

Simplified Document Sharing and Accessibility With CheckPoint 156-587 PDF (Dumps)

The screenshot shows a web-based interface for a CheckPoint 156-587 exam. The top navigation bar includes 'Certs-Exam' and 'Checkpoint - 156-587'. The main content area displays three questions:

Question #1: What does CMI stand for in relation to the Access Control Policy?
A. Context Manipulation Interface
B. Context Management Infrastructure
C. Content Management Interface
D. Content Matching Infrastructure

Answer: B

Explanation: CMI stands for Context Management Infrastructure, which is a component of the Access Control Policy that enables the Security Gateway to inspect traffic based on the context of the connection. Context includes information such as user identity, application, location, time, and device. CMI allows the Security Gateway to apply different security rules and actions based on the context of the traffic, and to dynamically update the context as it changes. CMI consists of three main elements: Unified Policy, Identity Awareness, and Context Awareness.

Question #2: Your users have some issues connecting with Mobile Access VPN to your gateway. How can you debug the tunnel establishment?
A. run vpn debug traceon
B. in the file SVPNDGR.conf httpd.conf change the line LogLevel To LogLevel debug and run vpn restart
C. in the file SVPNHDH.conf httpd.conf change the line LogLevel To LogLevel debug and run expreset
D. run fw ct1 statlog -m svvpn all

Answer: C

Question #3: Like a Site-to-Site VPN between two Security Gateways, a Remote Access VPN relies on the Internet Key Exchange (IKE) what types of keys are generated by IKE during negotiation?
A. Produce a symmetric key on both sides
B. Produce an asymmetric key on both sides
C. Symmetric keys based on pre-shared secret

At the bottom of the interface, it says 'Pass with Valid Exam Questions Pool' and shows a progress bar at 1 of 1.

156-587 real dumps revised and updated according to the syllabus changes and all the latest developments in theory and practice, our Check Point Certified Troubleshooting Expert - R81.20 real dumps are highly relevant to what you actually need to get through the certifications tests. Moreover they impart you information in the format of 156-587 Questions and answers that is actually the format of your real certification test. Hence not only you get the required knowledge but also find the opportunity to practice real exam scenario.

CheckPoint 156-587 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Advanced Client-to-Site VPN Troubleshooting: This section of the exam measures the skills of CheckPoint System Administrators and focuses on troubleshooting client-to-site VPN issues.
Topic 2	<ul style="list-style-type: none">Advanced Gateway Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and addresses troubleshooting techniques specific to gateways. It includes methods for diagnosing connectivity issues and optimizing gateway performance.

Topic 3	<ul style="list-style-type: none"> Advanced Firewall Kernel Debugging: This section of the exam measures the skills of Check Point Network Security Administrators and focuses on kernel-level debugging for firewalls. Candidates will learn how to analyze kernel logs and troubleshoot firewall-related issues at a deeper level.
Topic 4	<ul style="list-style-type: none"> Advanced Site-to-Site VPN Troubleshooting: This section of the exam measures the skills of Check Point System Administrators and covers troubleshooting site-to-site VPN connections.
Topic 5	<ul style="list-style-type: none"> Advanced Access Control Troubleshooting: This section of the exam measures the skills of Check Point System Administrators in demonstrating expertise in troubleshooting access control mechanisms. It involves understanding user permissions and resolving authentication issues.
Topic 6	<ul style="list-style-type: none"> Introduction to Advanced Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and covers the foundational concepts of advanced troubleshooting techniques. It introduces candidates to various methodologies and approaches used to identify and resolve complex issues in network environments.

156-587 Prep Guide - 156-587 Valid Dumps

156-587 practice exam takers can even access the results of previous attempts which helps them in knowing and overcoming their mistakes before appearing in the 156-587 final test. There are thousands of students that bought SurePassExams's 156-587 Practice Exam and got success on their initial tries. We guarantee that if you take our provided CheckPoint 156-587 exam dumps you will crack the 156-587 Exam in a single try.

CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q105-Q110):

NEW QUESTION # 105

You receive reports that Users cannot browse internet sites. You are using identity awareness with AD Query and Identity Collector in addition you have the Browser Based Authentication Enabled. What command can be used to debug the problem?

