## 最有效的最新Plat-Admn-202題庫資源，真實還原Salesforce Plat-Admn-202考試內容

想更快的通過Plat-Admn-202認證考試嗎？快速拿到該證書嗎？PDFExamDumps考古題可以幫助您，幾乎包含了Plat-Admn-202考試所有知識點，由專業的認證專家團隊提供100%正確的答案。他們一直致力于為考生提供最好的學習資料，以確保您獲得的是最有價值的Salesforce Plat-Admn-202考古題。我們不斷的更新Plat-Admn-202考題資料，以保證其高通過率，是大家值得選擇的最新、最準確的Salesforce Plat-Admn-202學習資料產品。

## 最新的 Salesforce Developer Plat-Admn-202 免費考試真題 (Q111-Q116):

### 問題 #111

An app builder needs to deploy a new account detail page layout from sandbox to production.

Which three components should an app builder include in the Change Set to ensure it deploys successfully and visually as expected?

Choose 3 answers

- A. Custom fields
- B. Custom actions
- C. Detail page layout
- D. System administrator profile
- E. Lightning App Builder

答案： A,B,C

解題說明：

To deploy a new account detail page layout from sandbox to production, an app builder should include three components in the change set:

Detail page layout: The page layout defines the arrangement of fields, buttons, related lists, and other components on a record detail or edit page. It also controls which fields are required or read-only for users. Source Custom fields: Custom fields are fields that are created by users to store additional information on standard or custom objects. Custom fields can have different data types, such as text, number, date, picklist, etc. Source Custom actions: Custom actions are actions that are created by users to extend the functionality of standard or custom objects. Custom actions can be global or object-specific, and they can invoke different tools such as Lightning components, Visualforce pages, flows, etc. [Source]

### 問題 #112

Cloud Kicks wants to display the number of Opportunity records associated with each Account. Which solution should be used?

- A. Lookup field
- B. Roll-up summary field
- C. AppExchange offering
- D. Formula field

答案： B

解題說明：

Use a Roll-Up Summary field on Account to count the related Opportunity records. Salesforce roll-up summary fields can calculate values from related records, and the COUNT summary type totals the number of related records. Trailhead also gives the Account and Opportunity example for roll-up summaries.

A formula field cannot count child records by itself. A lookup field only creates a relationship. AppExchange is unnecessary for this standard use case.

### 問題 #113

Universal Containers has a requirement that an opportunity should have a field showing the value of its associated account's billing state. This value should be static after the opportunity has been created.

- A. Flow
- B. Roll-up summary field
- C. Apex
- D. Formula field

答案： A

解題說明：

The requirement is to copy the parent Account's Billing State onto a custom field on Opportunity at the moment the Opportunity is created, and keep that value static thereafter.

Why not Formula (B): A formula would always recalculate, so the value would change if the Account's Billing State later changes.Exact Extract: "Formula fields are read-only fields that automatically recalculate their values when any referenced fields change." - Salesforce Help | Formula Fields Why not Roll-Up Summary (A): Roll-up summary fields only summarize child records onto a master (parent) record; they do not copy values from a parent (Account) down to a child (Opportunity), and they can't summarize a text/state value.Exact Extract: "A roll-up summary field calculates values from related records, such as those in a related list, on a master record." - Salesforce Help | Roll-Up Summary Fields Why Flow (C) is correct: A Record-Triggered Flow on Opportunity (when a record is created) can set a field value by referencing the related Account (e.g., Opportunity.Account.BillingState) and writing it into a dedicated "snapshot" field (e.g., Billing State at Create\_\_c). Because this is a one-time assignment on create, the value remains static unless intentionally updated by further automation.Exact Extract 1: "Use Flow Builder to automate business processes by collecting data and performing actions in your Salesforce org." - Salesforce Help | Flow

BuilderExact Extract 2: "Record-triggered flows launch when a record is created, updated, or deleted, and can update fields on the triggering record." - Salesforce Help | Record-Triggered Flows Why Apex (D) is not preferred: While Apex could do the same copy-on-create, Salesforce's recommended approach is to use declarative automation (Flow) when possible.Exact Extract: "Before considering Apex, evaluate whether your solution can be implemented with declarative tools such as Flow." - Salesforce Architect Guidance | Clicks, Not Code Implementation note (for clarity): Create a custom text field on Opportunity, e.g., Billing State at Create (Billing\_State\_at\_Create\_\_c). Build a Record-Triggered Flow:

Trigger: Opportunity - "A record is created"

Get or use the related Account from the \$Record.AccountId relationship

Update the new Opportunity field with Account.BillingState

Do not run the flow on updates

#### 問題 #114

When a sales rep submits an account for approval, Universal Containers Wants the user to answer additional questions via a popup window to populate Additional record fields. What should an app builder use to achieve the desired result?

- A. Custom Lightning component
- **B. Custom button and Flow**
- C. Custom object
- D. Visualforce page

答案: **B**

解題說明:

A Screen Flow is the best declarative tool when the user must answer questions through a guided UI and use those answers to update record fields. Salesforce documents that screen flows provide a UI that guides users through a business process, and they can be launched from quick actions or Lightning pages.

A custom button or action can launch the flow, collect the extra approval-related information, update the Account fields, and then continue the approval submission logic.

Why not others:

A . Custom object only stores data; it does not provide the popup/question flow.

B . Visualforce could be custom-coded, but Flow is the declarative App Builder solution.

D . Custom Lightning component requires development and is not the best declarative answer.

#### 問題 #115

The Recruiting team at AW Computing captures the job acceptance and date of hire of A candidate on the Job Application custom object. Once the candidate accepts The recruiter's job offer, the date of hire should be entered and not be changed on Subsequent record edits. Which validation formula should the app builder use?

- A. (ISBLANK (Job\_Accepted\_\_c) NOT (ISCHANGED (Hire\_Date\_\_c))
- B. NOT (ISBLANK (Job\_Accepted\_\_c)) || ISCHANGED (Hire\_Date\_\_c)
- **C. NOT (ISBLANK (Job\_Accepted\_\_c)) || NOT (ISCHANGED (Hire\_Date\_\_c))**
- D. (ISBLANK (Job\_Accepted\_\_c) || NOT (ISCHANGED (Hire\_Date\_\_c)))

答案: **C**

解題說明:

The validation rule must fire when two things are true:

Job\_Accepted\_\_c is already populated

Hire\_Date\_\_c is being changed

Salesforce's ISCHANGED() function returns true when a field's value changes from its previous value, and formula functions can be used in validation rules.

So this formula prevents users from changing the hire date after the candidate has accepted the offer:

NOT(ISBLANK(Job\_Accepted\_\_c)) && ISCHANGED(Hire\_Date\_\_c)

Why others are incorrect:

The other options either use the wrong logical operator or validate the opposite condition. A validation rule must return TRUE only when Salesforce should block the save.

## 問題 #116

.....

言與行的距離到底有多遠？關鍵看人心，倘使心神明淨，意志堅強，則近在咫尺，垂手可及。我想你應該就是這樣的人吧。既然選擇了要通過Salesforce的Plat-Admn-202認證考試，當然就得必須通過，PDFExamDumps Salesforce的Plat-Admn-202考試培訓資料是幫助通過考試的最佳選擇，也是表現你意志堅強的一種方式，PDFExamDumps網站提供的培訓資料在互聯網上那是獨一無二的品質好，如果你想要通過Salesforce的Plat-Admn-202考試認證，就購買PDFExamDumps Salesforce的Plat-Admn-202考試培訓資料。
