

CCSK Reliable Exam Questions & Actual CCSK Tests

CSA cloud security alliance®

CCSK
Certification of Cloud Security Knowledge

CCSK v5 Sample Questions

Check your knowledge before taking the exam

Domain 1: Cloud Computing Concepts & Architectures

Q1: Which of the following accurately defines the primary responsibility difference for IaaS, PaaS, and SaaS?

- In PaaS, the user manages the hardware and network infrastructure
- In SaaS, the user is responsible for managing and updating the application itself
- **In IaaS, the user manages applications, data, runtime, and OS**
- In IaaS, the provider manages both the infrastructure and applications

Justification: In the IaaS model, infrastructure management primarily lies with the user, except for the underlying hardware.

Q2: What does ISO/IEC 22123-1:2023 define cloud computing as?

- **A scalable and elastic pool of shareable resources**
- A static and local set of dedicated resources
- A fixed and isolated pool of private resources
- A static and flexible collection of isolated resources

Justification: This definition specifically highlights scalability, elasticity, and resource sharing, which are fundamental aspects of cloud computing as defined by ISO/IEC 22123-1:2023.

Q3: Which characteristic of cloud computing can potentially increase security risks when compared to traditional on-premises infrastructure?

- Elasticity
- Broad network access
- Resource pooling
- **Multi-tenancy**

Once bit twice shy! Many candidates feel depressed since they failed before, and someone choose to delay exams, someone may choose to give up. Cheer up! Our latest Cloud Security Alliance CCSK exam review questions will be your best savior and help you out of failure experience. Yes. We are the best authorized legal company which offers Valid CCSK Exam Review questions many years, we are entitled as the best high passing rate provider now.

Our CCSK exam training' developers to stand in the perspective of candidate, fully consider their material basis and actual levels of knowledge, formulated a series of scientific and reasonable learning mode, meet the conditions for each user to tailor their learning materials. What's more, our CCSK Guide questions are cheap and cheap, and we buy more and deliver more. The more customers we buy, the bigger the discount will be. In order to make the user a better experience to the superiority of our CCSK actual exam guide, we also provide considerate service,

CCSK Reliable Exam Questions - 100% Pass Cloud Security Alliance CCSK First-grade Actual Tests

The computer is widely used in all phases of society. If you get a Cloud Security Alliance certification you will have wide development for business, education, medicine and nearly all walks of life. CCSK test dumps materials play an important role if you are willing to get a certificate. If you can show your computer skills and talents, it will be your outstanding advantage over others.

VCE4Dumps Valid CCSK Test Dumps materials may be your first step to success as an IT worker.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q231-Q236):

NEW QUESTION # 231

The example of two administrators required to complete an operation in cloud is an example of:

- A. Collaborative efforts
- **B. Separy**
- C. Conflict of interest
- D. Mandy

Answer: B

Explanation:

Separation of duties (SoD) (also known as "Segregation of duties") is the concept of having more than one person required to complete a task. In business the separation by sharing of more than one individual in one single task is an internal control intended to prevent fraud and error.

NEW QUESTION # 232

How does centralized logging simplify security monitoring and compliance?

- A. It encrypts all logs to prevent unauthorized access.
- B. It automatically resolves all detected security threats.
- **C. It consolidates logs into a single location.**
- D. It decreases the amount of data that needs to be reviewed.

Answer: C

Explanation:

Centralized logging aggregates logs in one location, making it easier to monitor, analyze, and comply with regulatory requirements.

Reference: [Security Guidance v5, Domain 6 - Security Monitoring]

NEW QUESTION # 233

What is a key benefit of using customer-managed encryption keys with cloud key management service (KMS)?

- A. It reduces the computational load on the cloud service provider
- **B. Customers retain control over their encryption keys**
- C. Customers can share their encryption keys more easily
- D. Customers can bypass the need for encryption

Answer: B

Explanation:

The correct answer is B. Customers retain control over their encryption keys.

