

Palo Alto Networks CloudSec-Pro Test Testking & Trustworthy CloudSec-Pro Exam Torrent

BTW, DOWNLOAD part of Test4Cram CloudSec-Pro dumps from Cloud Storage: <https://drive.google.com/open?id=1XZIdCptJL4pOzpPPgRZxYWzO2iwJggqe>

Using CloudSec-Pro exam prep is an important step for you to improve your soft power. I hope that you can spend a little time understanding what our study materials have to attract customers compared to other products in the industry. CloudSec-Pro exam dumps have a higher pass rate than products in the same industry. If you want to pass CloudSec-Pro Certification, then it is necessary to choose a product with a high pass rate. Our study materials guarantee the pass rate from professional knowledge, services, and flexible plan settings. According to user needs, CloudSec-Pro exam prep provides everything possible to ensure their success.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including operation team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI• ML and threat intelligence support incident response, categorization, and prioritization.
Topic 2	<ul style="list-style-type: none">• Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 3	<ul style="list-style-type: none">• Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.
Topic 4	<ul style="list-style-type: none">• Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.
Topic 5	<ul style="list-style-type: none">• Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI• CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.

Pass Guaranteed 2026 Fantastic Palo Alto Networks CloudSec-Pro Test Testking

Test4Cram can satisfy the fundamental demands of candidates with concise layout and illegible outline of our CloudSec-Pro exam questions. We have three versions of CloudSec-Pro study materials: the PDF, the Software and APP online and they are made for different habits and preference of you, Our PDF version of CloudSec-Pro Practice Engine is suitable for reading and printing requests. And i love this version most also because that it is easy to take with and convenient to make notes on it.

Palo Alto Networks Cloud Security Professional Sample Questions (Q180-Q185):

NEW QUESTION # 180

A customer does not want alerts to be generated from network traffic that originates from trusted internal networks. Which setting should you use to meet this customer's request?

- A. Trusted Login IP Addresses
- B. Anomaly Trusted List
- C. Enterprise Alert Disposition
- D. Trusted Alert IP Addresses

Answer: D

Explanation:

B --> Anomaly Trusted List-Exclude trusted IP addresses when conducting tests for PCI compliance or penetration testing on your network. Any addresses included in this list do not generate alerts against the Prisma Cloud Anomaly Policies that detect unusual network activity such as the policies that detect internal port scan and port sweep activity, which are enabled by default. C --> Trusted Alert IP Addresses-If you have internal networks that connect to your public cloud infrastructure, you can add these IP address ranges (or CIDR blocks) as trusted ... Prisma Cloud default network policies that look for internet exposed instances also do not generate alerts when the source IP address is included in the trusted IP address list and the account hijacking anomaly policy filters out activities from known IP addresses. Also, when you use RQL to query network traffic, you can filter out traffic from known networks that are included in the trusted IP address list.

For a customer who does not want alerts to be generated from network traffic originating from trusted internal networks, the appropriate setting is C. Trusted Alert IP Addresses. This setting allows for specifying certain IP addresses as trusted, meaning alerts will not be triggered by activities from these IPs, ensuring that internal network traffic is not flagged as potentially malicious.

NEW QUESTION # 181

Given the following audit event activity snippet:

```
{
  "payload": {
    "requestMetadata": {
      "callerSuppliedUserAgent": "google-load-sdk gcloud/274.0.1 command/gcloud.compute.firewall-rules.delete invocation-id/edda7aa325264545a4322f516ec15791 environment/None environment/version/None interactive/False from-script/False python/2.7.15 term/ (Linux 4.14.186-146.268.amzn2.x86_64), gzip(gfe)",
      "callerIp": "52.87.62.40"
    },
    "request": {
      "@type": "type.googleapis.com/compute.firewalls.delete"
    }
  }
}
```

Which RQL will be triggered by the audit event?

- A)
 - B)
 - C)
 - D)
- A. Option A
 - B. Option B
 - C. Option C
 - D. Option D

Answer: D

NEW QUESTION # 182

A customer has serverless functions that are deployed in multiple clouds.

Which serverless cloud provider is covered by "overly permissive service access" compliance check?

- A. AWS
- B. Alibaba
- C. Azure
- D. GCP

Answer: A

Explanation:

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/compliance/serverless.html>

The serverless cloud provider covered by the "overly permissive service access" compliance check is AWS (Amazon Web Services). AWS Lambda, which is the serverless computing platform provided by AWS, may have functions that are assigned more permissions than they require to perform their operations, leading to security risks.

In the context of CSPM tools, such as Prisma Cloud, checks for overly permissive service access would typically include examining the policies attached to AWS Lambda functions to ensure that they adhere to the principle of least privilege. Such checks help identify and rectify overly broad permissions that could potentially be exploited by attackers.

The reference for this can be found in AWS best practices for Lambda security, which emphasize the importance of granting minimal privileges necessary for the Lambda function to perform its tasks, thereby reducing the potential attack surface.

NEW QUESTION # 183

The development team wants to block Cross Site Scripting attacks from pods in its environment. How should the team construct the CNAF policy to protect against this attack?

- A. create a Host CNAF policy, targeted at a specific resource, check the box for XSS attack protection, and set the action to "prevent".
- B. create a Container CNAF policy, targeted at a specific resource, check the box for XSS attack protection, and set the action to alert.
- C. create a Container CNAF policy, targeted at a specific resource, and they should set "Explicitly allowed inbound IP sources" to the IP address of the pod.
- D. create a Container CNAF policy, targeted at a specific resource, check the box for XSS protection, and set the action to prevent.

Answer: D

Explanation:

To protect pods in an environment from Cross-Site Scripting (XSS) attacks, the development team should create a Container Cloud Native Application Firewall (CNAF) policy. This policy should be targeted at the specific resource (e.g., a particular pod or set of pods), with the option for XSS protection checked, and the action set to "prevent." This configuration ensures that any XSS attacks directed at the targeted containers are effectively blocked.

NEW QUESTION # 184

A customer has multiple violations in the environment including:

User namespace is enabled

An LDAP server is enabled

SSH root is enabled

Which section of Console should the administrator use to review these findings?

- A. Compliance
- B. Radar
- C. Vulnerabilities
- D. Manage

Answer: A

Explanation:

The correct section of the Console that the administrator should use to review findings such as "User namespace is enabled", "An LDAP server is enabled", and "SSH root is enabled" is "Compliance".

The "Compliance" section in CSPM tools like Prisma Cloud provides an overview of the current compliance posture against various regulatory standards and best practices. It can help identify configurations that do not adhere to best practices or that may violate compliance requirements, such as enabling the user namespace, which could be a security risk, or having an LDAP server and SSH root enabled, which may not comply with certain security standards.

Reference to the use of the "Compliance" section can be found in CSPM documentation, where it details how compliance checks are used to assess the security and configuration of cloud resources against established benchmarks and standards, allowing organizations to maintain compliance and improve their security posture.

NEW QUESTION # 185

.....

If you are on the bus, you can choose the APP version of CloudSec-Pro training engine. On one hand, after being used for the first time in a network environment, you can use it in any environment. The APP version of CloudSec-Pro Study Materials can save you traffic. And on the other hand, the APP version of CloudSec-Pro exam questions can be applied to all kinds of electronic devices, so that you can practice on the IPAD or phone.
