

Pass Guaranteed Quiz Amazon AWS-Certified-Developer-Associate Marvelous Exam Quizzes

P.S. Free & New AWS-Certified-Developer-Associate dumps are available on Google Drive shared by Pass4Test:
<https://drive.google.com/open?id=1ltjvsC2seeX9KtI7WJ9iAWYNseilU73L>

How to realize your dream? Pass4Test Amazon AWS-Certified-Developer-Associate braindump is the royal road to success when preparing for Amazon AWS-Certified-Developer-Associate test. Pass4Test provide you with exam prep, which will pass the exam with assurance.

Are you an IT staff? Are you enroll in the most popular IT certification exams? If you tell me "yes", then I will tell you a good news that you're in luck. Pass4Test's Amazon AWS-Certified-Developer-Associate Exam Training materials can help you 100% pass the exam. This is a real news. If you want to scale new heights in the IT industry, select Pass4Test please. Our training materials can help you pass the IT exams. And the materials we have are very cheap. Do not believe it, see it and then you will know.

Easily Accessible Amazon AWS-Certified-Developer-Associate PDF

The clients at home and abroad can both purchase our AWS-Certified-Developer-Associate study tool online. Our brand enjoys world-wide fame and influences so many clients at home and abroad choose to buy our AWS-Certified-Developer-Associate test guide. Our company provides convenient service to the clients all around the world so that the clients all around the world can use our AWS-Certified-Developer-Associate Study Materials efficiently. Our company boosts an entire sale system which provides the links to the clients all around the world so that the clients can receive our AWS-Certified-Developer-Associate exam questions timely.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q332-Q337):

NEW QUESTION # 332

A developer is troubleshooting an Amazon API Gateway API Clients are receiving HTTP 400 response errors when the clients try to access an endpoint of the API.

How can the developer determine the cause of these errors?

- A. Create an Amazon Kinesis Data Firehose delivery stream to receive API call logs from API Gateway. Configure Amazon CloudWatch Logs as the delivery stream's destination.
- B. Turn on AWS CloudTrail Insights and create a trail Specify the Amazon Resource Name (ARN) of the trail for the stage of the API.
- C. Turn on AWS X-Ray for the API stage Create an Amazon CloudWatch Logs log group Specify the Amazon Resource Name (ARN) of the log group for the API stage.
- **D. Turn on execution logging and access logging in Amazon CloudWatch Logs for the API stage. Create a CloudWatch Logs log group. Specify the Amazon Resource Name (ARN) of the log group for the API stage.**

Answer: D

Explanation:

This solution will meet the requirements by using Amazon CloudWatch Logs to capture and analyze the logs from API Gateway. Amazon CloudWatch Logs is a service that monitors, stores, and accesses log files from AWS resources. The developer can turn on execution logging and access logging in Amazon CloudWatch Logs for the API stage, which enables logging information about API execution and client access to the API.

The developer can create a CloudWatch Logs log group, which is a collection of log streams that share the same retention, monitoring, and access control settings. The developer can specify the Amazon Resource Name (ARN) of the log group for the API stage, which instructs API Gateway to send the logs to the specified log group. The developer can then examine the logs to determine the cause of the HTTP 400 response errors. Option A is not optimal because it will create an Amazon Kinesis Data Firehose delivery stream to receive API call logs from API Gateway, which may introduce additional costs and complexity for delivering and processing streaming data. Option B is not optimal because it will turn on AWS CloudTrail Insights and create a trail, which is a feature that helps identify and troubleshoot unusual API activity or operational issues, not HTTP response errors. Option C is not optimal because it will turn on AWS X-Ray for the API stage, which is a service that helps analyze and debug distributed applications, not HTTP response errors.

NEW QUESTION # 333

An Amazon Kinesis Data Firehose delivery stream is receiving customer data that contains personally identifiable information. A developer needs to remove pattern-based customer identifiers from the data and store the modified data in an Amazon S3 bucket. What should the developer do to meet these requirements?

- A. Launch an Amazon EC2 instance. Set the EC2 instance as the destination of the delivery stream. Run an application on the EC2 instance to remove the customer identifiers. Store the transformed data in an Amazon S3 bucket.
- B. Create an AWS Step Functions workflow to remove the customer identifiers. As the last step in the workflow, store the transformed data in an Amazon S3 bucket. Set the workflow as the destination of the delivery stream.
- C. Create an Amazon OpenSearch Service instance. Set the OpenSearch Service instance as the destination of the delivery stream. Use search and replace to remove the customer identifiers. Export the data to an Amazon S3 bucket.
- **D. Implement Kinesis Data Firehose data transformation as an AWS Lambda function. Configure the function to remove the customer identifiers. Set an Amazon S3 bucket as the destination of the delivery stream.**

Answer: D

NEW QUESTION # 334

A developer needs to store configuration variables for an application. The developer needs to set an expiration date and time for the configuration. The developer wants to receive notifications. Before the configuration expires. Which solution will meet these requirements with the LEAST operational overhead?

