

# Amazon MLS-C01 Verified Answers & New MLS-C01 Dumps Ebook

P.S. Free 2026 Amazon MLS-C01 dumps are available on Google Drive shared by RealExamFree: <https://drive.google.com/open?id=1MrTxlRBkcO5B8pwobJ3lrba2zlmt8ao>

Have similar features to the desktop-based exam simulator contains actual Amazon MLS-C01 Practice Test that will help you grasp every topic Compatible with every operating system such as Mac, Linus, iOS, Windows, and Android Works properly on Google chrome, Internet explorer, Microsoft Edge, Opera, etc. Does not require any special plugins to operate creates an exam atmosphere making candidates more confident. Keep track of your progress with self-analysis Points out mistakes at the end of every attempt.

To take the Amazon MLS-C01 Exam, candidates must first pass the AWS Certified Cloud Practitioner or AWS Certified Solutions Architect Associate exam. MLS-C01 exam consists of 65 multiple-choice and multiple-response questions and must be completed in 180 minutes. MLS-C01 exam is available in several languages, including English, Japanese, Korean, and Simplified Chinese. Upon passing the exam, candidates will receive an AWS Certified Machine Learning – Specialty certification, which is valid for three years. AWS Certified Machine Learning - Specialty certification demonstrates to employers and clients that the individual has the skills and knowledge needed to design, implement, and maintain machine learning solutions on the AWS platform.

## New Amazon MLS-C01 Dumps Ebook & Instant MLS-C01 Discount

In today's society, many people are busy every day and they think about changing their status of profession. They want to improve their competitiveness in the labor market, but they are worried that it is not easy to obtain the certification of MLS-C01. Our study tool can meet your needs. Once you use our MLS-C01 exam materials, you don't have to worry about consuming too much time,

because high efficiency is our great advantage. You only need to spend 20 to 30 hours on practicing and consolidating of our MLS-C01 learning material, you will have a good result. After years of development practice, our MLS-C01 test torrent is absolutely the best. You will embrace a better future if you choose our MLS-C01 exam materials.

The AWS Certified Machine Learning - Specialty Exam covers a wide range of topics related to machine learning, such as data preparation and feature engineering, model training and evaluation, deployment and implementation, and monitoring and troubleshooting. Candidates who pass MLS-C01 exam are expected to have a deep understanding of machine learning concepts and techniques, as well as the ability to apply them to real-world scenarios using AWS services.

The AWS Certified Machine Learning - Specialty certification exam covers a wide range of topics, including exploring data, building and training ML models, deploying models, and managing and optimizing ML solutions. MLS-C01 Exam also tests the candidate's knowledge of machine learning algorithms, deep learning, neural networks, and other related technologies. Passing this certification exam requires a deep understanding of AWS ML services, including Amazon SageMaker, Amazon Rekognition, and Amazon Comprehend.

## **Amazon AWS Certified Machine Learning - Specialty Sample Questions (Q21-Q26):**

### **NEW QUESTION # 21**

A Machine Learning Specialist is creating a new natural language processing application that processes a dataset comprised of 1 million sentences. The aim is to then run Word2Vec to generate embeddings of the sentences and enable different types of predictions - Here is an example from the dataset

"The quck BROWN FOX jumps over the lazy dog "

Which of the following are the operations the Specialist needs to perform to correctly sanitize and prepare the data in a repeatable manner? (Select THREE)

- A. **Correct the typography on "quck" to "quick."**
- B. One-hot encode all words in the sentence
- C. **Normalize all words by making the sentence lowercase**
- D. **Perform part-of-speech tagging and keep the action verb and the nouns only**
- E. Tokenize the sentence into words.
- F. Remove stop words using an English stopword dictionary.

**Answer: A,C,D**

### **NEW QUESTION # 22**

A data scientist uses Amazon SageMaker Data Wrangler to define and perform transformations and feature engineering on historical data. The data scientist saves the transformations to SageMaker Feature Store.

The historical data is periodically uploaded to an Amazon S3 bucket. The data scientist needs to transform the new historic data and add it to the online feature store. The data scientist needs to prepare the .....historic data for training and inference by using native integrations.

Which solution will meet these requirements with the LEAST development effort?

