SPLK-1002 Exam Reviews | SPLK-1002 PDF

With the development of the electronic equipment, there are a lot of changes in the designs of our SPLK-1002 pass-sure torrent. The most impressive version is the APP online version. Normally, it can be used on all kinds of digital devices. But it also has the special advantage that the online version can be used when you are not online, As long as you use it for the first time in a networked environment, you can use the online version of our SPLK-1002 learning guide from anywhere without network connection. I believe the online version of our SPLK-1002 exam questions will be a good choice for you

Splunk Core Certified Power User Exam Sample Questions (Q182-Q187):

NEW QUESTION # 182

What are the two parts of a root event dataset?

- A. Constraints and fields.
- B. Fields and variables.
- C. Constraints and lookups.
- D. Fields and attributes.

Answer: A

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/SplunkLight/7.3.5/GettingStarted/Designdatamodelobjects>

NEW QUESTION # 183

When using timechart, how many fields can be listed after a by clause?

- A. because timechart doesn't support using a by clause.
- B. because one field would represent the x-axis and the other would represent the y-axis.
- C. There is no limit specific to timechart.
- D. because `_time` is already implied as the x-axis.

Answer: D

Explanation:

The timechart command is used to create a time-series chart of statistical values based on your search results². You can use the timechart command with a by clause to split the results by one or more fields and create multiple series in the chart². However, you can only list one field after the by clause when using the timechart command because `_time` is already implied as the x-axis of the chart². Therefore, option B is correct, while options A, C and D are incorrect.

NEW QUESTION # 184

A macro has another macro nested within it, and this inner macro requires an argument. How can the user pass this argument into the SPL?

- A. An argument can be passed to the outer macro by nesting parentheses.
- B. An argument can be passed through the outer macro.
- C. An argument can be passed to the inner macro by nesting parentheses.
- D. There is no way to pass an argument to the inner macro.

Answer: C

Explanation:

The correct answer is D. An argument can be passed to the inner macro by nesting parentheses.

A search macro is a way to reuse a piece of SPL code in different searches. A search macro can take arguments, which are variables that can be replaced by different values when the macro is called. A search macro can also contain another search macro within it, which is called a nested macro. A nested macro can also take arguments, which can be passed from the outer macro or directly from the search string.

To pass an argument to the inner macro, you need to use parentheses to enclose the argument value and separate it from the outer macro argument. For example, if you have a search macro named `outer_macro` (1) that contains another search macro named `inner_macro` (2), and both macros take one argument each, you can pass an argument to the inner macro by using the following syntax:

```
outer_macro (argument1, inner_macro (argument2))
```

This will replace the `argument1` and `argument2` with the values you provide in the search string. For example, if you want to pass "foo" as the `argument1` and "bar" as the `argument2`, you can write:

```
outer_macro ("foo", inner_macro ("bar"))
```

This will expand the macros with the corresponding arguments and run the SPL code contained in them.

Search macro examples

Use search macros in searches

NEW QUESTION # 185

When using the timechart command, what optional argument is used to specify the interval of `_time`?

- A. over
- B. by
- C. span
- D. bin

Answer: C

Explanation:

Comprehensive and Detailed Step-by-Step

The timechart command in Splunk is used to generate time-series visualizations of data.

The span argument is used to specify the interval (or bin size) for the `_time` field.

Example usage:

css

CopyEdit

```
index=_internal | timechart span=1h count
```

This command will create a timechart where `_time` is grouped into 1-hour intervals.

`bin` is used in the `bin` command to group numerical or time-based fields but is not specific to timechart.

`by` is used to split results by a specific field but does not define the interval.

`over` is not a valid argument for timechart.

Reference: Splunk Docs - timechart command

NEW QUESTION # 186

This function of the stats command allows you to identify the number of values a field has.

- A. `distinct_count`
- B. `max`
- C. `count`
- D. `fields`

Answer: C

NEW QUESTION # 187

.....

Our passing rate is very high to reach 99% and our SPLK-1002 exam torrent also boost high hit rate. Our SPLK-1002 study questions are compiled by authorized experts and approved by professionals with years of experiences. They are compiled according to the latest development conditions in the theory and practice and the questions and answers are based on real exam. Our SPLK-1002 study questions are linked tightly with the exam papers in the past and conform to the popular trend in the industry. Our product convey you more important information with less amount of the questions and answers. Thus we can be sure that our SPLK-1002 guide torrent are of high quality and can help you pass the exam with high probability.
