

SailPoint IdentityIQ-Associate Free Brain Dumps & IdentityIQ-Associate Reliable Braindumps Book

Our IdentityIQ-Associate training dumps are deemed as a highly genius invention so all exam candidates who choose our IdentityIQ-Associate exam questions have analogous feeling that high quality our practice materials is different from other practice materials in the market. So our IdentityIQ-Associate study braindumps are a valuable invest which cost only tens of dollars but will bring you permanent reward. So many our customers have benefited form our IdentityIQ-Associate preparation quiz, so will you!

SailPoint IdentityIQ-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Governance: Addresses how access certifications are conducted and how policy violations are defined and detected across the organization.
Topic 2	<ul style="list-style-type: none">• User-Driven Requests: Explains how users submit access requests, what request types are available, and how QuickLink Populations control who can request what for whom.
Topic 3	<ul style="list-style-type: none">• Applications: Focuses on how applications and connectors are configured in IdentityIQ, including schemas, correlation, aggregation tasks, and resolving uncorrelated accounts.
Topic 4	<ul style="list-style-type: none">• Foundational Concepts: Covers the core purpose of identity security, key IdentityIQ terminology, system components, and how rules, tasks, workflows, and business modeling fit into the platform.
Topic 5	<ul style="list-style-type: none">• Provisioning: Covers how IdentityIQ provisions access, including triggering actions, provisioning policies, Lifecycle Events, and attribute synchronization.
Topic 6	<ul style="list-style-type: none">• Identity Modeling: Explains how identity data is structured and managed through IdentityCubes, identity attributes, groups, populations, and manager correlation.

Download SailPoint Certified IdentityIQ Associate Exam actual test dumps, and start your IdentityIQ-Associate exam preparation

Our website is considered to be the top test seller of IdentityIQ-Associate practice materials, and gives you the best knowledge of the content of the syllabus of IdentityIQ-Associate preparation materials. They provide you with the best possible learning prospects by using minimal effort to satisfy the results beyond your expectations. Despite the intricacies of the nominal concept, the questions of IdentityIQ-Associate Exam Questions have been made suitable whatever level you are.

SailPoint Certified IdentityIQ Associate Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

Is this displayed in the Identity Warehouse?

List of objects the user owns

- A. No
- B. Yes

Answer: B

Explanation:

Yes. The Identity Warehouse in SailPoint IdentityIQ is used to display identity-centered information from the IdentityCube and related IdentityIQ object relationships. In addition to core identity attributes, accounts, roles, entitlements, manager relationships, and direct reports, IdentityIQ can show objects for which the identity is designated as the owner. Ownership is an important governance concept because owners may be responsible for approving access, maintaining roles, reviewing entitlements, managing applications, or participating in certification and remediation processes.

An object owner in IdentityIQ may be associated with configurable objects such as roles, applications, managed attributes, policies, or other governance-related items. Displaying owned objects from the identity view helps administrators and governance users understand the responsibilities assigned to that identity, not just the access held by the identity. This distinction matters because IdentityIQ models both "what access the identity has" and "what governance responsibilities the identity owns." Therefore, a list of objects the user owns is appropriately displayed in the Identity Warehouse when ownership relationships exist and the viewer has sufficient permission. Reference topics: Identity Modeling, IdentityCube contents, Identity Warehouse, object ownership, manager relationships, and governance responsibility modeling.

NEW QUESTION # 43

Is this statement about uncorrelated accounts true?

Uncorrelated Identity Cubes are removed from IdentityIQ after 30 days.

- A. No
- B. Yes

Answer: A

Explanation:

The statement is false. IdentityIQ does not apply a universal rule that removes uncorrelated IdentityCubes after 30 days.

Uncorrelated accounts or uncorrelated identity records result from aggregation and correlation processing when IdentityIQ cannot confidently associate an account from an application with an existing IdentityCube. These records remain available for administrative review and remediation until they are resolved through correlation logic, manual correlation, re-aggregation, identity refresh activity, or configured cleanup processes.

The key point is that retention and removal behavior is configuration-driven, not controlled by a fixed 30-day product rule.

Administrators may use tasks, aggregation settings, pruning behavior, or lifecycle processes to clean up stale identity or account data, but such actions depend on implementation choices and task configuration. IdentityIQ preserves uncorrelated data because it may represent a real account requiring governance, certification, policy evaluation, or investigation.

