Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q102-Q107):

NEW QUESTION # 102

An organization is trying to invoke REST APIs as part of its integration with external systems, which requires OAuth 2.0 tokens for authorization.

How should authorization tokens be acquired in a Mule application?

- A. Use HTTP Connector's Authentication Feature
- B. Write custom Java code for handling authorization tokens
- C. Implement Scheduler-based flow for retrieving/saving OAuth 2.0 tokens in Object Store
- D. Configure OAuth 2.0 in Client Management in Anypoint Platform

Answer: A

NEW QUESTION # 103

An architect decided to use Platform Events for integrating Salesforce with an external system for a company.

Which three things should an architect consider when proposing this type of integration mechanism? Choose 3 answers

- A. To publish an event, the integration user in salesforce needs create permission on the event entity.
- B. Salesforce needs to be able to store information about the external system in order to know which event to send out.
- C. Error handling must be performed by the remote service because the event is effectively handed off to the remote system for further processing.
- D. External system needs to have the same uptime in order to be able to keep up with Salesforce Platform Events.
- E. To subscribe to an event, the integration user in salesforce needs read access to the event entity.

Answer: A,C,E

NEW QUESTION # 104

What specific requirement can CloudHub address with its custom VPC feature?

- A. Real-time data analytics.
- B. Enhanced security for application data.
- C. Direct data migration from on-premises servers.
- D. Deployment of non-Mule applications.

Answer: B

NEW QUESTION # 105

What is a best practice when designing Mule applications for high performance with large data volumes?

- A. Increase the timeout settings for all operations.
- B. Always store data in memory for faster access.
- C. Minimize data transformation and enrichment operations.
- D. Use a single-thread model for simplicity.

Answer: C

NEW QUESTION # 106

Refer to the exhibit.

A telecommunications company receives orders (bill payments) from customers who submit a simple HTML form (no JavaScript or Web Assembly). Currently the process is synchronous and the customer is notified after everything is complete. The requirement is that the customer is notified of payment (charging the customer's credit card) through the response to the browser, but the customer can also be notified when the order is applied to the customer's account at a later time. Due to an increase in customers, the system has been unable to handle the load and the solution has been experiencing performance and reliability issues. Which request point could be replaced with an event-driven API using a JMS queue to help mitigate the performance issues, increase the fault tolerance, and meet the requirements?

- A. 0

- B. 1
- C. 2
- D. 3

Answer: D

NEW QUESTION # 107

.....

Our Mule-Arch-202 study braindumps are comprehensive that include all knowledge you need to learn necessary knowledge, as well as cope with the test ahead of you. With convenient access to our website, you can have an experimental look of free demos before get your favorite Mule-Arch-202 prep guide downloaded. It is not just an easy decision to choose our Mule-Arch-202 prep guide, because they may bring tremendous impact on your individuals development. Holding a professional certificate means you have paid more time and effort than your colleagues or messmates in your major, and have experienced more tests before succeed.
