

# IDP Online Training Materials | VCE IDP Dumps

PrepAwayTest assists people in better understanding, studying, and passing more difficult certification exams. We take pride in successfully servicing industry experts by always delivering safe and dependable exam preparation materials. You will need authentic CrowdStrike IDP Exam Preparation material if you want to take the CrowdStrike Certified Identity Specialist(CCIS) Exam exam to expand your career opportunities.

In order to cater to different needs for customers, three versions for IDP training materials are available, and you can choose the most suitable one according to your own needs. IDP PDF version is printable, and if you prefer to practice on paper, you can choose this version and print it into hard one. IDP Soft test engine can stimulate the real exam environment, so that you can know the process of the exam, you can choose this version. Besides, IDP Soft test engine has two modes for practice, and it supports MS operating system. IDP Online test engine is convenient and easy to learn, and it has testing history and performance review, if you like this mode, you can choose this version.

## VCE IDP Dumps, Practice IDP Test Online

The three formats of CrowdStrike IDP practice material that we have discussed above are created after receiving feedback from thousands of professionals around the world. You can instantly download the CrowdStrike IDP Real Questions of the PrepAwayTest right after the payment. We also offer our clients free demo version to evaluate the of our CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) valid exam dumps before purchasing.

## CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q44-Q49):

### NEW QUESTION # 44

How many days will an identity-based incident be suppressed if new events related to the same incident occur?

- A. 7 days
- B. 14 days
- **C. 5 days**
- D. 30 days

**Answer: C**

**Explanation:**

Falcon Identity Protection uses incident suppression windows to prevent alert fatigue while still maintaining accurate incident tracking. According to the CCIS documentation, when new events related to an existing identity-based incident occur, the incident is suppressed for 5 days.

This suppression means that Falcon does not generate a new incident for the same activity during this window. Instead, additional detections are added to the existing incident, allowing analysts to view the full progression of the threat in a single investigative context.

The 5-day suppression window ensures that ongoing identity attacks—such as repeated authentication abuse or lateral movement—are consolidated rather than fragmented across multiple incidents. This improves investigation efficiency and aligns with Falcon's incident lifecycle management approach.

Because the suppression period is fixed at 5 days, Option D is the correct and verified answer.

### NEW QUESTION # 45

Within the Falcon Identity Protection portal, which page allows you to enable/disable Policy Rules?

- A. Identity-Based Detections
- B. Policy Enforcement
- C. Configure
- D. Enforce

**Answer: D**

Explanation:

In Falcon Identity Protection, Policy Rules are managed within the Enforce section of the portal. The CCIS documentation explains that Enforce is the operational area where administrators create, enable, disable, and manage Policy Rules and Policy Groups. This section is specifically designed for identity enforcement logic, allowing security teams to activate or suspend rules without modifying underlying configurations or analytics. Enabling or disabling a Policy Rule immediately affects how identity conditions are enforced across the environment.

Other sections serve different purposes:

Configure manages connectors, domains, subnets, and risk settings.

Identity-Based Detections is used for investigation and monitoring.

Policy Enforcement is not a standalone navigation section in Falcon Identity Protection.

Because rule activation and enforcement control reside exclusively in Enforce, Option B is the correct and verified answer.

### NEW QUESTION # 46

The NIST SP 800-207 framework for Zero Trust Architecture defines validation and authentication standards for users in which network locations?

- A. Only those users accessing the network remotely over VPN
- B. Only those users outside the network
- C. All users both inside and outside of the network
- D. Only those users inside the network

**Answer: C**

Explanation:

The NIST SP 800-207 Zero Trust Architecture framework fundamentally rejects the concept of implicit trust based on network location. As outlined in both NIST guidance and reinforced in the CCIS curriculum, all users must be continuously validated and authenticated regardless of whether they are inside or outside the network perimeter.

Zero Trust assumes that threats can originate from anywhere, including internal networks. Therefore, authentication and authorization decisions must be made dynamically using identity, device posture, behavior, and risk signals—not network placement.

