Cisco Automating and Programming Cisco Enterprise Solutions Sample Questions (Q143-Q148):

NEW QUESTION # 143
Refer to the exhibit. The Python script fails. Which change enables the script to complete successfully?

```
#!/usr/bin/env python
import sys
def set_interfaces():
    # Create a local variable
    interfaces = ["GigabitEthernet1",
                  "GigabitEthernet2",
                  "GigabitEthernet3",
                  ]
    return (interfaces)

def main():
    set_interfaces()
    for interface in interfaces:
       print(interface)

if __name__ == '__main__'
    sys.exit(main())
```

- A. The interfaces object must be defined in the main function.
- B. An iterable object type must be used for the interfaces object.
- C. The interface object must be defined in the set_jnterfaces function.
- D. Store set_interfaces() return value in interfaces var.

Answer: D

Explanation:
The script calls set_interfaces() but does not store its return value. Therefore, the variable interfaces used in the for loop is undefined, causing a NameError. Assigning the return value to interfaces like this:
interfaces = set_interfaces()
inside the main() function will resolve the error and allow the script to execute successfully.

NEW QUESTION # 144
Refer to the exhibit. A network engineer must use the Cisco DNA Centre Intent API to create a new event subscription for

webhook notifications by using the HTTP POST method to the event/subscription API endpoint. Which code snippet must be added to the box in the code to ensure that the body of this API call is valid?

passtestking.com

- A. "subscriptionEndpoints": [
- B. "subscribeNotifications": [
- C. "subscribeDnac": [
- D. "subscriptionWbhook": [

Answer: A

Explanation:
In the Cisco DNA Center Intent API, when creating an event subscription via a POST to /dna/intent/api/v1/event/subscription, the correct key to specify the list of endpoints that should receive event notifications is "subscriptionEndpoints". This field must contain endpoint definitions including URL, method, and connector type.

NEW QUESTION # 145
A new project called "device_status" must be stored in a central Git repository called "device_status" with the first file named "device_status.py". The Git repository is created using the account python_programmer. Which set of commands inserts the project into Git?