Using customer-managed encryption keys (CMEK) with a cloud Key Management Service (KMS) allows the customer to retain full control over the encryption keys used to encrypt their data. This is crucial in maintaining data sovereignty, privacy, and compliance with regulatory requirements.

Key Benefits of Customer-Managed Encryption Keys:

* **Key Ownership and Control:** Unlike cloud provider-managed keys, CMEK ensures that the customer has full authority over the key's lifecycle, including creation, rotation, and deletion.

* **Enhanced Security:** Customers can enforce strict access controls and audit who accesses the keys.

* **Compliance:** Many regulations (like GDPR or HIPAA) mandate that data owners maintain control over encryption keys.

* **Data Privacy:** Even though the data is stored on the cloud, the provider cannot access unencrypted data without the customer's permission.

* **Flexibility:** Customers can choose when to revoke or rotate keys, which directly impacts data availability and access.

Why Other Options Are Incorrect:

* **A. Bypass the need for encryption:** CMEK does not eliminate the need for encryption; it strengthens it by giving customers direct

control.

* C. Share encryption keys more easily: Sharing encryption keys can increase security risks, and CMEK is designed to restrict, not ease, key sharing.

* D. Reduces computational load on the cloud service provider: CMEK does not impact the computational load. It focuses on key management and control rather than reducing processing overhead.

Real-World Example:

In AWS KMS, using CMEK allows customers to bring their own keys (BYOK) and manage them directly through AWS Key Management Service. Similar practices exist in Google Cloud KMS and Azure Key Vault, where customers can generate and control their own encryption keys.

Practical Use Case:

A healthcare provider using a cloud service to store patient records may use CMEK to ensure that sensitive data is encrypted under keys they control, ensuring compliance with regulations like HIPAA.

NEW QUESTION # 234

What is the primary purpose of cloud governance in an organization?

- A. To reduce the cost of cloud services
- B. To eliminate the need for on-premises data centers
- C. To ensure compliance, security, and efficient management aligned with the organization's goals
- D. To increase data transfer speeds within the cloud environment

Answer: C

Explanation:

Cloud governance establishes controls and policies that align with the organization's goals for security, compliance, and efficient management in the cloud. Reference: [Security Guidance v5, Domain 2 - Cloud Governance]

NEW QUESTION # 235

Which of the following statements best reflects the responsibility of organizations regarding cloud security and data ownership?

- A. Cloud providers are responsible for everything under the 'limited O responsibilities clauses.' The customer and the provider have joint accountability.
- B. Organizations are accountable for the security and compliance of their data and systems, even though they may lack full visibility into their cloud provider's infrastructure.
- C. Cloud providers assume full responsibility for the security obligations, and cloud customers are accountable for overall compliance.
- D. Data ownership rights are solely determined by the cloud provider, leaving organizations with no control or accountability over their data.

Answer: B

Explanation:

The Shared Responsibility Model in cloud computing establishes that:

Cloud providers are responsible for securing the underlying infrastructure, networking, and hardware.

Customers (organizations) are responsible for securing data, identity and access management (IAM), encryption, and compliance obligations.

Data ownership remains with the customer, even though visibility into cloud infrastructure may be limited.

The major security challenge in cloud computing is that organizations lack full control over cloud infrastructure but must still ensure that security policies align with regulatory requirements (e.g., GDPR, HIPAA, PCI DSS).

This principle is outlined in:

CCSK v5 - Security Guidance v4.0, Domain 2 (Governance and Enterprise Risk Management) Cloud Security Alliance's (CSA) Cloud Controls Matrix (CCM) - Data Security and Governance.

NEW QUESTION # 236

.....

PDF format is pretty much easy to use for the ones who always have their smart devices and love to prepare for Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) exam from them. Applicants can also make notes of printed CCSK Exam Material so they can use it anywhere in order to pass Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) with a good score.
