Valid Salesforce Analytics-Con-201 Exam Pass4sure - Analytics-Con-201 Latest Study Plan

Salesforce Analytics-Con-201 certification exams are a great way to analyze and evaluate the skills of a candidate effectively. Big companies are always on the lookout for capable candidates. You need to pass the Analytics-Con-201 Certification Exam to become a certified professional. This task is considerably tough for unprepared candidates however with the right Analytics-Con-201 prep material there remains no chance of failure.

Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q22-Q27):

NEW QUESTION # 22

A project team member uploads a CSV file to CRM Analytics, and they notice a few records failed during the upload. The manager wants to view the error log generated so this can be fixed and uploaded again. The manager has the CRM Analytics administrator permission but is unable to download the error log details.

Why is the manager unable to download the log details?

- A. They do not have the Upload External Data to CRM Analytics permission enabled.
- B. They do not have the Download CRM Analytics Data permission enabled.
- C. Only the user who uploaded the external data file can download the error log.

Answer: C

Explanation:

In CRM Analytics, when a CSV file is uploaded and errors occur during the upload process, an error log is generated. However, only the user who uploaded the external data file can download the error log, even if other users have administrative permissions. This restriction ensures that only the user responsible for the data upload can access the details to resolve the issues.

NEW QUESTION # 23

Universal Containers intends to use a custom Salesforce big object in its org and visualize the data using CRM Analytics. As the number of rows to be synced is quite large, the CRM Analytics consultant is looking to set up an incremental sync with additional filters added as part of the data sync to improve performance.

What should the consultant keep in mind while implementing this?

- A. Only SOSL queries can be used as data sync filters.
- B. Incremental data sync is NOT supported for big objects.
- C. Custom big objects are NOT supported by CRM Analytics.

Answer: B

NEW QUESTION # 24

A new picklist value was added for the Category field on the Account object. This field is already added as part of the Account object data sync and the respective recipe that uses this field.

The CRM Analytics team reports that when they start the recipe it runs successfully with no errors or warnings, but they are unable to see this new value on their existing dashboards.

What is the root cause of this issue?

- A. The Integration User profile does not have access to the field.
- B. There are no records in Salesforce with this new picklist value.
- C. The user who runs the dataflow/recipe does not have access to the field.

Answer: B

NEW QUESTION # 25

Universal Containers (UC) is looking to create a dashboard for whitespace analysis. UC wants to view a particular customer and see what similar customers have bought.

Which recipe transformation is helpful for the consultant to use while creating the dataset?

- A. Predict Missing Values
- B. Timeseries Forecasting
- C. Cluster

Answer: C

NEW QUESTION # 26

CRM Analytics team plans to enable data sync.

Which limit specific to data sync should the team consider before enabling the feature because it may impact existing jobs?

- A. Maximum number of Full Sync connection mode enabled
- B. Maximum number of data sync jobs cannot exceed the limit
- C. Maximum number of objects that can be enabled for data sync

Answer: C

Explanation:

In CRM Analytics, when planning to enable data sync, one of the critical considerations is the limit on the number of objects that can be enabled for data sync. This limit is essential because it determines how many different Salesforce objects (like Accounts, Opportunities, etc.) can be synchronized concurrently. Exceeding this limit could impact the performance of existing sync jobs or prevent new sync jobs from being configured.

Key points to consider include:

* Performance Impact: Syncing too many objects simultaneously can lead to increased load times and potential delays in data availability, impacting users' ability to access up-to-date information.

* Resource Allocation: CRM Analytics allocates resources based on the number of objects being synchronized, and there are practical limits to these resources to ensure stable and efficient operation.

For a more detailed understanding and to manage these limits effectively, Salesforce provides documentation and guidelines within the CRM Analytics resources, which can be further explored in the Trailhead modules specifically focusing on data management and synchronization practices.

NEW QUESTION # 27

.....

If you use the trial version of our Analytics-Con-201 study materials, you will find that our products are very useful for you to pass your exam and get the certification. Though the trial version of our Analytics-Con-201 learning guide only contains a small part of the exam questions and answers, but it shows the quality and validity. If you buy our Analytics-Con-201 Exam Questions, we can promise that you will pass the exam for sure and gain the according the certification.