Falcon Identity Protection aligns directly with this principle by continuously evaluating identity behavior for all users, whether they authenticate from internal corporate networks, remote locations, or cloud environments.

Because Zero Trust applies universally, Option C is the correct and verified answer.

### NEW QUESTION # 47

An account without a phone number, operating system, or role of CEO would typically be defined as:

- A. Corporate
- B. Enterprise
- C. Human
- D. Programmatic

**Answer: D**

Explanation:

Falcon Identity Protection classifies accounts based on observed authentication behavior and associated identity attributes, not solely on naming conventions. According to the CCIS curriculum, programmatic accounts (such as service accounts or application accounts) typically lack human-centric attributes like a phone number, assigned operating system, job title, or executive role (for example, CEO).

Human accounts generally have enriched identity context sourced from directory services and identity providers, including user

profile details, interactive login behavior, and endpoint associations. In contrast, programmatic accounts authenticate non-interactively, often on predictable schedules, and do not require personal attributes to function.

Falcon analyzes authentication traffic to automatically identify these characteristics and classify the account accordingly. An account missing human identity signals—such as a phone number or endpoint ownership—strongly aligns with programmatic behavior. Because the absence of personal attributes and interactive context is a defining indicator of a programmatic account, Option A is the correct and verified answer.

#### NEW QUESTION # 48

How should an organization address the domain risk score found in the Domain Security Overview page?

- A. Address the risks on the list from top to bottom as risks are presented in a descending order
- B. Prioritizing the risks by severity, addressing the Medium (Yellow) risks first
- C. Prioritizing the risks by severity, addressing the Low (Green) risks first
- D. Prioritizing the detections by severity, addressing the High (Red) detections first

**Answer: A**

Explanation:

The Domain Security Overview page in Falcon Identity Protection presents domain risks in a prioritized, descending order, based on a combination of severity, likelihood, and consequence. The CCIS curriculum emphasizes that organizations should address risks from top to bottom, as the list is already optimized to reflect the most impactful identity risks first.

This ordering allows security teams to focus remediation efforts where they will produce the greatest reduction in overall domain risk score. Addressing risks sequentially ensures alignment with Falcon's risk modeling and avoids misprioritization that could occur if teams focus only on color-based severity or individual detections.

The incorrect options reflect common misconceptions:

- \* Medium risks should not be prioritized over higher-impact risks.
- \* Detections are different from risks and should not be addressed independently of risk context.
- \* Low risks are intentionally deprioritized by the platform.

By following the descending order provided in the Domain Security Overview, organizations align remediation with Falcon's Zero Trust-driven identity risk scoring methodology, making Option A the correct answer.

#### NEW QUESTION # 49

.....

Choose IDP exam Topics Pdf to prepare for your coming test, and you will get unexpected results. IDP pdf version is very convenient to read and review. If you like to choose the paper file for study, the IDP pdf file will be your best choice. The CrowdStrike IDP Pdf Dumps can be printed into papers, so that you can read and do marks as you like. Thus when you open your dumps, you will soon find the highlights in the IDP papers. What's more, the 99% pass rate can help you achieve your goals.

**VCE IDP Dumps:** <https://www.prepawaytest.com/CrowdStrike/IDP-practice-exam-dumps.html>

I think it is very worthy of choosing our IDP actual exam dumps, If you purchase our IDP VCE dumps, we guarantee your information will be highly protected and your money will be safe, At this moment, our company has been regarded as the best retailer of the IDP study materials, During your preparation, IDP exam torrent will accompany you to the end, CrowdStrike IDP Online Training Materials So we must be aware of the importance of the study tool.

The Magnetic Lasso tool creates a free-form selection automatically as you move or drag the mouse, What Sets Entertainment Marketing Apart, I think it is very worthy of choosing our IDP Actual Exam Dumps.

### Quiz 2026 Valid CrowdStrike IDP Online Training Materials

If you purchase our IDP VCE dumps, we guarantee your information will be highly protected and your money will be safe, At this moment, our company has been regarded as the best retailer of the IDP study materials.

During your preparation, IDP exam torrent will accompany you to the end, So we must be aware of the importance of the study tool.
