## Huawei HCSA-Presales-Storage V4.0 Sample Questions (Q229-Q234):

### NEW QUESTION # 229

Compared with scale-out storage, what are the characteristics of centralized storage? (Choose all that apply.)

- A. Dedicated hardware with higher reliability
- B. Support for scale-up and scale-out
- C. Support for multiple network connection protocols
- D. Closed-source software system

**Answer: A,D**

Explanation:

Centralized storage typically uses a closed-source software system, limiting customization and integration options compared to open or modular solutions.

It relies on dedicated hardware designed for higher reliability, ensuring stable and consistent performance in enterprise environments.

### NEW QUESTION # 230

Which of the following statements are correct about multi-tenancy of object storage? (Choose all that apply.)

- A. Multi-tenancy enables multiple departments or services to share one storage system.
- B. Multiple tenants share the same storage pool, improving resource utilization.
- C. A tenant can view the data of another tenant.
- D. Each tenant has an independent capacity quota policy and performance QoS policy. The performance and capacity between tenants do not affect each other.

**Answer: A,B,D**

Explanation:

Multiple tenants share the same storage pool, which increases resource utilization.

Multi-tenancy allows different departments or services to use a single storage system.

Each tenant has independent policies for capacity and performance, ensuring that the resources and performance of one tenant do not impact others.

### NEW QUESTION # 231

Which of the following topologies are supported by Huawei 3DC (Three-Data-Center) DR solution? (Select all that apply)

- A. Parallel network
- B. Cascading network
- C. DR Star network

**Answer: A,B,C**

Explanation:

Huawei's 3DC (Three-Data-Center) solution is designed for high-level business continuity, typically involving a local HA site and a remote DR site. The documentation supports three main topological configurations to meet different reliability and performance needs:

Cascading Network (Option B): Site A (Production) replicates to Site B (Local DR), and Site B then replicates to Site C (Remote DR). This reduces the pressure on the production site (Site A) as it only manages one replication link.

Parallel Network (Option C): Site A replicates directly to both Site B and Site C simultaneously. This provides better protection for the data at Site C, but increases the load and bandwidth requirements on Site A.

DR Star Network (Option A): This is a specific variant of the multi-site protection architecture used in Huawei's HyperMetro + Remote Replication scenarios. It typically combines an active-active setup between Site A and B with an asynchronous link to Site C, ensuring that even if two sites fail, the third contains a survivable copy of the data.

#### NEW QUESTION # 232

OceanStor F V5 series are hybrid-flash storage systems.

- A. FALSE
- B. TRUE

Answer: A

#### NEW QUESTION # 233

What is the name of the multi-pathing software of Huawei storage?

- A. MPIO
- B. PowerPath
- C. UltraPath
- D. SecurePath

Answer: A
