

SAP C-BCBTP-2502必殺問題集 & C-BCBTP-2502全真模擬試験

無料でクラウドストレージから最新のTopexamC-BCBTP-2502 PDFダンプをダウンロードする：<https://drive.google.com/open?id=1V2w7uGLBTup0tXB1rOtig8kh-BY1wVRW>

Topexamの専門家チームが君の需要を満たすために自分の経験と知識を利用してSAPのC-BCBTP-2502認定試験対策模擬テスト問題集が研究しました。模擬テスト問題集と真実の試験問題がよく似ています。一目でわかる最新の出題傾向でわかりやすい解説と充実の補充問題があります。

SAP C-BCBTP-2502 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">• SAP Business Technology Platform の理解：このセクションでは、SAP ソリューションアーキテクトのスキルを評価し、SAP Business Suite 戦略全体における SAP Business Technology Platform の位置付けに焦点を当てます。変革の実現、企業戦略との整合性、デジタルイノベーションの支援におけるプラットフォームの役割を理解することが含まれます。受験者は、現代のビジネスプロセスにおける SAP BTP の関連性と、他の SAP 製品との統合方法を理解することが求められます。
トピック 2	<ul style="list-style-type: none">• SAP Business SuiteによるCIO変革の実現：このセクションでは、ITトランスフォーメーション・マネージャーのスキルを評価し、CIO主導のデジタルトランスフォーメーションにおける価値提供におけるSAP Business Suiteの役割について解説します。エンタープライズITにおけるSAPポートフォリオの重要性を強調し、SAP BTPの機能を紹介するとともに、エンドツーエンドのプロセスや業界固有のユースケースとの連携方法を示します。受験者は、SAP BTPに含まれる主要製品を特定し、ポートフォリオを横断するコンポーネントがどのように統合されて測定可能な価値を実現するかを説明できる必要があります。

更新するC-BCBTP-2502必殺問題集 & 合格スムーズC-BCBTP-2502全真模擬試験 | 大人気C-BCBTP-2502資格受験料

試験準備のための学習資料を見つけている場合、当社の資料は検索を終了します。私たちのC-BCBTP-2502試験トレントは、あなたが期待できない高品質を持っています。C-BCBTP-2502トレントは時間を大幅に節約するのに役立ち、あなたがやりたいことをする自由時間が増えると思います。私たちのC-BCBTP-2502テスト問題集の使用について後悔がないことを保証できます。アクションの時間が来たら、思考を止めて、入って、私たちのC-BCBTP-2502試験トレントを試してください。C-BCBTP-2502試験に合格し、短時間で証明書を取得する必要があります。

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite 認定 C-BCBTP-2502 試験問題 (Q14-Q19):

質問 # 14

Why is SAP BTP considered a strategic platform for digital transformation?

- A. It eliminates the need for external data management solutions.
- **B. It centralizes integration, automation, and data-driven decision-making.**
- C. It allows enterprises to move all workloads to SAP on-premise solutions.
- D. It provides a one-size-fits-all solution without customization options.

正解: B

解説:

SAP BTP is the strategic foundation for the "Intelligent, Sustainable Enterprise." Its primary value lies in its ability to centralize integration, automation, and data-driven decision-making into a single, unified platform. In a modern IT landscape, data is often fragmented across multiple cloud and on-premise systems.

BTP acts as the unified technical layer that breaks down these silos. By providing a common set of services for data management (SAP HANA Cloud), analytics (SAP Analytics Cloud), and integration (SAP Integration Suite), BTP ensures that business leaders have a holistic view of their operations.

Digital transformation requires more than just moving to the cloud; it requires the ability to innovate quickly.

BTP's strategic positioning allows businesses to extend their core SAP applications (like S/4HANA) using side-by-side extensions. This keeps the "core" clean and stable while allowing for rapid innovation at the edge. Furthermore, the platform's automation capabilities (like SAP Build Process Automation) enable companies to optimize their workflows, reducing manual effort and increasing accuracy. By choosing BTP, enterprises are not just buying a set of tools; they are adopting a platform strategy that supports continuous improvement and agility, ensuring they can adapt to market changes more effectively than they could with fragmented, legacy architectures.

質問 # 15

Which SAP BTP tool helps organizations manage sustainability risks and compliance?

- A. SAP BusinessObjects
- B. SAP Integration Suite
- C. SAP Workflow Management
- **D. SAP Sustainability Control Tower**

正解: D

解説:

As global regulations regarding Environmental, Social, and Governance (ESG) standards become more stringent, organizations must move beyond manual reporting to automated sustainability management. SAP Sustainability Control Tower, which runs on SAP BTP, is designed specifically for this purpose. It helps organizations manage sustainability risks and compliance by providing a centralized "control center" that collects and processes ESG data from across the enterprise and its supply chain.

