問題 #11

Which search type in keywords do they represent in Oracle Text?

- A. List
- B. Standard
- C. Oracle Text

答案: C

解題說明:

In Oracle APEX, when configuring search functionality (e.g., in reports or faceted search), "Oracle Text" refers to a specific search type leveraging the Oracle Text engine. This is a powerful full-text search capability built into Oracle Database, supporting keyword-based searches, fuzzy matching, and indexing.

Standard: A basic SQL-based search (e.g., LIKE), not tied to Oracle Text.

List: Not a search type; it might refer to a UI component or LOV, not a search mechanism.

Oracle Text: Explicitly uses the CONTAINS operator and text indexes (e.g., CONTEXT or CTXCAT) for advanced search features, ideal for large datasets or complex queries.

This choice impacts performance and accuracy, especially in text-heavy applications.

問題 #12

Which three statements are true about Data Workshops in Oracle APEX?

- A. You can load or unload a single table at a time.
- B. You can unload data from a new or existing table.
- C. You can load or unload multiple tables at a time.
- D. You can load data into a new or existing table.

答案: A,B,D

解題說明:

Data Workshop in SQL Workshop is a powerful tool for importing/exporting table data:

B. You can load or unload a single table at a time: The wizard focuses on one table per operation. For loading, you upload a file (e.g., CSV) and map it to a single table; for unloading, you select one table to export (e.g., EMP to CSV). This granularity ensures precision and simplicity.

C. You can unload data from a new or existing table: Unloading (exporting) works on any table in the schema, whether newly created (e.g., via Quick SQL) or pre-existing (e.g., DEPT). The "Unload" option generates a file (e.g., CSV, JSON) from the table's data.

D. You can load data into a new or existing table: Loading supports creating a new table from the uploaded file (e.g., CSV defines NEW_EMP) or appending/overwriting an existing one (e.g., EMP). The wizard prompts for table creation or selection.

A. You can load or unload multiple tables at a time: False; Data Workshop processes one table per wizard run. Multiple tables require separate operations or custom SQL scripts.

Technical Insight: Loading uses APEX_DATA_LOADING internally, parsing files into rows, while unloading leverages APEX_DATA_EXPORT. For example, uploading emp.csv with "Create New Table" generates a table with inferred columns.

Use Case: Migrating EMP data from a legacy system (CSV) into APEX, then exporting it later for analysis.

Pitfall: Multi-table operations need SQL Scripts or external tools like SQL Developer.

問題 #13

Which two actions are performed by using the Object Browser?

- A. Create a lookup table based on a column in the current table.
- B. Browse database objects of the current schema.
- C. Restore dropped database objects.
- D. Create and run SQL scripts.

答案: A,B

解題說明:

Object Browser in SQL Workshop is a GUI for managing schema objects:

B . Browse database objects of the current schema: Displays tables, views, procedures, etc., in a tree view, allowing inspection of definitions (e.g., columns, constraints) and data previews.

D . Create a lookup table based on a column in the current table: From a table's column (e.g., DEPTNO), you can generate a lookup table (e.g., DEPT_LOOKUP) with unique values, automating reference table creation.

A . Restore dropped objects: Not supported; this requires DBA tools (e.g., FLASHBACK TABLE).

C . Create and run SQL scripts: This is a SQL Scripts feature, not Object Browser.

Practical tip: Use "Create Lookup Table" to normalize data efficiently.

問題 #14

Which statement is true about Theme Styles in Oracle APEX?

- A. When the Is Public attribute is enabled, end users can choose the Theme Style from the runtime environment.
- B. The "Is Current" attribute of a Theme Style depends on the "Read Only" attribute.
- C. Theme Styles control the layout of a webpage.

答案: A

解題說明:

Theme Styles define visual aspects (e.g., colors, fonts) in APEX:

B . When the Is Public attribute is enabled: Setting "Is Public" to "Yes" allows end users to select from available Theme Styles at runtime (e.g., via a UI switcher), enhancing customization.

A . Control the layout: False; layout is managed by templates and regions, not Theme Styles, which focus on aesthetics.

C . "Is Current" depends on "Read Only": False; "Is Current" marks the active style, independent of "Read Only" (which locks editing).

Practical note: Public styles require multiple defined styles in Shared Components.

問題 #15

What are two reasons to enable the "Used by App Builder" option while creating a Generative AI Server?

- A. To author SQL powered by Generative AI
- B. To create a Working Copy of your application
- C. To create a REST-enabled database object
- D. To build applications using natural language powered by Generative AI

答案: A,D

解題說明:

Enabling "Used by App Builder" for a Generative AI Server allows:

Author SQL powered by Generative AI: Integrates AI-driven SQL generation in App Builder.

Build applications using natural language: Enables natural language prompts to create app components.

Options A and B are unrelated to this setting, as it's specific to AI integration in App Builder.
