

How Can You Pass the Juniper JN0-224 Exam Quickly and Easily?

JN0-224 Exam Details	
Vendor	Juniper
Exam Code	JN0-224
Full Exam Name	Automation and DevOps Associate
Number of Questions	65
Sample Questions	Juniper JN0-224 Sample Questions
Practice Exams	Juniper Networks Certified Associate Automation and DevOps Practice Test
Passing Score	Pass / Fail (60-70% Approx.)
Time Limit	90 minutes
Languages	English

100% Guaranteed Success with NWExam.com

There are rare products which can rival with our products and enjoy the high recognition and trust by the clients like our products. Our products provide the JN0-224 study materials to clients and help they pass the test JN0-224 certification which is highly authorized and valuable. Our company is a famous company which bears the world-wide influences and our JN0-224 Study Materials are recognized as the most representative and advanced study materials among the same kinds of products. Whether the qualities and functions or the service of our product, are leading and we boost the most professional expert team domestically.

The Juniper JN0-224 certification provides is beneficial to accelerate your career in the tech sector. Today, the JN0-224 is a fantastic choice to get high-paying jobs and promotions, and to achieve it, you must crack the challenging Juniper exam. It is critical to prepare with actual JN0-224 Exam Questions if you have less time and want to clear the test in a short time. You will fail and waste time and money if you do not prepare with real and updated Juniper JN0-224 Questions.

JN0-224 Exam Cram Pdf, New JN0-224 Braindumps Sheet

Generally speaking, Juniper certification has become one of the most authoritative voices speaking to us today. Let us make our life easier by learning to choose the proper JN0-224 test answers, pass the JN0-224 exam, obtain the certification, and be the master of your own life, not its slave. Our JN0-224 Exam Questions are exactly what you are looking for. With three different versions of JN0-224 exam study materials are shown on our website, so you will be glad to know you have so many different ways to study.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Topic 2	<ul style="list-style-type: none">Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
Topic 3	<ul style="list-style-type: none">Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.

Topic 4	<ul style="list-style-type: none"> • Python • PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Topic 5	<ul style="list-style-type: none"> • NETCONF • XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q49-Q54):

NEW QUESTION # 49

You want to use a Python package or module.

In this scenario, which statement would accomplish this task?

- A. input
- B. reap
- C. dir
- D. Import

Answer: D

Explanation:

In Python, to use a package or module, you use the `import` statement. This statement allows you to load a module into your script so that you can use its functions, classes, and variables. For example, if you wanted to use the `math` module, you would write `import math`. This makes all the functions and constants in the `math` module available for use in your program.

Option A (`reap`), B (`dir`), and C (`input`) do not serve the purpose of importing modules. `dir` is used to list the attributes of an object, `input` is used to get user input, and `reap` is not a valid Python command related to importing modules.

Supporting Reference:

Python Documentation on Imports: The Python documentation provides clear guidelines on how to use the `import` statement to include modules in your Python scripts.

NEW QUESTION # 50

Which two statements are valid regarding Junos automation? (Choose two.)

- A. The `jsd` process handles JET API requests.
- B. The `mod` process handles XML API calls.
- C. The `mgd` process handles JET API requests.
- D. The `jsd` process handles XML API calls.

Answer: A,D

Explanation:

In Junos automation, several processes handle API requests, and understanding which process handles what is crucial:

`jsd` Process:

XML API Calls (A): The `jsd` process is responsible for handling XML API calls, which are a significant part of Junos automation. XML API allows for structured and standardized communication with Junos devices, enabling automation scripts to query and configure devices.

JET API Requests (C): The `jsd` process also handles JET (Junos Extension Toolkit) API requests. JET provides a more modern, programmable interface for interacting with Junos OS, and `jsd` is the process that manages these interactions.

`mgd` Process (Incorrect Option):

Not for JET API Requests: The `mgd` process handles general management operations, such as CLI commands and managing the configuration database, but it does not handle JET API requests. That role is fulfilled by `jsd`.

`mod` Process (Incorrect Option):

Not for XML API Calls: The `mod` process deals with managing chassis components and is not involved in handling XML API calls.

Reference:

Juniper Networks JET and XML API Documentation: Describes the roles of `jsd` in handling both XML and JET API requests.

Junos Automation and DevOps Documentation: Provides insights into how different processes interact with Junos APIs.

NEW QUESTION # 51

You want to perform a dry run on the myPlays playbook and use a custom inventory file called myRouters.ini. Which Ansible command would you use in this scenario?

- A. `ansible-playbook myPlays -extra-vars "inventory_file=myRouters .ini"`
- B. `ansible-playbook myPlays -extra-vars "dry run=True" myRouters.ini`
- C. `ansible-playbook myPlays -limit myRouters`
- D. `ansible-playbook myPlays --check -i myRouters.ini`

Answer: A

NEW QUESTION # 52

Which two statements are correct about the Junos REST API Explorer? (Choose two.)

- A. The REST API Explorer returns data only in XML format.
- B. **The REST API Explorer supports multiple RPC calls.**
- C. The REST API Explorer is enabled by default on all Junos devices.
- D. **The REST API Explorer supports both GET and POST calls.**

Answer: B,D

Explanation:

The Junos REST API Explorer provides an interactive environment to explore and execute REST API calls. The correct statements are:

Supports GET and POST Calls (C): The REST API Explorer allows users to make both GET and POST requests, enabling retrieval and submission of data to the Junos device.

Supports Multiple RPC Calls (D): The REST API Explorer can execute multiple RPC (Remote Procedure Call) commands, allowing a wide range of operations to be performed directly through the interface.

Option A is incorrect because the REST API Explorer is not enabled by default; it must be enabled manually. Option B is incorrect because the REST API Explorer returns data in both XML and JSON formats, not just XML.

Reference:

Junos REST API Explorer Documentation: Provides details on the supported operations and how to use the Explorer for different types of requests.

Juniper Networks Documentation: Covers the setup and usage of the REST API Explorer.

NEW QUESTION # 53

Which Junos configuration database is updated by PyEZ by default?

- A. shared
- B. **private**
- C. ephemeral
- D. dynamic

Answer: B

Explanation:

An event script is used to automate responses to system events in Junos, such as an interface going down. These scripts are triggered automatically when a specified event occurs, making them suitable for tasks like monitoring interface status and executing actions when the status changes.

Option B (event) is correct because event scripts are designed for reacting to system events like an interface going down.

Option A (commit) is used for configuration changes, Option C (operation) is used for operational tasks, and Option D (SNMP) is not applicable in this context.

Supporting Reference:

Juniper Networks Event Scripts Documentation: Details how event scripts are used to automate responses to specific system events in Junos

NEW QUESTION # 54

.....

Attending training institution or having Juniper online training classes may be a good choice for candidates. But for people who have no time and energy to prepare for JN0-224 practice exam, training calss will make them tired and exhausted. The most effective way for them to pass JN0-224 Actual Test is choosing best study materials that you will find in GetValidTest.