The tool leverages the data management and analytics capabilities of BTP (specifically SAP Datasphere and SAP Analytics Cloud) to provide a transparent view of a company's sustainability performance against its targets. It allows for the integration of non-financial data-such as carbon emissions, water usage, and labor statistics-with traditional financial data from the SAP Business Suite. This positioning is vital because it enables "holistic steering," where sustainability is treated with the same rigor as financial profitability. By using SAP Sustainability Control Tower on BTP, businesses can ensure they are meeting legal compliance requirements while also building trust with investors and customers through verified, data-driven sustainability disclosures.

質問 # 16

What is the primary function of SAP Business Process Intelligence?

- A. To store customer transactional data.
- B. To replace existing workflow automation tools.
- C. To manage API security and integrations.
- **D. To analyze and optimize business processes using AI-driven insights.**

正解: D

解説:

Before an organization can automate or improve its operations, it must first understand how its processes are actually running. The primary function of SAP Business Process Intelligence (largely centered around the SAP Signavio suite) is to analyze and optimize business processes using AI-driven insights. It provides

"Process Mining" capabilities that scan the data logs of the SAP Business Suite to reveal the "real" path a business process takes, often uncovering hidden bottlenecks, manual workarounds, and deviations from the standard procedure.

By positioning Business Process Intelligence as a starting point for digital transformation, SAP BTP allows organizations to make data-backed decisions about where to automate. For example, the tool might discover that a specific regional office takes twice as long to process purchase orders compared to the global average.

Using AI, it can identify the root cause—such as a lack of automation or incorrect master data—and recommend specific BTP services (like SAP Build) to fix the issue. This creates a cycle of continuous improvement, where processes are constantly monitored, analyzed, and optimized, ensuring that the SAP Business Suite operates at peak efficiency and remains aligned with the company's strategic goals.

質問 # 17

Which of the following capabilities does SAP AI Core provide?

- A. Strictly rule-based automation without AI capabilities.
- B. Hardware infrastructure for AI development.
- C. Predictive analytics and machine learning model deployment.
- D. Transactional data management for ERP systems.

正解: C

解説:

SAP AI Core is a vital service within the "Intelligent Technologies" pillar of SAP BTP, designed to handle the heavy lifting of artificial intelligence at an enterprise scale. Its primary capability is providing a standardized, highly scalable runtime for predictive analytics and machine learning (ML) model deployment. In the modern SAP Business Suite, "intelligence" is no longer just a buzzword; it is a functional requirement. SAP AI Core allows businesses to take raw data from their systems, train sophisticated models, and then deploy those models into production environments where they can serve real-time predictions.

This service is unique because it supports the full lifecycle of an AI model, including execution and monitoring. It allows developers to integrate AI features into their applications while maintaining "AI Ethics" and transparency, which are critical for enterprise compliance. Unlike standard transactional databases that focus on record-keeping, SAP AI Core focuses on "inference"—using data to generate new insights and automate complex decisions. By positioning SAP AI Core as the engine for intelligence, SAP BTP ensures that organizations can move beyond basic automation toward advanced, self-learning processes that improve over time, such as predictive maintenance in manufacturing or intelligent lead scoring in sales.

質問 # 18

Which SAP BTP component supports microservices-based application development?

- A. SAP Kyma Runtime
- B. SAP SuccessFactors
- C. SAP Business Network
- D. SAP Concur

正解: A

解説:

As enterprises move toward modern, scalable application architectures, the move from monolithic codebases to microservices becomes essential. SAP Kyma Runtime is the specific component of SAP BTP designed to support this transition. It is a fully managed Kubernetes-based environment that allows developers to extend SAP applications using serverless functions and microservices. Kyma provides a cloud-native way to build and run containerized applications, offering high scalability and flexibility. Positioning Kyma within the SAP Business Suite ecosystem is critical for "side-by-side" extensibility. It allows developers to build specialized services—such as a custom loyalty engine or a unique logistics tracker—using their preferred programming languages and frameworks (like Node.js, Go, or Python) while maintaining a seamless connection to the SAP core. Kyma is particularly powerful for "event-driven" architectures; it can listen for events in SAP S/4HANA (like a "New Sales Order created" event) and instantly trigger a microservice to perform a specific action in a third-party system. This decouples the innovation layer from the stable core,

allowing for rapid updates and deployments without risking the stability of the primary business processes.

質問 # 19
