High Pass-Rate XK0-005 – 100% Free Exam Passing Score | Accurate XK0-005 Test

Our XK0-005 prep material target all users and any learners, regardless of their age, gender and education background. We provide 3 versions of our XK0-005 learning prep for the clients to choose based on the consideration that all the users can choose the most suitable version to learn. The 3 versions each support different using method and equipment and the client can use the XK0-005 Exam study materials on the smart phones, laptops or the tablet computers. The clients can choose the version of our XK0-005 exam questions which supports their equipment on their hands to learn.

To take the CompTIA XK0-005 Exam, candidates are required to have at least six to twelve months of experience in Linux administration or an equivalent level of experience. Candidates can also prepare for the exam by taking training courses, reading study materials, and practicing with simulations. Successful candidates will receive the CompTIA Linux+ certification, which is a valuable credential that can help them advance their careers in Linux administration.

CompTIA Linux+ Certification Exam Sample Questions (Q723-Q728):

NEW QUESTION # 723

A systems technician is working on deploying several microservices to various RPM-based systems, some of which could run up to two hours. Which of the following commands will allow the technician to execute those services and continue deploying other microservices within the same terminal session?

- A. `bg %1 job name`
- B. `kill 9 %1`
- C. `gedit & disown`
- D. `fg %1`

Answer: A

Explanation:

The command that will allow the technician to execute the services and continue deploying other microservices within the same terminal session is `bg %1 job name`. This command will send the job with ID 1 and name job name to the background, where it will run without occupying the terminal.

NEW QUESTION # 724

Users are experiencing high latency when accessing a web application served by a Linux machine. A systems administrator checks the network interface counters and sees the following:

Which of the following is the most probable cause of the observed latency?

- A. No IP address is assigned to the interface.
- **B. A connection problem exists on the network interface.**
- C. The gateway is unreachable.
- D. The network interface is disconnected.

Answer: B

Explanation:

The high number of errors and dropped packets in the output of the network interface counters indicate a connection problem on the network interface.

Linux+ (Plus) Certification, Exam Objectives: 4.3 Given a scenario, troubleshoot and resolve basic network configuration and connectivity issues.

NEW QUESTION # 725

A new disk was presented to a server as `/dev/sdd`. The systems administrator needs to check if a partition table is on that disk. Which of the following commands can show this information?

- A. `partprobe`
- B. `lsscsi`
- C. `blkid`
- **D. `fdisk`**

Answer: D

Explanation:

The command that can be used to check if a partition table is on a disk is `fdisk`. The `fdisk` command can display, create, delete, and modify partitions on a disk. To show the partition table of a disk, the administrator can use `fdisk -l /dev/sdd` (B).

NEW QUESTION # 726

The development team wants to prevent a file from being modified by all users in a Linux system, including the root account. Which of the following commands can be used to accomplish this objective?

- A. `chmod 0000 /app/conf/file`
- B. `chmod / app/conf/file`
- **C. `chattr +i /app/conf/file`**
- D. `setenforce / app/ conf/ file`

Answer: C

Explanation:

The `chattr` command is used to change file attributes on Linux systems that support extended attributes, such as `ext2`, `ext3`, `ext4`, `btrfs`, `xfs`, and others. File attributes are flags that modify the behavior of files and directories.

To prevent a file from being modified by all users in a Linux system, including the root account, the development team can use the

chattr +i /app/conf/file command. This command will set the immutable attribute (+i) on the file /app/conf/file, which means that the file cannot be deleted, renamed, linked, appended, or written to by any user or process. To remove the immutable attribute, the development team can use the chattr -i /app/conf/file command.

NEW QUESTION # 727

A systems administrator wants to leverage their password-protected SSH key to connect to multiple servers without entering their password every time. Which of the following commands should the administrator use?

- A. ssh-keygen
- B. ssh-copy-id
- C. ssh-agent
- D. ssh-add

Answer: D

Explanation:

* ssh-add adds the private key to the SSH authentication agent, allowing the user to enter the passphrase once per session.

Reference: CompTIA Linux+ XK0-005 Study Guide, Domain 3.0 - Secure Shell

"Use ssh-add to add the SSH private key to memory, enabling passwordless logins during the session."
