300-535 Latest Cram Materials - Training 300-535 Kit

Although at this moment, the pass rate of our Cisco 300-535 exam braindumps can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our Automating and Programming Cisco Collaboration Solutions 300-535 Preparation materials win a place in the field of exam question making forever.

Exam Details and Topics

If talking about the exam structure, each candidate will have 90 minutes to answer about 60 multiple-choice questions. You can also face with the other question types, such as drag and drop, testlets, multiple choice (multiple/single answer), as well as fill-in-the-blank. It is required to score 825 or more points to be able to obtain the certification. Please note that the test is available in English only and costs $300. As soon as you are ready to measure your skills, the Cisco 300-535 exam should be scheduled on the Pearson VUE platform.

Cisco 300-535 Exam Tests the candidate's knowledge of the programming languages used in Cisco collaboration solutions, including Python, JavaScript, and JSON. 300-535 exam also evaluates the candidate's ability to use REST APIs to integrate Cisco collaboration solutions with other applications. Passing 300-535 exam validates the candidate's skills in automating and programming Cisco collaboration solutions and signifies that they possess the knowledge and skills required to work with Cisco collaboration solutions.

Cisco Automating and Programming Cisco Collaboration Solutions Sample Questions (Q87-Q92):

NEW QUESTION # 87
Refer to the exhibit. XTC has been configured by an engineer. What does the IPv4 address represent on the snippet?

- A. configured for the local peer for state synchronization
- B. destination address of the router on which it listens for PCEP
- C. configured for the remote peer for state synchronization
- D. local address of the router on which it listens for PCEP

Answer: D

NEW QUESTION # 88
Refer to the exhibit.
XTC has been configured by an engineer. What does the IPv4 address represent on the snippet?

- A. configured for the local peer for state synchronization
- B. destination address of the router on which it listens for PCEP
- C. configured for the remote peer for state synchronization
- D. local address of the router on which it listens for PCEP

Answer: D

NEW QUESTION # 89
Refer to the partial Cisco IOS XR configurations exhibit for Router 1 and Router 2.
There are two routers that are connected back to back over the Gigabit Ethernet link. If the "show mpls ldp neighbor" command output on Router 1 does not show LDP peering with Router 2, what could be the possible root cause of the LDP peering problem?

- A. missing interface under OSPF IGP configuration
- B. MPLS LDP session protection is not configured
- C. hello timers mismatch on Router 1 and Router 2
- D. password for LDP session mismatch on Router 1 and Router 2

Answer: A

Explanation

NEW QUESTION # 90
What are two advantages of using Python virtual environments? (Choose two.)

- A. They allow for multiple Python projects to use different versions of the same dependency without conflict.
- B. They allow for multiple virtual machines to share a single Python environment.
- C. They allow multiple Python applications to share virtual memory between subprocesses.
- D. They allow for isolated environments where each can use a different version of Python.
- E. They allow for all Python projects to utilize the same set of shared dependencies.

Answer: A,D

NEW QUESTION # 91

Refer to the exhibit. An engineer is using telemetry data to gather monitoring information from the network devices. During testing, the configuration worked with no issues. When it was applied to the live environment, the dial-out telemetry streams are not being sent. Which step is missing to configure a Cisco IOS XR router for telemetry streams dial-out?

- A. subscription activation
- B. destination-group configuration
- C. subscription configuration
- D. destination-group activation

Answer: B

Explanation:

The configuration in the exhibit shows sensor-groups and subscriptions, but for telemetry dial-out to function, you must also configure a destination-group (to define where to send the telemetry data). The subscriptions reference the destination-group (e.g., destination-id test), but the actual destination-group configuration is missing. Without it, the router does not know where to send the telemetry data streams.

NEW QUESTION # 92
