NEW QUESTION # 156

Which Wi-Fi standard helps devices join Wi-Fi networks and roam more quickly and effectively between access points?

- A. 802.11r
- B. FastLane
- C. 802.11q
- D. 802.11ad

Answer: A

Explanation:

802.11r enhances roaming. The Apple Platform Deployment Guide states, "802.11r, or Fast BSS Transition, improves Wi-Fi performance by enabling faster roaming between access points, reducing authentication overhead." Option C is a QoS feature, not a standard, and A and D are unrelated.

Reference:

Apple Platform Deployment Guide, "Wi-Fi Standards" section.
macOS Deployment Reference, "Network Optimization" section.

NEW QUESTION # 157

What's the benefit of using Managed Distribution?

- A. Separates personal and managed data
- B. Allows personalization
- C. Simplifies enrollment
- D. Enables app license management

Answer: D

Explanation:

Managed Distribution, available through Apple Business Manager or Apple School Manager, enables app license management by allowing organizations to purchase, assign, and revoke app licenses centrally. This ensures efficient use of licenses, reassignment as needed, and compliance with licensing terms.

Personalization (option A) is unrelated to distribution. Data separation (option C) is a feature of User Enrollment, not Managed Distribution. Simplified enrollment (option D) pertains to ADE, not app management. The Apple Business Manager User Guide highlights license management as the primary benefit.

Reference: Apple Business Manager User Guide (Section: Managed Distribution).

NEW QUESTION # 158

What validates face and fingerprint data from Face ID and Touch ID sensors in Apple devices?

- A. Encrypt mail, web, and other internet traffic.
- B. Encrypt tokens for Recovery Lock, Bypass Code, and Personal Recovery Key.
- C. Process data from Face ID and Touch ID sensors.
- D. Secure MDM communications and APNs notifications.

Answer: C

Apple Platform Security Guide, "Secure Enclave" section.
iOS Deployment Reference, "Biometric Security" section.

NEW QUESTION # 159

What can you use to supervise devices and apply additional restrictions?

- A. Managed Apple IDs
- B. Apple School Manager
- C. Apple Business Manager
- **D. Apple Configurator**

Answer: D

Explanation:

Apple Configurator, a macOS application, allows administrators to supervise Apple devices (iOS, iPadOS, tvOS) by connecting them via USB. Supervision enables additional restrictions and management capabilities (e.g., blocking app removal) beyond standard MDM. Apple Business Manager (option A) and Apple School Manager (option C) manage enrollment and content but don't supervise devices directly. Managed Apple IDs (option D) are accounts, not supervision tools. The Apple Platform Deployment Guide highlights Apple Configurator's role in supervision.

NEW QUESTION # 160

Which feature allows IT administrators to manage notifications settings on a device?

- A. iCloud
- B. Find My
- **C. Configuration profiles**
- D. MDM

Answer: C

Explanation:

Configuration profiles allow IT administrators to manage notification settings on a device, such as disabling notifications for specific apps, configuring Do Not Disturb, or restricting Notification Center access. These profiles are deployed via MDM or manually. Find My (option B) and iCloud (option C) are unrelated to notification management. MDM (option D) delivers profiles, but the profiles contain the settings. The Apple Platform Deployment Guide details notification control via profiles.
