without overwriting the results from the previous builds). Automatically create a test execution report for this build and send it via e-mail to the project team

**Answer: C**

### NEW QUESTION # 28

Consider a SUT that is small and runs on multiple platforms during the execution of automated test runs. In each test run an automated test suite needs to be executed, with the same version of the TAF, against the same version of the SUT of each platform. Each platform shall have its own dedicated test environment. Your goal is to implement a process as automated as possible (i.e. with minimal manual intervention) that allows implementing a consistent setup of the TAS across the multiple test environments.

Which two of the following aspects are MOST relevant for achieving your goal in this scenario?

\* The configuration of the TAS uses automated installation scripts

\* The TAF saves the logs needed to debug errors in XML format

C) Features of the TAF not used by the automated tests have been tested D) All the automated test cases contain the expected results E) The TAS components are under configuration management

- A. B and c
- B. A and e
- C. B and d
- D. A and d

**Answer: B**

### NEW QUESTION # 29

Consider a TAS associated to dynamically changing software frequent releases. Your goal is to determine the amount of effort required to maintain the automated tests of the regression test suite for each new release of the SUT. What is the MOST important metric to collect to achieve your goal?

- A. The number of automated tests which fail because of a single software defect, for each new release of the SUT
- B. The number of automated tests requiring maintenance, for each new release of the SUT.
- C. The time it takes to execute all the automated tests, for each new release of the SUT.
- D. The code coverage achieved with the automated tests, for each new release of the SUT

**Answer: A**

### NEW QUESTION # 30

(In User Acceptance Testing (UAT) for a new SUT, in addition to the manual tests performed by the end- users, automated tests are performed that focus on the execution of repetitive and routine test scenarios. In which of the following environments are all these tests typically performed?)

- A. Integration environment
- B. Preproduction environment
- C. Build environment
- D. Production environment

**Answer: B**

Explanation:

TAE distinguishes test environments by purpose and risk. User Acceptance Testing is typically performed in an environment that is as production-like as feasible (configuration, data shape, integrations) but still controlled and safe for testing activities. This is commonly referred to as preproduction (often "staging"): it supports realistic end-to-end flows, allows business users to validate that the SUT meets acceptance criteria, and enables running routine/repetitive automated checks without risking live operations. A build environment is focused on compiling/packaging and basic verification, not business acceptance. An integration environment is used to validate interactions among components/systems, but may not reflect full production-like configuration, and it's often shared and volatile-less suitable for formal acceptance activities involving end users. Production is generally avoided for UAT because acceptance testing can alter live data, disrupt users, and introduce unacceptable business risk; production testing is typically limited to tightly controlled smoke checks, monitoring, or specific "in-production" validation patterns with strong safeguards. Therefore, the environment in which both end-user manual UAT and supporting automated routine scenarios are typically executed is the preproduction environment, aligning with TAE's guidance on balancing realism with risk containment.
