The ISTQB Certified Tester Advanced Level, Test Automation Engineering certification exam is one of the top-rated career advancement certification exams. The ISQI CTAL-TAE certification exam can play a significant role in career success. With the ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) certification, you can gain several benefits such as validation of skills, career advancement, competitive advantage, continuing education, and global recognition of your skills and knowledge.

Nowadays there is a growing tendency in getting a certificate. CTAL-TAE study materials offer you an opportunity to get the certificate easily. CTAL-TAE exam dumps are edited by the experienced experts who are familiar with the dynamics of the exam center, therefore CTAL-TAE Study Materials of us are the essence for the exam. Besides we are pass guarantee and money back guarantee. Any other questions can contact us anytime.

Examcollection CTAL-TAE Dumps & CTAL-TAE Valid Dumps

You must want to know your scores after finishing exercising our CTAL-TAE study guide, which help you judge your revision. Now, our windows software and online test engine of the CTAL-TAE real exam can meet your requirements. You can choose from two modules: virtual exam and practice exam. Then you are required to answer every question of the CTAL-TAE Exam Materials. And they will show the scores at the time when you finish the exam.

ISQI ISTQB Certified Tester Advanced Level, Test Automation Engineering Sample Questions (Q51-Q56):

NEW QUESTION # 51

Which of the following statements about a test progress report produced for an automated test suite is TRUE?

- A. The test progress report should indicate the test environment in which the tests were performed
- B. The content of the test progress report should not be affected by the stakeholders to whom the report is intended
- C. The test progress report should indicate, for each test in the suite, the timestamps related to the test steps
- D. The test progress report should indicate, for each test in the suite, the start and end timestamps of the test

Answer: A

Explanation:

TAE reporting guidance emphasizes that stakeholders must be able to interpret results in context. A fundamental contextual attribute is the test environment: where the SUT was deployed, what configuration was used, and (by implication) what data and integrations were in play. Without environment identification, results can be misleading, non-reproducible, or not comparable across runs (e.g., failures caused by environment instability vs. product defects). Therefore, including the environment in the progress report is a core requirement. Option B is incorrect because TAE explicitly promotes tailoring reports to stakeholder needs; different audiences require different levels of detail, summaries, and views. Option A is generally too granular for a progress report: step-level timestamps belong more to detailed execution logs and troubleshooting artifacts, not to a progress report intended to communicate status efficiently. Option D may be included in some reports, but it is not as universally required as the environment identifier; and in TAE,

"progress report" tends to focus on overall status (what ran, what passed/failed, trends, coverage, environment) rather than per-test timing metadata. Thus, the reliably true statement is that the report should indicate the test environment.

NEW QUESTION # 52

Consider A TAS for testing a desktop application via its GUI. All the test cases of the automated test suite contain the same identical sequences of steps at the beginning (to create the necessary objects when doing a preliminary configuration of the test environment and at the end (to remove everything created -specifically for the test itself during the preliminary configuration of the test environment). All automated test cases use the same set of assertion functions from a shared library, for verifying the values in the GUI fields (e.g text boxes).

What is the BEST recommendation for improving the TAS?

- A. Adopting a set of standard verification methods for use by all automated tests
- B. Improving the architecture of the application in order to improve its testability
- C. Implementing standard setup and teardown functions at test case level
- D. Implementing keywords with higher level of granularity

Answer: D

NEW QUESTION # 53

You have been asked to determine a TAS for a new release of a SUT, test should be automated wherever. The new release will consist of 5 new interfaces and an amendment to 3 existing interfaces. The new and amended interface will be deliver incrementally in 3 sprints, each lasting 2 weeks.

What would be the BEST Test Automation Solution (TAS) design in this scenario?

- A. Automate tests at one level only, System level. Use only the newly developed interfaces and do not create any customized interfaces/test hooks.
- B. Automate tests at both Component and System Level. Only do this automation once every interface has been fully developed or amended and manual testing has completed successfully.
- C. Automate a test at once level, component level, Create customized interface/test hooks for this level where the interface has not yet been developed or amended.
- D. Automate the tests at two levels, Component and System level. Create customized hooks at Component level for interface not yet developed or amended. Only use the newly developed or amended interfaces to test at System level.

Answer: B

NEW QUESTION # 54

You are reviewing the testability of your SUT.

Which of the following BEST refers to the characteristic of OBSERVABILITY?

- A. The ability to identify states, outputs, intermediate result and error messages in the SUT

- B. The ability of the SUT to perform its intended function for a specified period of time
- C. The ability of the SUT to prevent unauthorized access to its components or data.
- D. The ability to exercise the SUT by entering inputs, triggering events and invoking methods

Answer: A

NEW QUESTION # 55

Which of the following BEST describes why it is important to separate test definition from test execution in a TAA?

- **A. It allows specify test cases without being closely tied to the tool to run them against the SUT**
- B. It allows developing steps of the test process without being closely tied to the SUT interface.
- C. It allows testers to find more defects on the SUT
- D. It allow choosing different paradigms (e.g event-driven) for the interaction TAS and SUT

Answer: A

NEW QUESTION # 56

.....

The latest CTAL-TAE latest questions will be sent to you email, so please check then, and just feel free to contact with us if you have any problem. Our reliable CTAL-TAE exam material will help pass the exam smoothly. With our numerous advantages of our CTAL-TAE latest questions and service, what are you hesitating for? Our company always serves our clients with professional and precise attitudes, and we know that your satisfaction is the most important thing for us. We always aim to help you pass the CTAL-TAE Exam smoothly and sincerely hope that all of our candidates can enjoy the tremendous benefit of our CTAL-TAE exam material, which might lead you to a better future!