- A. on the management: ad query debug extended
- B. on the gateway: ad debug on
- C. on the gateway: ad query debug on
- D. on the gateway: pdp debug nac extended**

Answer: D

Explanation:

Identity Awareness is a feature that enables the Security Gateway to identify users and groups behind IP addresses, and apply security policies based on their identity¹². Identity Awareness uses different methods to acquire identities, such as AD Query, Identity Collector, and Browser-Based Authentication¹². To debug Identity Awareness issues, you need to use the command pdp debug on the gateway, where pdp stands for Policy Decision Point, the component that handles the identity acquisition and enforcement¹³. The command pdp debug has different flags for different identity sources, such as adlog for AD Query, ic for Identity Collector, and nac for Browser-Based Authentication¹³. The flag extended enables more detailed debug output¹³.

Therefore, the correct command to debug the problem of users not being able to browse internet sites with Identity Awareness using AD Query, Identity Collector, and Browser-Based Authentication is pdp debug nac extended on the gateway¹³. The other options are incorrect because they either use the wrong command (ad debug instead of pdp debug), the wrong flag (ad query instead of nac), or the wrong location (on the management instead of on the gateway). NEW QUESTION # 106

What is the most efficient way to read an IKEv2 Debug?

- A. any xml editor
- **B. IKE view**
- C. notepad++
- D. vi on the cl

Answer: B

Explanation:

<https://support.checkpoint.com/results/sk/sk30994>

NEW QUESTION # 107

Where will the usermode core files located?

- A. /var/suroot
- B. \$FWDIRVar/log/dump/usermode
- **C. \$CPDIR/var/log/dump/usermode**
- D. /var/log/dump/usermode

Answer: C

Explanation:

Usermode core files are generated when a user mode process crashes. They are located in the \$CPDIR/var/log/dump/usermode directory on the Security Gateway or Security Management server. The core files can be used to analyze the cause of the crash and troubleshoot the issue. The core files are named according to the process name, date, and time of the crash. For example, cpd_2023_02_03_16_40_55.core is a core file for the cpd process that crashed on February 3, 2023 at 16:40:55

NEW QUESTION # 108

What is the best way to resolve an issue caused by a frozen process?

- **A. Kill the process**
- B. Power off the machine
- C. Reboot the machine
- D. Restart the process

Answer: A

Explanation:

When a process is frozen (hung or unresponsive), the typical method to resolve it is to kill the process. On Check Point, you can use cpwd_admin kill -name <ProcessName> or a standard Linux kill -9 <PID> command if necessary. You then allow CPWD (the Check Point watchdog) to restart it, or manually restart it if needed.

Other options:

- A . Power off the machine: This is too drastic and not recommended just for a single frozen process.
- B . Restart the process: While this sounds viable, you typically must kill the frozen process first, then let WatchDog or an admin restart it.
- C . Reboot the machine: Similar to powering off-too disruptive for just one stuck process.

Hence, the most direct and standard approach:

"Kill the process."

Check Point Troubleshooting Reference

sk97638 - Explanation of CPWD (Check Point WatchDog) and how to manage processes.

sk43807 - How to gracefully stop or kill a Check Point process.

Check Point CLI Reference Guide - Details on using cpwd_admin commands to kill or restart processes.

NEW QUESTION # 109

What are the three main component of Identity Awareness?

- A. User, Active Directory and Access Role
- B. Client, SMS and Secure Gateway
- C. Identity Awareness Blade on Security Gateway, User Database on Security Management Server and Active Directory

- D. Identity Source, Identity Server (PDP) and Identity Enforcement (PEP)

Answer: D

NEW QUESTION # 110

.....

We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Therefore, as the famous brand, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our 156-587 exam torrent. Most important of all, as long as we have compiled a new version of the 156-587 Guide Torrent, we will send the latest version of our 156-587 training materials to our customers for free during the whole year after purchasing. We will continue to bring you integrated 156-587 guide torrent to the demanding of the ever-renewing exam, which will be of great significance for you to keep pace with the times.