Therefore, the assertion that uncorrelated IdentityCubes are automatically removed after 30 days is incorrect.

Reference topics: Applications, uncorrelated account resolution, correlation configuration, aggregation results, IdentityCube association, identity refresh, and administrative cleanup tasks.

NEW QUESTION # 44

Is this a function of QuickLink Populations?

They control which identities can approve access requests.

- A. No
- B. Yes

Answer: A

Explanation:

No. QuickLink Populations do not determine which identities can approve access requests. In SailPoint IdentityIQ, QuickLink

Populations control the availability and scope of QuickLinks for users. They define who can initiate a specific request action, what type of request can be launched, and in many cases who the request can be submitted for. For example, they may allow an employee to request access for themselves or allow a manager to request access for direct reports.

Approval authority is handled separately through request workflows, approval schemes, approval rules, work item assignment logic, application or role owners, managers, governance groups, or configured business processes. When an access request is submitted, IdentityIQ evaluates the configured approval path to determine which identities receive approval work items. That approval routing is not controlled by the QuickLink Population itself.

Therefore, the statement is inaccurate. QuickLink Populations govern request initiation and visibility, while approval routing is governed by workflow and approval configuration. Reference topics: User-Driven Requests, QuickLink Populations, access request process, approval workflows, work items, and request authorization.

NEW QUESTION # 45

Is this statement true for the identity refresh task?

It references the application definitions to determine how to connect to the native systems.

- A. No
- B. Yes

Answer: A

Explanation:

The statement is false. The Identity Refresh task does not use application definitions to determine how to connect to native target systems. That function belongs to application aggregation and connector-based operations. In IdentityIQ, an application definition contains the connector configuration, schemas, correlation settings, aggregation options, and provisioning-related settings required for IdentityIQ to communicate with a managed system.

The Identity Refresh task operates primarily on identity data already present inside IdentityIQ. It updates IdentityCubes by recalculating identity attributes, refreshing role assignments and detections, evaluating policies, processing lifecycle events, updating manager relationships, and applying selected identity model calculations. It is typically run after aggregation or configuration changes so that identity-level governance data reflects current account and entitlement information.

Therefore, connecting to native systems is not the purpose of Identity Refresh. IdentityIQ connects to native systems through aggregation tasks or provisioning operations that reference the application definitions and connectors. Identity Refresh consumes the resulting identity, account, entitlement, and application link data within the IdentityIQ repository.

Reference topics: Identity Modeling - Identity Refresh options; Applications - application definitions and connector settings; Foundational Concepts - tasks versus workflows; Provisioning - connector-based fulfillment.

NEW QUESTION # 46

Is this definition of Identity Cube accurate?

The process of adding to, removing from, or changing a user's access to an application

- A. No
- B. Yes

Answer: A

Explanation:

No. This definition does not describe an Identity Cube. In SailPoint IdentityIQ, an Identity Cube is the central identity record that represents a person or identity within IdentityIQ. It consolidates identity attributes, correlated application accounts, entitlements, assigned roles, detected roles, manager relationship, policy violations, lifecycle state, and other governance-relevant information. The Identity Cube is the primary object used by IdentityIQ to understand who a user is and what access that user has across connected systems.

The statement given describes provisioning, not an Identity Cube. Provisioning is the process of adding, removing, or modifying a user's access on an application. Examples include creating an account, changing account attributes, adding an entitlement, removing group membership, disabling an account, or deleting an account.

Therefore, the definition is inaccurate because it describes an access-change process, while an Identity Cube is an identity data model. Reference topics: Identity Modeling, IdentityCube contents, application account correlation, entitlements, roles, Provisioning, account requests, and access-change fulfillment.

NEW QUESTION # 47

.....

If you feel that you always suffer from procrastination and cannot make full use of your spare time, maybe our IdentityIQ-Associate study materials can help you solve your problem. We are willing to recommend you to try the IdentityIQ-Associate practice guide from our company. Our IdentityIQ-Associate learning questions are in high quality and efficiency test tools for all people. You can just try our three different versions of our IdentityIQ-Associate training quiz, you will find that you can study at anytime and anyplace.