- A. Use AWS Lambda to run a predefined SageMaker pipeline to perform the transformations on each new dataset that arrives in the S3 bucket.
- B. **Configure Amazon EventBridge to run a predefined SageMaker pipeline to perform the transformations when a new data is detected in the S3 bucket.**
- C. Use Apache Airflow to orchestrate a set of predefined transformations on each new dataset that arrives in the S3 bucket.
- D. Run an AWS Step Functions step and a predefined SageMaker pipeline to perform the transformations on each new dataset that arrives in the S3 bucket

**Answer: B**

Explanation:

The best solution is to configure Amazon EventBridge to run a predefined SageMaker pipeline to perform the transformations when a new data is detected in the S3 bucket. This solution requires the least development effort because it leverages the native integration between EventBridge and SageMaker Pipelines, which allows you to trigger a pipeline execution based on an event rule.

EventBridge can monitor the S3 bucket for new data uploads and invoke the pipeline that contains the same transformations and feature engineering steps that were defined in SageMaker Data Wrangler. The pipeline can then ingest the transformed data into the online feature store for training and inference.

The other solutions are less optimal because they require more development effort and additional services. Using AWS Lambda or AWS Step Functions would require writing custom code to invoke the SageMaker pipeline and handle any errors or retries. Using Apache Airflow would require setting up and maintaining an Airflow server and DAGs, as well as integrating with the SageMaker API.

### NEW QUESTION # 23

A Machine Learning Specialist needs to be able to ingest streaming data and store it in Apache Parquet files for exploration and analysis. Which of the following services would both ingest and store this data in the correct format?

- A. Amazon Kinesis Data Firehose
- B. **Amazon Kinesis Data Streams**
- C. AWS DMS
- D. Amazon Kinesis Data Analytics

**Answer: B**

### NEW QUESTION # 24

A Machine Learning Specialist is using Apache Spark for pre-processing training data. As part of the Spark pipeline, the Specialist wants to use Amazon SageMaker for training a model and hosting it. Which of the following would the Specialist do to integrate the Spark application with SageMaker? (Select THREE )

- A. Compress the training data into a ZIP file and upload it to a pre-defined Amazon S3 bucket.
- B. Use the `sageMakerModel.transform` method to get inferences from the model hosted in SageMaker
- C. Convert the `DataFrame` object to a CSV file, and use the CSV file as input for obtaining inferences from SageMaker.
- D. Use the appropriate estimator from the SageMaker Spark Library to train a model.
- E. Download the AWS SDK for the Spark environment
- F. Install the SageMaker Spark library in the Spark environment.

**Answer: A,B,C**

### NEW QUESTION # 25

A real-estate company is launching a new product that predicts the prices of new houses. The historical data for the properties and prices is stored in .csv format in an Amazon S3 bucket. The data has a header, some categorical fields, and some missing values. The company's data scientists have used Python with a common open-source library to fill the missing values with zeros. The data scientists have dropped all of the categorical fields and have trained a model by using the open-source linear regression algorithm with the default parameters.

The accuracy of the predictions with the current model is below 50%. The company wants to improve the model performance and launch the new product as soon as possible.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Create an IAM role with access to Amazon S3, Amazon SageMaker, and AWS Lambda. Create a training job with the SageMaker built-in XGBoost model pointing to the bucket with the dataset. Specify the price as the target feature. Wait for the job to complete. Load the model artifact to a Lambda function for inference on prices of new houses.
- B. Create an Amazon SageMaker notebook with a new IAM role that is associated with the notebook. Pull the dataset from the S3 bucket. Explore different combinations of feature engineering transformations, regression algorithms, and hyperparameters. Compare all the results in the notebook, and deploy the most accurate configuration in an endpoint for predictions.
- C. **Create a service-linked role for Amazon Elastic Container Service (Amazon ECS) with access to the S3 bucket. Create an ECS cluster that is based on an AWS Deep Learning Containers image. Write the code to perform the feature engineering. Train a logistic regression model for predicting the price, pointing to the bucket with the dataset. Wait for the training job to complete. Perform the inferences.**
- D. Create an IAM role for Amazon SageMaker with access to the S3 bucket. Create a SageMaker AutoML job with SageMaker Autopilot pointing to the bucket with the dataset. Specify the price as the target attribute. Wait for the job to

complete. Deploy the best model for predictions.

**Answer: C**
