In today's competitive technology sector, the Microsoft AZ-305 certification is a vital credential. Many applicants, however, struggle to obtain up-to-date and genuine Microsoft AZ-305 exam questions in order to successfully prepare for the exam. If you find yourself in this circumstance, don't worry since TestSimulate has you covered with their real Microsoft AZ-305 Exam Questions. Let's look at the characteristics of these Designing Microsoft Azure Infrastructure Solutions test Questions and how they can help you pass the Microsoft AZ-305 certification exam on the first try.

Microsoft AZ-305 exam is an important certification for IT professionals who want to specialize in designing Azure infrastructure solutions. It is one of the two exams needed to earn the Microsoft Certified: Azure Solutions Architect Expert certification. This credential is recognized globally and validates the ability of the certified professional to design and implement secure, reliable, and scalable solutions on the Azure cloud platform.

Microsoft AZ-305 certification exam is designed for professionals who want to demonstrate their expertise in designing Microsoft Azure infrastructure solutions. Designing Microsoft Azure Infrastructure Solutions certification is intended for individuals who have experience working with Azure services and are interested in designing solutions that use these services to meet customer requirements.

## You can face the following difficulties while writing the Microsoft AZ-305 Certification Exam

The Microsoft AZ-305 Certification Exam is a difficult exam. This means that you may face some difficulties while writing the

Microsoft AZ-305 Certification Exam. Here are some of the difficulties you can face while writing the real AZ-305 Certification Exam

You will have to spend around 60 minutes writing the Microsoft AZ-305 Certification Exam. This is a very long time to spend in one sitting. You will have to manage your time properly to avoid this. You will have to face a language barrier while writing the Microsoft AZ-305 Certification Exam. This means that you will have to learn some basic English phrases and expressions to pass the Microsoft AZ-305 Certification Exam.

You will have to prepare yourself well before writing the Microsoft AZ-305 Certification Exam. This means that you will have to study a lot of topics in the Microsoft AZ-305 Certification Exam. You will have to study all the topics related to the Microsoft AZ-305 Certification Exam. You will have to pass the Microsoft AZ-305 Certification Exam without having any experience. You will have to work hard to prep yourself for the Microsoft AZ-305 Certification Exam.

You will have to face some technical difficulties while writing the Microsoft AZ-305 Certification Exam. This means that you will have to learn how to use the different tools to write the Microsoft AZ-305 Certification Exam. You will have to study the different software and tools to write the Microsoft AZ-305 Certification Exam. But don't worry Microsoft **AZ-305 Dumps** of the TestSimulate will help you to get rid of these difficulties and will give you the best results in the Microsoft AZ-305 Certification Exam.

## Microsoft - AZ-305 - The Best Valid Designing Microsoft Azure Infrastructure Solutions Study Guide

After we develop a new version, we will promptly notify you. At AZ-305, you have access to the best resources in the industry. We guarantee that you absolutely don't need to spend extra money to buy other products. AZ-305 practice materials will definitely make you feel value for money. If you are really in doubt, you can use our trial version of our AZ-305 Exam Questions first. We believe that you will definitely make a decision immediately after use!

## Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q226-Q231):

### NEW QUESTION # 226

You plan to develop a new app that will store business critical data. The app must meet the following requirements:

- \* Prevent new data from being modified for one year.
- \* Maximize data resiliency.
- \* Minimize read latency.

What storage solution should you recommend for the app? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

### NEW QUESTION # 227

You have several Azure App Service web apps that use Azure Key Vault to store data encryption keys.

Several departments have the following requests to support the web app:

Which service should you recommend for each department's request? To answer, configure the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Graphical user interface, text, application Description automatically generated

### NEW QUESTION # 228

You plan to deploy an Azure web app named App1 that will use Azure Active Directory (Azure AD) authentication. App1 will be accessed from the internet by the users at your company. All the users have computers that run Windows 10 and are joined to Azure AD.

You need to recommend a solution to ensure that the users can connect to App1 without being prompted for authentication and can access App1 only from company-owned computers.

What should you recommend for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation:

Box 1: An Azure AD app registration

Azure active directory (AD) provides cloud based directory and identity management services. You can use azure AD to manage users of your application and authenticate access to your applications using azure active directory.

You register your application with Azure active directory tenant.

Box 2: A conditional access policy

Conditional Access policies at their simplest are if-then statements, if a user wants to access a resource, then they must complete an action.

By using Conditional Access policies, you can apply the right access controls when needed to keep your organization secure and stay out of your user's way when not needed.

Reference:

<https://codingcanvas.com/using-azure-active-directory-authentication-in-your-web-application/>

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/overview>

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/walkthrough-register-app-azure-active-dire>

"After consenting to use their Dataverse account with the ISV's application, end users can connect to Dataverse environment from external application. The consent form is not displayed again to other users after the first user who has already consented to use the ISV's app. Apps registered in Azure Active Directory are multi-tenant, which implies that other Dataverse users from other tenant can connect to their environment using the ISV's app."

### NEW QUESTION # 229

You need to design an Azure policy that will implement the following functionality:

- \* For new resources, assign tags and values that match the tags and values of the resource group to which the resources are deployed.

- \* For existing resources, identify whether the tags and values match the tags and values of the resource group that contains the resources.

- \* For any non-compliant resources, trigger auto-generated remediation tasks to create missing tags and values.

The solution must use the principle of least privilege.

What should you include in the design? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation:

Box 1: Modify

Modify is used to add, update, or remove properties or tags on a resource during creation or update. A common example is updating tags on resources such as costCenter. Existing non-compliant resources can be remediated with a remediation task. A single Modify rule can have any number of operations.

Box 2: A managed identity with the Contributor role

Managed identity

How remediation security works: When Azure Policy runs the template in the deployIfNotExists policy definition, it does so using a managed identity. Azure Policy creates a managed identity for each assignment, but must have details about what roles to grant the managed identity.

Contributor role

The Contributor role grants the required access to apply tags to any entity.

<https://docs.microsoft.com/en-us/azure/governance/policy/how-to/remediate-resources>

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/tag-resources>

<https://docs.microsoft.com/en-us/azure/governance/policy/concepts/effects#modify>

### NEW QUESTION # 230

A company has an Azure subscription that contains two Azure AD administrative user accounts and two virtual machines. You have to ensure that both administrators are notified when more than five events are added to the security log of both virtual machines during a period of 120 seconds.

The solution needs to minimize administrative tasks.

Which of the following would you create for this requirement?

- A. two action groups and one alert rule
- B. two action groups and two alert rules
- **C. one action group and one alert rule**
- D. five action groups and one alert rule

**Answer: C**

Explanation:

To alert both administrators about events on both VMs, you need to create one action group with the email ids of both administrators.

In the Notifications section of the action group, you can provide the emails ids of the administrators.

Then you need to create one alert rule for the notification of events.
