### WGU Cloud Deployment and Operations Sample Questions (Q18-Q23):

#### NEW QUESTION # 18

(Which action must be used to create a metric filter in the Amazon CloudWatch console?)

- A. Define a trace
- **B. Select a log group**
- C. Enable an alarm
- D. Specify a stream

**Answer: B**

Explanation:

To create a metric filter in the Amazon CloudWatch console, the first step is to select a log group from which the log data will be analyzed. A log group contains log streams, and metric filters are applied to the log data within these groups to extract metrics based on patterns. The WGU Cloud Deployment and Operations Study Guide (Section 4.2, CloudWatch Logs) specifies that the process begins by navigating to the CloudWatch console, selecting a log group, and then defining the filter pattern. Actions like enabling an alarm, defining a trace, or specifying a stream are subsequent or unrelated steps.

### NEW QUESTION # 19

(What is a patch baseline attached to if it is not defined in Patch Manager?)

- A. Baseline data set
- B. Accelerate patch baseline
- **C. Default patch group**
- D. Patch process

**Answer: C**

Explanation:

If a patch baseline is not explicitly defined in Patch Manager, it is attached to the default patch group. This default group applies a preconfigured baseline with AWS-recommended patches, ensuring basic compliance for instances without custom baselines. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Patch Manager) states, "If no custom patch baseline is defined, instances are associated with the default patch group, which uses AWS-provided baseline settings for automatic patch approval." Options A, C, and D are not valid attachments for patch baselines.

### NEW QUESTION # 20

(Which function is used to obtain components defined in an AWS CloudFormation template?)

- **A. Ref**
- B. GetAZs
- C. Cidr
- D. ImportValue

**Answer: A**

Explanation:

The `Ref` function in an AWS CloudFormation template is used to obtain values of components defined within the template, such as resource IDs, parameters, or outputs. This function allows dynamic referencing of resources during stack creation. The WGU Cloud Deployment and Operations Study Guide (Section 5.3, CloudFormation Functions) states, "The `Ref` function is used to reference the logical IDs of resources, parameters, or mappings defined in the template, enabling dynamic value retrieval (e.g., `Ref: MyEC2Instance` returns the instance ID)." `ImportValue` is used for cross-stack references, `Cidr` for IP range calculations, and `GetAZs` for availability zone lists, making them unsuitable here.

### NEW QUESTION # 21

(What is the advantage of maximizing the time to live of the cache in CloudFront?)

- A. Facilitate a high number of requests
- **B. Minimize requests to the origin**
- C. Improve a disaster recovery plan
- D. Improve security measures

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Maximizing the time to live (TTL) of the cache in Amazon CloudFront reduces the frequency of requests to the origin server by serving content from edge locations for a longer period, lowering latency and costs. The WGU Cloud Deployment and Operations Study Guide (Section 4.4, CloudFront Caching) states, "A higher TTL in CloudFront caching minimizes origin requests by keeping objects in edge caches longer, reducing load on the origin server and optimizing performance and cost." Facilitating high request volumes, improving disaster recovery, and enhancing security are not primary benefits of maximizing TTL.

### NEW QUESTION # 22

(Which two retention periods are supported by Performance Insights? Choose 2 answers.)

- A. 1 day

- B. 2 years
- C. 1 year
- D. 7 days

**Answer: C,D**

Explanation:

Amazon RDS Performance Insights supports retention periods of 7 days and 1 year for storing performance data, depending on the configuration and edition. The default retention is 7 days for standard monitoring, while enabling enhanced monitoring or the Performance Insights extended retention feature allows data to be retained for up to 1 year. The WGU Cloud Deployment and Operations Study Guide (Section 7.2, Performance Insights) states, "Performance Insights offers a 7-day retention period by default, with an option to extend to 1 year for detailed historical analysis, supporting cost and performance optimization." Options A (1 day) and D (2 years) are not supported retention periods.
