

Prepare with updated Juniper JN0-460 dumps - Get up to 1 year of free updates

BTW, DOWNLOAD part of Test4Engine JN0-460 dumps from Cloud Storage: https://drive.google.com/open?id=1rgPsrIk93M4TSDVaUsrD_sMRthwPLeAy

Review the products offered by us by downloading JN0-460 free demos and compare them with the study material offered in online course free and vendors' files. You will find our JN0-460 exam dumps the better than our competitors such as exam collection and others. The excellent quality of our JN0-460 exam dumps content, their relevance with the actual JN0-460 Exam needs and their interactive and simple format will prove them superior and quite pertinent to your needs and requirements. If you just make sure learning of the content in the guide, there is no reason of losing the JN0-460 exam.

Juniper JN0-460 Exam Overview:

Certification Vendor:	Juniper Networks
Exam Name:	Mist AI Wired, Specialist (JNCIS-MistAI-Wired)
Exam Number:	JN0-460
Real Exam Qty:	65
Certificate Validity Period:	3 years
Exam Duration:	90 minutes
Available Languages:	English
Exam Price:	\$300 USD
Related Certifications:	JNCIS-MistAI-Wireless JNCIP-MistAI-Wired JNCIA-MistAI
Passing Score:	65% - 70%
Exam Format:	Multiple Choice, Multiple Response
Recommended Training:	Juniper Mist AI Wired Training
Exam Registration:	Pearson VUE Registration
Sample Questions:	Juniper JN0-460 Sample Questions
Exam Way:	Online proctored or onsite at Pearson VUE test centers
Pre Condition:	Recommended: JNCIA-MistAI certification or equivalent knowledge
Official Syllabus URL:	https://www.juniper.net/us/en/training/certification/tracks/mist-ai/jncis-mistai-wired.html

Reliable JN0-460 Exam Guide, JN0-460 Testing Center

The Juniper JN0-460 PDF dumps file is the most convenient way to prepare for the examination. This document is a collection of most probable and realistic Mist AI Wired, Specialist (JNCIS-MistAI-Wired) JN0-460 dumps. With this PDF file, you have Mist AI Wired, Specialist (JNCIS-MistAI-Wired) JN0-460 questions that will appear in the real exam. You can immediately download our JN0-460 PDF Questions from the Test4Engine website after payment. Without place and time limits, you can use the PDF format of Mist AI Wired, Specialist (JNCIS-MistAI-Wired) JN0-460 real exam questions via smartphones, tablets, and laptops.

Juniper JN0-460 Exam Syllabus Topics:

Topic	Details
Topic 1	Wired Assurance Management or Operations: This section of the exam measures the skills of Network Operations Engineers and focuses on the management and operational aspects of Wired Assurance. It covers switch management, port profiles, and dynamic port configuration to ensure optimal network performance. The section also explores service-level expectations, client insights, and the use of APIs for improved monitoring and automation. Candidates gain an understanding of how MistAI enables proactive management and predictive troubleshooting to maintain service quality.
Topic 2	Campus Fabric Architecture: This section of the exam measures the skills of Network Design Engineers and focuses on understanding and deploying Campus Fabric Architectures. It introduces essential design concepts such as EVPN multihoming, IP Clos architecture, and micro-segmentation. The section also compares CRB and ERB models, explains scaling requirements, and highlights how the Campus Fabric Core-Distribution design supports high-performance, scalable, and secure enterprise networks.
Topic 3	Wired Assurance Fundamentals: This section of the exam measures the skills of Network Support Engineers and covers the foundational elements of Wired Assurance within the MistAI ecosystem. It introduces candidates to key concepts such as supported devices, solution architecture, and the main features and components that define Wired Assurance functionality. Additionally, it highlights how MistAI accounts, analytics, and subscriptions integrate to deliver intelligent insights for network performance and operations.
Topic 4	Campus EVPN-VXLAN: This section of the exam measures the skills of Data Center Network Engineers and explores the key principles of VXLAN and EVPN technologies. Candidates learn about Layer 2 tunneling, data and control plane operations, and the functions of VTEPs and VXLAN gateways. Additionally, it covers advanced EVPN concepts such as multipath routing, route types, and identifiers. The section concludes with a focus on MAC learning and policy applications to ensure efficient, scalable, and resilient network fabrics.
Topic 5	Wired Assurance Provisioning or Deployment: This section of the exam measures the skills of Network Deployment Specialists and focuses on the provisioning and deployment processes of Wired Assurance. It includes the essential steps and options involved in setting up networks, from configuration templates to deployment methodologies. Candidates learn about provisioning procedures, supported architectures, and the use of site variables to streamline automation and consistency across wired infrastructures.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q74-Q79):

