

FlashArray-Storage-Professional Pass Test Guide | Top FlashArray-Storage-Professional Dumps

P.S. Free 2026 Pure Storage FlashArray-Storage-Professional dumps are available on Google Drive shared by DumpsActual: <https://drive.google.com/open?id=1NYd4KkJurRy-rNg9I4CTUI24VpJlxXyA>

Our desktop Pure Storage FlashArray-Storage-Professional practice exam software is designed for all those candidates who want to learn and practice in the actual Pure Certified FlashArray Storage Professional (FlashArray-Storage-Professional) exam environment. This desktop practice exam software completely depicts the Pure Storage FlashArray-Storage-Professional Exam scenario with proper rules and regulations so you can practice all the hurdles and difficulties.

With a high quality, we can guarantee that our FlashArray-Storage-Professional practice quiz will be your best choice. There are three different versions about our products, including the PDF version, the software version and the online version. The three versions are all good with same questions and answers; you can try to use the version of our FlashArray-Storage-Professional Guide materials that is suitable for you. Our FlashArray-Storage-Professional exam questions have many advantages, I am going to introduce you the main advantages of our FlashArray-Storage-Professional study materials, I believe it will be very beneficial for you and you will not regret to use our FlashArray-Storage-Professional learning guide.

Top FlashArray-Storage-Professional Dumps | Braindumps FlashArray-Storage-Professional Pdf

All these three Pure Certified FlashArray Storage Professional (FlashArray-Storage-Professional) exam questions formats contain the actual, updated, and error-free Pure Certified FlashArray Storage Professional (FlashArray-Storage-Professional) exam practice test questions that assist you in Pure Certified FlashArray Storage Professional (FlashArray-Storage-Professional) exam preparation. Finally, With the Pure Storage FlashArray-Storage-Professional Exam Questions you will be ready to get success in the final Pure Storage FlashArray-Storage-Professional certification exam. Please choose the best Pure Certified FlashArray Storage Professional (FlashArray-Storage-Professional) exam questions format and download it quickly and start this journey today.

Pure Storage Pure Certified FlashArray Storage Professional Sample Questions (Q49-Q54):

NEW QUESTION # 49

RFC2307 enables cross-protocol support for which two protocols?

- A. NFS, S3
- B. S3, SMB
- C. NFS, SMB

Answer: C

Explanation:

Understanding RFC2307: RFC2307 is an extension to the LDAP (Lightweight Directory Access Protocol) schema that allows for

the storage of Unix-style information (POSIX attributes) within a directory service, most commonly Microsoft Active Directory. These attributes include things like uidNumber (User ID), gidNumber (Group ID), and login shells.

The Cross-Protocol Challenge: In a Unified Storage environment where the same data needs to be accessed by both Windows clients (using the SMB protocol) and Linux/Unix clients (using the NFS protocol), the storage array must be able to map a Windows Security Identifier (SID) to a Unix UID/GID.

How Pure Uses It: When an administrator enables RFC2307 support in Purity//FA File Services, the FlashArray can query Active Directory to retrieve these POSIX attributes. This creates a 1:1 mapping between the Windows user and the Unix identity.

The Benefit: This mapping ensures that a user can create a file via SMB and another user (or the same user on a different system) can access or modify that same file via NFS while maintaining consistent permission enforcement and ownership records. Without this (or a similar mapping service like NIS or local files), cross-protocol access often results in permission "Mapping" errors or files being owned by "nobody."

NEW QUESTION # 50

What command must an administrator run to use newly installed DirectFlash Modules (DFM)?

- A. **puredrive admit**
- B. pureadmin -- admit-drive
- C. purearray admit drive

Answer: A

Explanation:

When new DirectFlash Modules (DFMs) or data packs are physically inserted into a Pure Storage FlashArray, the Purity operating environment detects the new hardware but places the drives in an "unadmitted" state. This safety mechanism prevents the accidental incorporation of drives and allows the system to verify the firmware and health of the modules before they are actively used to store data.

To formally accept these drives into the system's storage pool so their capacity can be utilized, the administrator must execute the CLI command `puredrive admit`. Once this command is run, the drive status transitions from "unadmitted" to "healthy," and the array's usable capacity expands accordingly.

Here is why the other options are incorrect:

`pureadmin -- admit-drive` (A): This is syntactically incorrect. The `pureadmin` command suite is used for managing administrator accounts, API tokens, and directory services, not for hardware or drive management.

`purearray admit drive` (B): This is also incorrect syntax. While `purearray` is used for array-wide settings and status (like renaming the array or checking space), specific drive-level operations are exclusively handled by the `puredrive` command structure.

