

Guaranteed ADA-C02 Questions Answers | ADA-C02 Exam Learning

2026 Latest Lead2Passed ADA-C02 PDF Dumps and ADA-C02 Exam Engine Free Share: <https://drive.google.com/open?id=12vcMyvILjzDgB7zntgC8AgVebTxthQL4>

The contents of ADA-C02 exam torrent was all compiled by experts through the refined off textbooks. Hundreds of experts simplified the contents of the textbooks, making the lengthy and complex contents easier and more understandable. With ADA-C02 study tool, you only need 20-30 hours of study before the exam. ADA-C02 Guide Torrent provides you with a brand-new learning method. In the course of doing questions, you can memorize knowledge points. You no longer need to look at the complicated expressions in the textbook.

Snowflake ADA-C02 Exam Syllabus Topics:

Section	Weight	Objectives
Account Management and Security	25%	- Security and governance management - Account management and billing - User management and authentication - Role-Based Access Control (RBAC)
Virtual Warehouses	20%	- Virtual warehouse creation and management - Warehouse performance optimization - Warehouse sizing and scaling - Resource monitors
Data Management	20%	- Database object management - Data sharing and replication - Data loading and unloading - Time Travel and Fail-safe
Data Protection and Disaster Recovery	15%	- Backup and restore procedures - Snowflake Marketplace - Disaster recovery planning - Data replication
Performance and Monitoring	20%	- Query history and profiling - Clustering keys - Query performance optimization - Resource monitoring and management

2026 Snowflake Newest Guaranteed ADA-C02 Questions Answers

With the Snowflake ADA-C02 PDF questions file, you can prepare for the Snowflake ADA-C02 test on the go since the format is portable and works with all smart devices. The Snowflake ADA-C02 probable exam questions in PDF save you time so that you do not have to go through sleepless nights owing to a tight daily routine.

Snowflake SnowPro Advanced Administrator ADA-C02 Sample Questions (Q25-Q30):

NEW QUESTION # 25

A team of developers created a new schema for a new project. The developers are assigned the role DEV_TEAM which was set up using the following statements:

```
USE ROLE SECURITYADMIN;
```

```
CREATE ROLE DEV_TEAM;
```

```
GRANT USAGE, CREATE SCHEMA ON DATABASE DEV_DB01 TO ROLE DEV_TEAM;
```

```
GRANT USAGE ON WAREHOUSE DEV_WH TO ROLE DEV_TEAM;
```

Each team member's access is set up using the following statements:

```
USE ROLE SECURITYADMIN;
```

```
CREATE ROLE JDOE_PROFILE;
```

```
CREATE USER JDOE LOGIN_NAME = 'JDOE' DEFAULT ROLE='JDOE_PROFILE';
```

```
GRANT ROLE JDOE_PROFILE TO USER JDOE;
```

```
GRANT ROLE DEV_TEAM TO ROLE JDOE_PROFILE;
```

New tables created by any of the developers are not accessible by the team as a whole.

How can an Administrator address this problem?

- A. Assign usage privilege on the virtual warehouse DEV_WH to the role JDOE_PROFILE.
- **B. Set up future grants on the newly-created schemas.**
- C. Assign ownership privilege to DEV_TEAM on the newly-created schema.
- D. Set up the new schema as a managed-access schema.

Answer: B

Explanation:

Future grants allow privileges to be automatically granted on objects created in the future within a schema. By configuring future grants on the schema, privileges such as SELECT can automatically be granted to the DEV_TEAM role whenever new tables are created. This ensures that all developers using the DEV_TEAM role can access newly created tables without requiring manual privilege grants after each table creation.

NEW QUESTION # 26

The following SQL command was executed:

```
Use role SECURITYADMIN;
```

```
Grant ownership
```

```
On future tables
```

```
In schema PROD.WORKING
```

```
To role PROD_WORKING_OWNER;
```

```
Grant role PROD_WORKING_OWNER to role SYSADMIN;
```

```
Use role ACCOUNTADMIN;
```

```
Create table PROD.WORKING.XYZ (value number);
```

Which role(s) can alter or drop table XYZ?

- A. Only the PROD_WORKING_OWNER role can alter or drop table XYZ.
- B. SECURITYADMIN, SYSADMIN, and ACCOUNTADMIN can alter or drop table XYZ.
- C. Because ACCOUNTADMIN created the table, only the ACCOUNTADMIN role can alter or drop table XYZ.
- **D. PROD_WORKING_OWNER, ACCOUNTADMIN, and SYSADMIN can alter or drop table XYZ.**

Answer: D

Explanation:

Although ACCOUNTADMIN created the table, the future ownership grant ensures ownership of new tables in PROD.WORKING is assigned to PROD_WORKING_OWNER. Since PROD_WORKING_OWNER was granted to SYSADMIN, both roles, along with ACCOUNTADMIN (which always has ultimate rights), can alter or drop the table XYZ.