NEW QUESTION # 74

What are the two ways to forward BUM traffic when using EVPN? (Choose two.)

- A. Use static routes.
- B. Use underlay replication.
- C. Use ingress replication.
- D. Use BGP neighborship.

Answer: B,C

Explanation:

In EVPN-VXLAN, BUM (Broadcast, Unknown unicast, and Multicast) traffic is handled differently than unicast traffic. EVPN provides two main forwarding mechanisms to distribute BUM traffic between VTEPs (VXLAN Tunnel Endpoints): "BUM traffic in EVPN-VXLAN fabrics is replicated using either ingress replication or underlay multicast (PIM-based). Both methods ensure that broadcast and unknown unicast frames reach all remote VTEPs within the same VXLAN segment." Option A: Incorrect - static routes are unrelated to BUM forwarding.
Option B: Incorrect - BGP is the control plane, not a data-plane forwarding method.
Option C: Correct - Ingress replication replicates BUM packets to all remote VTEPs in the same VNI using unicast tunnels.
Option D: Correct - Underlay replication (multicast) uses multicast groups in the IP underlay to distribute BUM frames efficiently.

NEW QUESTION # 75

Which two statements are correct about the EVPN-VXLAN control plane? (Choose two.)

- A. The control plane encapsulates the traffic.
- B. The control plane rewrites the destination MAC address of the packet.
- C. The control plane learns the MAC addresses of end-user devices.
- D. The control plane learns the IP addresses of end-user devices.

Answer: C,D

Explanation:

In an EVPN-VXLAN fabric, the control plane operates over BGP EVPN and is responsible for distributing endpoint reachability information (MAC and IP) among VTEPs. The data plane, by contrast, performs encapsulation and forwarding.
"The EVPN control plane uses BGP to exchange MAC and IP address reachability information between VTEPs, enabling efficient forwarding and loop prevention without relying on flood-and-learn behavior." Option A: Incorrect - encapsulation occurs in the data plane, not the control plane.
Option B: Correct - the control plane distributes MAC-to-VTEP mappings.
Option C: Correct - the control plane also distributes IP-to-MAC associations (Type 2 and Type 5 EVPN routes).
Option D: Incorrect - the control plane does not alter packet headers.

NEW QUESTION # 76

When deploying EVPN, which method of forwarding BUM traffic is supported by Mist?

- A. core-only replication
- B. underlay replication
- C. ingress replication
- D. copy-on-write

Answer: C

NEW QUESTION # 77

Which statement about RadSec is correct?

- A. RadSec allows RADIUS authentication over TCP and SSL.
- B. RadSec allows RADIUS authentication over TCP and TLS.
- C. RadSec allows RADIUS authentication over UDP and TLS.
- D. RadSec allows RADIUS authentication over UDP and SSL.

Answer: B

RadSec(RADIUS over TLS) enhances traditional RADIUS authentication security by encapsulating RADIUS messages within TCP and TLS instead of UDP.

This ensures encrypted, reliable, and authenticated transmission between network devices (such as Juniper EX switches) and RADIUS servers.

It is often used in modern Mist-managed wired networks to securely integrate with Access Assurance or external authentication systems.

NEW QUESTION # 78

EVPN multihoming is essential for which of the following reasons?

- A. Providing link redundancy and load balancing for connected devices
- B. Reducing network bandwidth
- C. Decreasing network redundancy
- D. Increasing single points of failure

Answer: A
