Now, our AZ-900 exam questions can help you realize your dreams. Not only our AZ-900 study braindumps can help you obtain the most helpful knowledge and skills to let you stand out by solving the problem the others can't, but also our AZ-900 preparation guide can help you get the certification for sure.

Microsoft Azure Fundamentals Sample Questions (Q446-Q451):

NEW QUESTION # 446

A company is planning on using Azure Storage Accounts. They have the following requirement

- Storage of 2 TB of data
- Storage of a million files

Would using Azure Storage fulfil these requirements?

- A. Yes
- B. No

Answer: A

Explanation:

If you look at the Microsoft documentation, Azure storage has a high limit on the amount that can be stored and no limit on the number of files

<https://docs.microsoft.com/en-us/azure/storage/common/storage-scalability-targets>

NEW QUESTION # 447

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE; Each correct selection is

worth one point.

Answer:

Explanation:

□ Explanation

NEW QUESTION # 448

You plan to provision Infrastructure as a Service (IaaS) resources in Azure.

Which resource is an example of IaaS?

- A. an Azure virtual machine
- B. an Azure SQL database
- C. an Azure web app
- D. an Azure logic app

Answer: A

Explanation:

An Azure virtual machine is an example of Infrastructure as a Service (IaaS).

Azure web app, Azure logic app and Azure SQL database are all examples of Platform as a Service (Paas).

NEW QUESTION # 450

What is the most severe failure from which an Azure Availability Zone can be used to protect access to Azure service?

- A. a storage failure
- B. a physical server failure
- C. an Azure data center failure
- D. an Azure region failure

Answer: C

Explanation:

Availability zones expand the level of control you have to maintain the availability of the applications and data on your VMs. An Availability Zone is a physically separate zone, within an Azure region. There are three Availability Zones per supported Azure region.

Each Availability Zone has a distinct power source, network, and cooling. By architecting your solutions to use replicated VMs in zones, you can protect your apps and data from the loss of a datacenter. If one zone is compromised, then replicated apps and data are instantly available in another zone.