- A. Create a standard parameter in AWS Systems Manager Parameter Store Set Expiration and Expiration Notification policy types.
- **B. Create an advanced parameter in AWS Systems Manager Parameter Store Set Expiration and Expiration Notification policy types.**
- C. Create a standard parameter in AWS Systems Manager Parameter Store Create an AWS Lambda function to expire the configuration and to send Amazon Simple Notification Service (Amazon SNS) notifications.
- D. Create an advanced parameter in AWS Systems Manager Parameter Store Create an Amazon EC2 instance with a cron job to expire the configuration and to send notifications.

Answer: B

Explanation:

This solution will meet the requirements by creating an advanced parameter in AWS Systems Manager Parameter Store, which is a secure and scalable service for storing and managing configuration data and secrets. The advanced parameter allows setting expiration and expiration notification policy types, which enable specifying an expiration date and time for the configuration and receiving notifications before the configuration expires. The Lambda code will be refactored to load the Root CA Cert from the parameter store and modify the runtime trust store outside the Lambda function handler, which will improve performance and reduce latency by avoiding repeated calls to Parameter Store and trust store modifications for each invocation of the Lambda function.

Option A is not optimal because it will create a standard parameter in AWS Systems Manager Parameter Store, which does not support expiration and expiration notification policy types. Option B is not optimal because it will create a secret access key and access key ID with permission to access the S3 bucket, which will introduce additional security risks and complexity for storing and managing credentials.

Option D is not optimal because it will create a Docker container from Node.js base image to invoke Lambda functions, which will incur additional costs and overhead for creating and running Docker containers.

NEW QUESTION # 335

A gaming company has recently acquired a successful iOS game, which is particularly popular during the holiday season. The company has decided to add a leaderboard to the game that uses Amazon DynamoDB.

The application load is expected to ramp up over the holiday season.

Which solution will meet these requirements at the lowest cost?

- A. DynamoDB Streams
- B. DynamoDB with DynamoDB Accelerator
- **C. DynamoDB with on-demand capacity mode**
- D. DynamoDB with provisioned capacity mode with Auto Scaling

Answer: C

Explanation:

Explanation/Reference: https://aws.amazon.com/blogs/database/running-spiky-workloads-and-optimizing-costs-by-more-than-90-using-amazon-dynamodb-on-demand-capacity-mode/?nc1=b_rp

NEW QUESTION # 336

An ecommerce company is using an AWS Lambda function behind Amazon API Gateway as its application tier. To process orders during checkout, the application calls a POST API from the frontend. The POST API invokes the Lambda function asynchronously. In rare situations, the application has not processed orders. The Lambda application logs show no errors or failures.

What should a developer do to solve this problem?

- A. Inspect the Lambda logs in Amazon CloudWatch for possible errors. Fix the errors.
- **B. Create and inspect the Lambda dead-letter queue. Troubleshoot the failed functions. Reprocess the events.**
- C. Inspect the frontend logs for API failures. Call the POST API manually by using the requests from the log file.
- D. Make sure that caching is disabled for the POST API in API Gateway.

Answer: B

Explanation:

The solution that will solve this problem is to create and inspect the Lambda dead-letter queue. Troubleshoot the failed functions. Reprocess the events. This way, the developer can identify and fix any issues that caused the Lambda function to fail when invoked asynchronously by API Gateway. The developer can also reprocess any orders that were not processed due to failures. The other options either do not address the root cause of the problem, or do not help recover from failures.

Reference: Asynchronous invocation

NEW QUESTION # 337

.....

Our website aimed to help you to get through your certification test easier with the help of our valid AWS-Certified-Developer-

Associate vce braindumps. You just need to remember the answers when you practice AWS-Certified-Developer-Associate real questions because all materials are tested by our experts and professionals. Our AWS-Certified-Developer-Associate Study Guide will be your first choice of exam materials as you just need to spend one or days to grasp the knowledge points of AWS-Certified-Developer-Associate practice exam.

AWS-Certified-Developer-Associate Valid Exam Blueprint: <https://www.pass4test.com/AWS-Certified-Developer-Associate.html>

Pass4Test will also provide you with up to 365 days of free AWS Certified Developer Associate Exam (DVA-C02) exam questions updates, It will just need to take one or two days to practice Amazon AWS-Certified-Developer-Associate test questions and remember answers, We boost the expert team to specialize in the research and production of the AWS-Certified-Developer-Associate guide questions and professional personnel to be responsible for the update of the study materials, Amazon Exam AWS-Certified-Developer-Associate Quizzes A: The answer to the query is in affirmative.

Time and again, startups have made a lot of money very quickly AWS-Certified-Developer-Associate by being at the right place, at the right time, Action Beats Analysis, Pass4Test will also provide you with up to 365 days of free AWS Certified Developer Associate Exam (DVA-C02) exam questions updates, It will just need to take one or two days to practice Amazon AWS-Certified-Developer-Associate Test Questions and remember answers.

100% Pass Quiz 2026 AWS-Certified-Developer-Associate: AWS Certified Developer Associate Exam (DVA-C02) – Reliable Exam Quizzes

We boost the expert team to specialize in the research and production of the AWS-Certified-Developer-Associate guide questions and professional personnel to be responsible for the update of the study materials.

A: The answer to the query is in affirmative, Q5: Do you include simulations/labs in your service, Our AWS-Certified-Developer-Associate exam practice material will be a good tool for your test preparation.