NEW QUESTION # 27

A user with the proper role issues the following commands when setting up and activating network policies:

```
CREATE OR REPLACE NETWORK POLICY foo_policy
ALLOWED_IP_LIST = ('1.1.1.0/24', '2.2.2.0/24', '3.3.3.0/24')
BLOCKED_IP_LIST = ('1.1.1.1')
COMMENT = 'Account level policy';
ALTER ACCOUNT SET NETWORK_POLICY=foo_policy;
CREATE OR REPLACE NETWORK POLICY bar_policy
ALLOWED_IP_LIST = ('3.3.3.0/24')
BLOCKED_IP_LIST = ('3.3.3.10')
COMMENT = 'user level policy';
ALTER USER user1 SET NETWORK_POLICY=BAR_POLICY;
Afterwards, user1 attempts to log in to Snowflake from IP address 3.3.3.10.
Will the login be successful?
```

- A. Yes, because 3.3.3.10 is found in the ALLOWED_IP_LIST of bar_policy.
- **B. No, because 3.3.3.10 is found in the BLOCKED_IP_LIST of bar_policy.**
- C. Yes, because 3.3.3.10 is found in the ALLOWED_IP_LIST of foo_policy.
- D. No, because 3.3.3.10 is not found in the ALLOWED_IP_LIST of foo_policy.

Answer: B

Explanation:

Although 3.3.3.10 is in the ALLOWED_IP_LIST, it is also explicitly listed in the BLOCKED_IP_LIST of the user-level policy (bar_policy). Blocked IPs always take precedence over allowed IPs in Snowflake network policies, so the login attempt will fail.

NEW QUESTION # 28

An Administrator needs to configure a virtual warehouse in Snowflake for a new use case with these details:

1. There will be 50-100 concurrent users running reports
2. Minimize costs based on the number of active users at a given time
3. The virtual warehouse should suspend and resume automatically based on user activity

Which configuration will meet these requirements?

- A. create or replace warehouse reporting_wh
warehouse_size = xxxlarge
auto_suspend = 60
auto_resume = true;
- B. create or replace warehouse reporting_wh
warehouse_size = xxxlarge
max_cluster_count = 10
scaling_policy = standard
auto_suspend = 600
auto_resume = false;
- C. create or replace warehouse reporting_wh
warehouse_size = medium
auto_suspend = 600
auto_resume = true;
- **D. create or replace warehouse reporting_wh
warehouse_size = medium
max_cluster_count = 10
scaling_policy = standard
auto_suspend = 600
auto_resume = true;**

Answer: D

Explanation:

Supporting 50-100 concurrent users requires a multi-cluster warehouse so compute resources can scale to handle high concurrency. Setting a maximum cluster count allows Snowflake to automatically add clusters when query demand increases and reduce them

when demand drops, which helps minimize cost based on active users. Enabling auto_suspend and auto_resume ensures the warehouse automatically stops when idle and restarts when queries arrive, further optimizing cost and operational efficiency.

NEW QUESTION # 29

A Snowflake customer is experiencing higher costs than anticipated while migrating their data warehouse workloads from on-premises to Snowflake. The migration workloads have been deployed on a single warehouse and are characterized by a large number of small INSERTS rather than bulk loading of large extracts. That single warehouse has been configured as a single cluster, 2XL because there are many parallel INSERTS that are scheduled during nightly loads.

How can the Administrator reduce the costs, while minimizing the overall load times, for migrating data warehouse history?

- A. There should be another 2XL warehouse deployed to handle a portion of the load queries.
- B. The 2XL warehouse should be changed to 4XL to increase the number of threads available for parallel load queries.
- C. The warehouse should be kept as a SMALL or XSMALL and configured as a multi-cluster warehouse to handle the parallel load queries.
- D. The INSERTS should be converted to several tables to avoid contention on large tables that slows down query processing.

Answer: C

Explanation:

For many small, parallel INSERTS, using a multi-cluster warehouse with smaller size (SMALL or XSMALL) allows more concurrent queries to run efficiently and reduces costs compared to a single large warehouse. This configuration improves concurrency without unnecessary compute expense.

NEW QUESTION # 30

.....

Now you do not need to worry about the relevancy and top standard of Lead2Passed SnowPro Advanced Administrator ADA-C02 (ADA-C02) exam questions. These Snowflake ADA-C02 dumps are designed and verified by qualified SnowPro Advanced Administrator ADA-C02 (ADA-C02) exam trainers. Now you can trust Lead2Passed SnowPro Advanced Administrator ADA-C02 (ADA-C02) practice questions and start preparation without wasting further time.
