We aim to provide the best service for our customers, and we demand our after sale service staffs to the highest ethical standard, and our DP-300 study guide and compiling processes will be of the highest quality. We play an active role in making every country and community in which we selling our DP-300 practice test a better place to live and work. Therefore, our responsible after sale service staffs are available in twenty four hours a day, seven days a week. That is to say, if you have any problem after DP-300 Exam Materials purchasing, you can contact our after sale service staffs anywhere at any time.

Mandatory Skills

Candidates are always rummaging around the prerequisites or necessary skills to sit for the Microsoft DP-300 exam. However, it is consoling to know that there are no such significant skills required for partaking in the official testing. Despite this fact, aspirants are recommended by the vendor to take into account the topics tested in DP-900 exam before opting for DP-300.

Microsoft DP-300 exam is designed for database administrators who are looking to validate their skills in administering relational databases on the Microsoft Azure Cloud platform. Administering Relational Databases on Microsoft Azure certification exam is intended for individuals who have expertise in managing and maintaining database solutions in an Azure environment. DP-300 Exam covers various topics such as designing and implementing security, monitoring and optimizing operational resources, designing and implementing a backup strategy, and implementing high availability and disaster recovery solutions.

Reliable Dumps DP-300 Reviews & Perfect Microsoft Certification Training - The Best Microsoft Administering Relational Databases on Microsoft Azure

At present, our company has launched all kinds of DP-300 study materials, which almost covers all official tests. Every DP-300 exam questions are going through rigid quality check before appearing on our online stores. So you do not need to worry about trivial things and concentrate on going over our DP-300 Exam Preparation. After careful preparation, you are bound to pass the DP-300 exam. Just remember that all your efforts will finally pay off.

Exam Pattern

The Microsoft DP-300 Exam is designed to be done within 2 hours. During this time limit, candidates should answer 40-60 questions. The format of the questions includes multiple-choice, build list, drag and drop, etc. In addition, every applicant should pay a fee of \$165.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q288-Q293):

NEW QUESTION # 288

You have a database on a SQL Server on Azure Virtual Machines instance.

The current state of Query Store for the database is shown in the following exhibit.

Answer Area Microsoft

Query Store will retain [answer choice] queries for evaluation.

To change Operation Mode (Actual) to Read write without losing any data, you must modify the [answer choice] setting.

To change Operation Mode (Actual) to Read write without losing any data, you must modify the [answer choice] setting.

Max Size (MB)
Query Store Capture Mode
Size Based Cleanup Mode
Operation Mode (Requested)

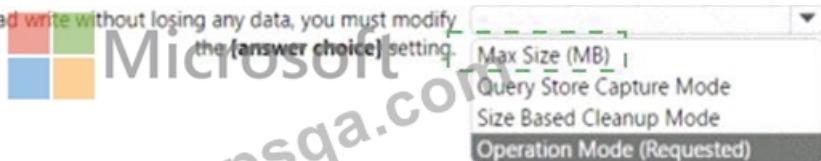

Query Store will retain [answer choice] queries for evaluation.

all
none of the
a selective set of

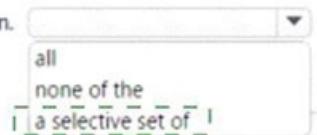

Answer:

Explanation:

To change Operation Mode (Actual) to Read write without losing any data, you must modify the [answer choice] setting.

Query Store will retain [answer choice] queries for evaluation.

Explanation

Graphical user interface, text Description automatically generated

Query Store will retain [answer choice] queries for evaluation. a selective set of

To change Operation Mode (Actual) to Read write without losing any data, you must modify the [answer choice] setting. Max Size (MB)

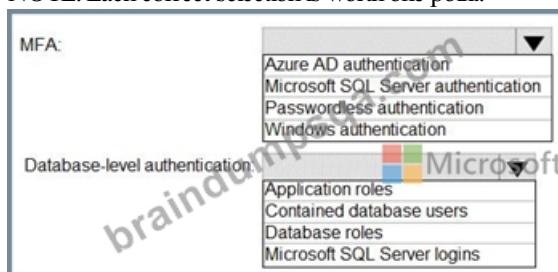

NEW QUESTION # 289

You have an Azure subscription that is linked to a hybrid Azure Active Directory (Azure AD) tenant. The subscription contains an Azure Synapse Analytics SQL pool named Pool1.

You need to recommend an authentication solution for Pool1. The solution must support multi-factor authentication (MFA) and database-level authentication.

Which authentication solution or solutions should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 290

You configure version control for an Azure Data Factory instance as shown in the following exhibit.

