We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Our product boasts many merits and functions. You can download and try out our Mule-Arch-201 test question freely before the purchase. You can use our product immediately after you buy our product. We provide 3 versions for you to choose and you only need 20-30 hours to learn our Mule-Arch-201 Training Materials and prepare the exam. The passing rate and the hit rate are both high.

It is a truism that an internationally recognized Mule-Arch-201 certification can totally mean you have a good command of the knowledge in certain areas. If you are overwhelmed by workload heavily and cannot take a breath from it, why not choose our Mule-Arch-201 preparation torrent? We are specialized in providing our customers with the most reliable and accurate exam materials and help them pass their exams by achieve their satisfied scores. With our Mule-Arch-201 practice materials, your exam will be a piece of cake.

Timely Updated Salesforce Mule-Arch-201 Dumps

Our APP version of Mule-Arch-201 exam questions can support almost any electronic device, from iPod, telephone, to computer and so on. You can use Our Mule-Arch-201 test torrent by your telephone when you are travelling far from home; I think it will be very convenient for you. You can also choose to use our Mule-Arch-201 Study Materials by your computer when you are at home. You just need to download the online version of our Mule-Arch-201 study materials, which is not limited to any electronic device and support all electronic equipment in anywhere and anytime.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q121-Q126):

NEW QUESTION # 121

Once an API Implementation is ready and the API is registered on API Manager, who should request the access to the API on Anypoint Exchange?

- A. API Consumer
- B. Both
- C. API Client
- D. None

Answer: A

Explanation:

Correct Answer: API Consumer

>> API clients are piece of code or programs that use the client credentials of API consumer but does not directly interact with Anypoint Exchange to get the access

>> API consumer is the one who should get registered and request access to API and then API client needs to use those client credentials to hit the APIs So, API consumer is the one who needs to request access on the API from Anypoint Exchange

NEW QUESTION # 122

In which layer of API-led connectivity, does the business logic orchestration reside?

- A. Experience Layer
- B. Process Layer
- C. System Layer

Answer: B

Explanation:

Correct Answer: Process Layer

>> Experience layer is dedicated for enrichment of end user experience. This layer is to meet the needs of different API clients/consumers.

>> System layer is dedicated to APIs which are modular in nature and implement/ expose various individual functionalities of backend systems

>> Process layer is the place where simple or complex business orchestration logic is written by invoking one or many System layer modular APIs So, Process Layer is the right answer.

NEW QUESTION # 123

Which scenario is suited for MUnit tests instead of integration tests?

- A. When testing does not require knowledge of implementation details
- B. For read-only interactions to any dependencies (such as other web APIs)
- C. For tests that are implemented using SoapUI
- D. When no mocking is permissible

Answer: B

Explanation:

MUnit is MuleSoft's testing framework for creating and running automated tests within Anypoint Studio. It is specifically designed for unit testing Mule applications and is best suited when testing doesn't require understanding the inner workings or implementation details of the components being tested.

Ideal Use Cases for MUnit:

MUnit is optimal when testing individual flows, functions, or components in isolation. This type of testing focuses on verifying the behavior of each unit without needing to understand the complete system.

Since unit tests do not require external integrations or dependencies to be live, mocking is commonly used in MUnit to simulate the behavior of external services and APIs.

Why Option B is Correct:

Option B aligns with the concept of unit testing, where the emphasis is on testing functionality rather than system integration.

Integration tests, on the other hand, would require implementation knowledge and live endpoints, making them unsuitable for MUnit's scope.

of Incorrect Options:

Option A (read-only interactions) and Option C (no mocking) do not suit MUnit's typical testing environment as MUnit is designed with mocking capabilities to simulate dependencies.

Option D (SoapUI-based tests) suggests an external testing tool, while MUnit is specific to MuleSoft.

Reference

For more on MUnit best practices, refer to MuleSoft's MUnit documentation.

NEW QUESTION # 124

Which statement is true about identity management and client management on Anypoint Platform?

- **A. Anypoint Platform supports configuring one external identity provider**
- B. Both client management and identity management require an identity provider
- C. If an external client provider is configured, it must be configured at the Anypoint Platform organization level and cannot be assigned to individual business groups and environments
- D. If an external identity provider is configured, the SAML 2.0 bearer tokens issued by the identity provider cannot be used for invocations of the Anypoint Platform web APIs

Answer: A

Explanation:

Anypoint Platform allows organizations to integrate one external identity provider (IdP) for identity and access management (IAM), supporting SSO and centralized user authentication.

Identity Provider Limit:

Anypoint Platform supports configuring a single IdP for the organization, which can be used to authenticate all users across business groups and environments within that Anypoint organization.

of Correct Answer (C):

Configuring one IdP ensures centralized and secure identity management, aligned with MuleSoft's architecture.

of Incorrect Options:

Option A is incorrect because SAML 2.0 bearer tokens from external IdPs can indeed be used for invoking Anypoint Platform APIs.

Option B is incorrect as client providers can be assigned to specific business groups and environments.

Option D is incorrect since only identity management strictly requires an IdP; client management does not.

Reference

For further details on identity management options, consult MuleSoft documentation on Anypoint Platform's IAM capabilities.

NEW QUESTION # 125

The implementation of a Process API must change.

What is a valid approach that minimizes the impact of this change on API clients?

- A. Postpone changes until API consumers acknowledge they are ready to migrate to a new Process API or API version
- B. Implement the Process API changes in a new API implementation, and have the old API implementation return an HTTP status code 301 - Moved Permanently to inform API clients they should be calling the new API implementation
- C. Update the RAML definition of the current Process API and notify API client developers by sending them links to the updated RAML definition
- **D. Implement required changes to the Process API implementation so that whenever possible, the Process API's RAML**

definition remains unchanged

Answer: D

Explanation:

Correct Answer: Implement required changes to the Process API implementation so that, whenever possible, the Process API's RAML definition remains unchanged.

Key requirement in the question is:

>> Approach that minimizes the impact of this change on API clients

Based on above:

>> Updating the RAML definition would possibly impact the API clients if the changes require anything mandatory from client side. So, one should try to avoid doing that until really necessary.

>> Implementing the changes as a completely different API and then redirecting the clients with 3xx status code is really upsetting design and heavily impacts the API clients.

>> Organisations and IT cannot simply postpone the changes required until all API consumers acknowledge they are ready to migrate to a new Process API or API version. This is unrealistic and not possible.

The best way to handle the changes always is to implement required changes to the API implementations so that, whenever possible, the API's RAML definition remains unchanged.

NEW QUESTION # 126

.....

The exam will be vanquished smoothly this time by the help of valid latest Mule-Arch-201 exam torrent. Written by meticulous and professional experts in this area, their quality has reached to the highest level compared with others' similar Mule-Arch-201 test prep and concord with the syllabus of the exam perfectly. Their questions points provide you with simulation environment to practice. In that case, when you sit in the Real Mule-Arch-201 Exam room, you can deal with almost every question with ease.
