Get Excellent New 1Z0-947 Braindumps Files and Pass Exam in First Attempt

Passing the Oracle 1Z0-947 certification exam is not a tough thing to do but we make it so. The main reason is that we don't know how to study from the 1Z0-947 exam questions we have. We assume that we can study one night and can easily take the Oracle GoldenGate 19c Implementation Professional 1Z0-947 Exam the next morning. This was possible only when we were the school. Now, it is not possible.

Oracle GoldenGate 19c Implementation Professional Sample Questions (Q74-Q79):

NEW QUESTION # 74

Which database setting for the Oracle 19c database is required to enable Oracle GoldenGate?

- A. **ENABLE_GOLDENGATE_REPLICATION=true**
- B. ENABLE_DATABASE_REPLICATION=true
- C. ENABLE_STREAMS_REPLICATION=true
- D. Configure the STREAMS_POOL_SIZE database parameter

Answer: A

Explanation:

To enable Oracle GoldenGate in Oracle 19c, set `ENABLE_GOLDENGATE_REPLICATION=TRUE`, which allows the database to support GoldenGate features like Integrated Extract and Replicat.

NEW QUESTION # 75

Users of both Extract and Replicat require the DBA role for the database.

- A. TRUE
- B. FALSE

Answer: B

Explanation:

Full DBA role is not mandatory for Extract or Replicat.

NEW QUESTION # 76

In integrated mode, the Replicat process leverages the apply processing functionality that is available within the Oracle database. How does it operate?

- A. It reads the Oracle GoldenGate trail, performs data filtering, mapping, and conversion. Then, it constructs logical change records (LCRs) from source database DML transactions. DDL is applied directly by Replicat. Finally, it transmits the LCRs to the inbound server, which applies the data to the target database.
- B. It reads the Oracle GoldenGate trail, performs data filtering, mapping and conversion. Then, it transmits the regular change records to the inbound server, which applies the data to the target database.
- C. It reads the Oracle GoldenGate trail, performs data filtering, mapping, and conversion. Then, it constructs logical change records (LCRs) from source database DML transactions. Then it is attached to a background process in the target database by means of lightweight streaming mechanism, which transmits the LCRs to the inbound server, which applies the data to the target database.
- D. It reads the Oracle GoldenGate trail, performs data filtering, mapping and conversion. Then, it constructs logical change records from source database DML transactions. Next, it uses standard SQL to apply data directly to the target tables.

Answer: A

Explanation:

Integrated Replicat constructs LCRs for DML, sends them to the inbound server for apply, while DDL is applied directly by Replicat-not through the inbound server.

NEW QUESTION # 77

You have an issue where all threads are waiting for a specific transaction to be executed first. What is this issue related to?

- A. It is caused by `THREAD` and `THREADRANGE` being used with wildcard `MAP` statements.
- B. It is caused by the thread with the highest thread ID applying barrier transactions.
- C. It is caused by barrier transactions in a Coordinated Replicat.
- D. It is caused by the use of the `MAXTRANSOPS` parameter.

Answer: C

Explanation:

In Coordinated Replicat, a barrier transaction is a transaction that must be applied in commit order, causing all threads to pause until that transaction is completed - leading to the situation where all threads wait for one.

NEW QUESTION # 78

Proper prerequisite planning will ensure a successful Initial Load. To ensure not to miss any data, before starting any instantiation method, it is important you verify that all open transactions that existed when Extract was started are completed. Which two sources

do you use to see that transactions no longer exist before beginning instantiation?

- **A. GV\$TRANSACTION**
- B. DBA\$TRANSACTION
- C. GG\$TRANSACTION
- **D. V\$TRANSACTION**

Answer: A,D

Explanation:

GV\$TRANSACTION - shows active transactions across all RAC instances
EXCLUDEHIDDENCOLUMNS

NEW QUESTION # 79
