Salesforce Certified Data Architect Sample Questions (Q189-Q194):

NEW QUESTION # 189

An architect has been asked by a client to develop a solution that will integrate data and resolve duplicates and discrepancies between Salesforce and one or more external systems. What two factors should the architect take into consideration when deciding whether or not to use a Master Data Management system to achieve this solution?

Choose 2 answers

- A. Whether or not Salesforce replaced a legacy CRM.
- B. The number of systems that are integrating with each other.
- C. Whether the systems are cloud -based or on -premise.
- D. Whether the system of record changes for different tables.

Answer: B,D

NEW QUESTION # 190

A Customer is migrating 10 million order and 30 million order lines into Salesforce using Bulk API. The Engineer is experiencing time-out errors or long delays querying parents order IDs in Salesforce before importing related order line items. What is the recommended solution?

- A. Leverage Batch Apex to update order ID on related order lines after import.
- B. Leverage an External ID from source system orders to import related order lines.
- C. Query only indexed ID field values on the imported order to import related order lines.
- D. Leverage a sequence of numbers on the imported orders to import related order lines.

Answer: B

Explanation:

Leverage an External ID from source system orders to import related order lines. This is the recommended solution because it allows you to use the upsert operation to match records based on the External ID field, which is indexed and unique. This avoids the need to query the parent order IDs in Salesforce before importing the order line items, which can cause time-out errors or long delays.

NEW QUESTION # 191

Universal Containers (UC) wants to ensure their data on 100,000 Accounts pertaining mostly to US-based companies is enriched and cleansed on an ongoing basis. UC is looking for a solution that allows easy monitoring of key data quality metrics. What should be the recommended solution to meet this requirement?

- A. Implement Batch Apex that calls out a third-party data quality API in order to monitor Account data quality.
- B. Implement an Apex Trigger on Account that queries a third-party data quality API to monitor Account data quality.
- C. Use declarative approach by installing and configuring Data.com Prospector to monitor Account data quality.
- D. Use a declarative approach by installing and configuring Data.com Clean to monitor Account data quality.

Answer: D

NEW QUESTION # 192

Get Cloudy Consulting needs to evaluate the completeness and consistency of contact information in Salesforce. Their sales reps often have incomplete information about their accounts and contacts. Additionally, they are not able to interpret the information in a consistent manner. Get Cloudy Consulting has identified certain "key" fields which are important to their sales reps.

What are two actions Get Cloudy Consulting can take to review their data for completeness and consistency? (Choose two.)

- A. Run a report that shows the percentage of blanks for the important fields.
- B. Run one report per key field, grouped by that field, to understand its data variability.
- C. Run a report which shows the last time the key fields were updated.

- D. Run a process that can fill in default values for blank fields.

Answer: A,C

NEW QUESTION # 193

Universal Containers would like to have a Service-Level Agreement (SLA) of 1 day for any data loss due to unintentional or malicious updates of records in Salesforce. What approach should be suggested to address this requirement?

- A. Schedule a Weekly Extract Service for key objects and extract data in XL sheets to on-premise systems.
- B. Build a daily extract job and extract data to on-premise systems for long-term backup and archival purposes.
- C. Evaluate a third-party AppExchange app, such as OwnBackup or Spanning, etc., for backup and archival purposes.
- D. Store all data in shadow custom objects on any updates and deletes, and extract them as needed .

Answer: C

Explanation:

Evaluating a third-party AppExchange app, such as OwnBackup or Spanning, etc., for backup and archival purposes is the best approach to address the requirement of having a one-day SLA for any data loss. These apps can provide automated backups, granular restores, and compliance features that can help UC recover from any data loss or corruption scenarios.