NEW QUESTION # 51

A FlashArray is configured to use directory services. A user is a member of the groups associated with both Array Admin and Storage Admin.

What will the user experience when logging into the array?

- A. **Array Admin permissions**
- B. Inability to login
- C. Storage Admin permissions

Answer: A

Explanation:

On a Pure Storage FlashArray, Role-Based Access Control (RBAC) allows administrators to integrate with Directory Services (like Active Directory or OpenLDAP) to control user access. Purity uses a specific hierarchy for its administrative roles, which from highest to lowest privilege are: Array Admin, Storage Admin, Ops Admin, and Read Only.

When a user logs in and is found to be a member of multiple Active Directory or LDAP groups that are mapped to different roles on the FlashArray, Purity's behavior is designed to grant the user the highest level of permissions among those conflicting group mappings. Because the Array Admin role is higher in the hierarchy than the Storage Admin role, the user will successfully log in and be granted full Array Admin permissions.

Here is why the other options are incorrect:

Inability to login (A): Purity handles overlapping group memberships gracefully by defaulting to the highest privilege. It does not lock the user out or cause a login failure.

Storage Admin permissions (B): Because the system grants the highest available mapped privilege, the user will not be restricted to the lower-tier Storage Admin role when they also possess group membership for the Array Admin role.

NEW QUESTION # 52

What are the two types of FA File quota limits?

- A. Enforced and Unenforced
- B. File and Block
- C. Limited and Unlimited

Answer: A

Explanation:

In Pure Storage FlashArray File Services (Purity//FA), administrators can apply Quota Policies to managed directories to control and monitor capacity consumption. When configuring the rules for these quotas, the limits are categorized into two specific types: Enforced and Unenforced.

Enforced Quotas (Hard Limits): When a quota rule is set with the --enforced flag set to True, it acts as a hard boundary. If the users or applications writing to that managed directory hit the specified capacity limit, the FlashArray will actively block any further write operations, ensuring the directory cannot exceed its allocated space.

Unenforced Quotas (Soft Limits): When a quota rule is unenforced (the flag is set to False), it acts purely as a monitoring and alerting threshold. Users can continue to write data and organically grow the directory past the specified limit without application disruption, but the system will track the overage and trigger administrative notifications.

Here is why the other options are incorrect:

File and Block (A): This describes the two underlying storage protocols/architectures the unified FlashArray serves, not the types of capacity quota limits for directories.

Limited and Unlimited (B): While you can theoretically leave a file system to grow "unlimited" up to the size of the array, the specific technical parameters in the Purity quota policy engine are defined as enforced vs. unenforced.

NEW QUESTION # 53

Pure Protect //DRaaS is configured with a Business Policy to back up data to AWS. An administrator, with DRaaS Global Admin access, is trying to delete the policy but is unable to do so.

What is restricting the administrator from deleting the policy?

- A. The administrator also needs DRaaS Cloud Admin access.
- B. The Business Policy is marked as the Primary Policy.
- C. Application groups are currently protected under that policy.

Answer: C

Explanation:

In policy-driven data protection and disaster recovery architectures like Pure Protect //DRaaS, a "Business Policy" dictates the critical Service Level Agreements (SLAs) for your environment, such as your Recovery Point Objective (RPO), replication frequency, and retention schedules. These policies are then assigned to "Application Groups," which act as logical containers for the specific virtual machines being protected and replicated to AWS.

As a fundamental safety mechanism built into the platform to prevent accidental exposure and SLA breaches, the system places a hard dependency lock on actively used policies. An administrator cannot delete a Business Policy if there are still Application Groups actively relying on it for their DR scheduling. To successfully delete the policy, the administrator must first modify all associated Application Groups and assign them to a different Business Policy, or completely remove the protection from those groups.

Here is why the other options are incorrect:

The administrator also needs DRaaS Cloud Admin access (C): The scenario explicitly states the user already has "DRaaS Global Admin access." In the Pure Protect //DRaaS Role-Based Access Control (RBAC) model, Global Admin is the highest tier of privilege and has full rights to manage and delete policies. A lack of permissions is not the issue here.

The Business Policy is marked as the Primary Policy (B): While a policy might be a default or primary template, the actual hard restriction that prevents deletion in the software is active resource assignment (the Application Groups), not just a "Primary" label.

NEW QUESTION # 54

.....

Being scrupulous in this line over ten years, our experts are background heroes who made the high quality and high accuracy

FlashArray-Storage-Professional study quiz. By abstracting most useful content into the FlashArray-Storage-Professional guide materials, they have helped former customers gain success easily and smoothly. We can claim that if you prepare with our FlashArray-Storage-Professional Exam Braindumps for 20 to 30 hours, then you will be confident to pass the exam.