Connections

Git repository

Linked services

Integration runtimes

Azure Purview (Preview)

Source control

Git configuration

ARM template

Parameterization template

Author

Triggers

Global parameters

Security

Customer managed key

Managed private endpoints

Setting Disconnect

Repository type Azure DevOps Git

Azure DevOps Account CONTOSO

Project name Data

Repository name dwh_batchetl

Collaboration branch main

Publish branch adf_publish

Root folder /

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Azure Resource Manager (ARM) templates or the pipeline assets as stored in

/

adf_publish

main

Parameterization template

A Data Factory Azure Resource Manager (ARM) template named contososales can be found in

/contososales

/dwh_batchetl/adf_publish/contososales

/main

Answer:

Explanation:

Azure Resource Manager (ARM) templates or the pipeline assets as stored in

/

adf_publish

main

Parameterization template

A Data Factory Azure Resource Manager (ARM) template named contososales can be found in

/contososales

NEW QUESTION # 291

You configure version control for an Azure Data Factory instance as shown in the following exhibit.

Connections
Linked services
Integration runtimes
Azure Purview (Preview)
Source control
Git configuration
ARM template
Parameterization template
Author
Triggers
Global parameters
Security
Customer managed key
Managed private endpoints

Git repository
Git repository information associated with your data factory. CI/CD best practices

Setting Disconnect

Repository type Azure DevOps Git

Azure DevOps Account CONTOSO

Project name Data

Repository name dwh_batchetl

Collaboration branch main

Publish branch adf_publish

Root folder /

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Azure Resource Manager (ARM) templates for the pipeline assets as stored in

A Data Factory Azure Resource Manager (ARM) template named contososales can be found in

/adf_publish/main/Parameterization template

/contososales/dwh_batchetl/adf_publish/contososales/main

Answer:

Explanation:

Azure Resource Manager (ARM) templates for the pipeline assets as stored in

/adf_publish/main/Parameterization template

A Data Factory Azure Resource Manager (ARM) template named contososales can be found in

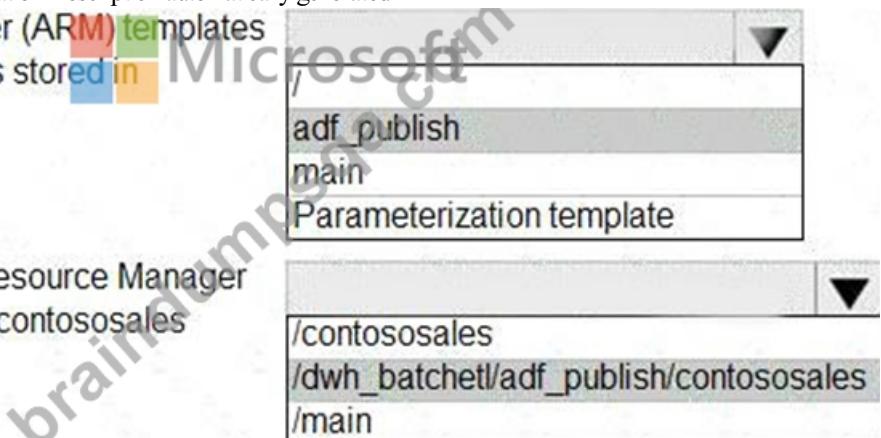

/contososales/dwh_batchetl/adf_publish/contososales/main

Explanation

Graphical user interface, text, application Description automatically generated

Azure Resource Manager (ARM) templates

for the pipeline assets as stored in

A Data Factory Azure Resource Manager (ARM) template named contososales can be found in

Box 1: adf_publish

By default, data factory generates the Resource Manager templates of the published factory and saves them into a branch called adf_publish. To configure a custom publish branch, add a publish_config.json file to the root folder in the collaboration branch. When publishing, ADF reads this file, looks for the field publishBranch, and saves all Resource Manager templates to the specified location. If the branch doesn't exist, data factory will automatically create it. An example of what this file looks like is below:

```
{  
  "publishBranch": "factory/adf_publish"  
}
```

Box 2: /dwh_batchetl/adf_publish/contososales

RepositoryName: Your Azure Repos code repository name. Azure Repos projects contain Git repositories to manage your source code as your project grows. You can create a new repository or use an existing repository that's already in your project.

<https://docs.microsoft.com/en-us/azure/data-factory/source-control>

NEW QUESTION # 292

You have an Azure subscription.

You need to deploy an Azure SQL database by using a BACPAC file.

Which command should you run?

- A. az sql db op
- B. az sql db copy
- C. **az sql db import**
- D. az sql db create

Answer: C

Explanation:

Import a BACPAC file into a database in SQL Database using the Azure CLI Example:

echo "Importing sample database from \$container to \$database..."

```
az sql db import --admin-password $password --admin-user $login --storage-key $key --storage-key-type StorageAccessKey --storage-uri
```

```
https://$storage.blob.core.windows.net/$container/$bacpac --name $database --resource-group $resourceGroup --server $server
```
