NEW QUESTION # 157

When a Linux host is in Reduced Functionality Mode (RFM) what telemetry and protection is still offered?

- A. The sensor provides no protection, and only collects Sensor Heart Beat events

- B. The sensor would provide protection as normal, without event telemetry
- C. The sensor would function as normal
- **D. The sensor would provide minimal protection**

Answer: D

Explanation:

When a Linux host is in Reduced Functionality Mode (RFM), the sensor would provide minimal protection. RFM is a mode that limits the sensor's functionality due to license expiration, network connectivity loss, or certificate validation failure. When a Linux sensor is in RFM, it will only provide basic prevention capabilities, such as blocking known malware hashes and preventing script execution from the /tmp directory. The sensor will not send any telemetry or detection events to the Falcon platform, and will not receive any policy or update changes from the Falcon cloud.
