

최신JN0-224적중율높은인증덤프공부덤프샘플문제다 운로드

BONUS!!! ITDumpsKR JN0-224 시험 문제집 전체 버전을 무료로 다운로드하세요: https://drive.google.com/open?id=1WT_MsqQJjp2Rtkhu3lerJMf00SMYQuoy

여러분이 어떤 업계에서 어떤 일을 하든지 모두 항상 업그레이되는 자신을 원할 것입니다. IT업계에서도 마찬가지입니다. 모두 자기 자신의 업그레이드는 물론 자기만의 공간이 있기를 바랍니다. 전문적인 IT인사들은 모두 아시다시피 Juniper JN0-224인증시험이 여러분의 이러한 요구를 만족시켜드립니다. 그리고 우리 ITDumpsKR는 이러한 꿈을 이루어드립니다.

Juniper JN0-224 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
주제 2	<ul style="list-style-type: none"> Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.

주제 3	<ul style="list-style-type: none"> Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
주제 4	<ul style="list-style-type: none"> NETCONF XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.
주제 5	<ul style="list-style-type: none"> Python PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.

Juniper JN0-224 인증 덤프

모두 아시다시피 Juniper JN0-224 인증 시험은 업계에서도 아주 큰 비중을 차지할만큼 큰 시험입니다. 하지만 문제는 어떻게 이 시험을 패스할 것이냐 이죠. Juniper JN0-224 인증 시험 패스하기는 너무 힘들기 때문입니다. 다른 사이트에 있는 자료들도 솔직히 모두 정확성이 떨어지는 건 사실입니다. 하지만 우리 ITDumpsKR의 문제와 답은 IT 인증 시험 준비 중인 모든 분들에게 필요한 자료를 제공할 수 있습니다. 그리고 중요한 건 우리의 문제와 답으로 여러분은 한번에 시험을 패스하실 수 있습니다.

최신 Automation and DevOps JN0-224 무료 샘플 문제 (Q48-Q53):

질문 # 48

Junos supports which two APIs for on-box scripting? (Choose two.)

- A. JET
- B. XML
- C. Chef
- D. Puppet

정답: A,B

설명:

Juniper Networks' Junos operating system supports several APIs for on-box scripting, two of which are:

JET (Juniper Extension Toolkit): JET is a modern API framework that provides a programmable interface for interacting with Junos. It allows developers to create custom applications that run directly on Junos devices, enabling the automation of network operations. JET provides both a gRPC and a REST API interface, allowing for flexible integration with external systems.

XML API: The Junos XML API allows direct interaction with the Junos OS through XML-based requests. This API can be used to retrieve information, configure devices, and execute commands on Junos devices. The XML API is crucial for automation tasks as it provides a structured and consistent way to interact with the device's configuration and operational data.

Detailed Explanation:

JET (A) provides high-performance access to Junos routing, switching, and service elements via programmable interfaces. It is highly used for creating custom applications that require tight integration with the Junos OS.

XML (C), on the other hand, is a well-established method for interacting with Junos, especially for legacy systems or when working within environments where XML is the standard data format.

Other options like Puppet (B) and Chef (D) are not APIs provided by Junos for on-box scripting but are configuration management tools used externally to manage Junos devices.

Reference:

Juniper Networks JET Documentation: Provides details on how to leverage JET APIs for automation.

Junos XML Management Protocol Guide: Describes how to use XML for scripting and automating tasks in Junos.

These APIs are key components of Juniper's automation strategy, allowing for scalable, flexible, and efficient network operations.

질문 # 49

Which two data structures are used in JSON? (Choose two.)

- A. objects
- B. dictionaries
- C. arrays
- D. tuples

정답: A,C

설명:

In JSON (JavaScript Object Notation), the two primary data structures are:

Objects: These are collections of key-value pairs, where each key is a string, and the value can be a string, number, array, boolean, or another object. In Python, this structure is analogous to a dictionary.

Arrays: These are ordered lists of values, where each value can be of any data type, including another array or object. In Python, this structure is similar to a list.

Option A (tuples) and Option D (dictionaries) refer to Python-specific data structures and are not directly used in JSON.

Supporting Reference:

JSON Documentation and Tutorials: JSON objects and arrays are the standard data structures used in this format, as described in many tutorials and the official JSON documentation.

질문 # 50

Which Junos configuration database is updated by PyEZ by default?

- A. dynamic
- B. private
- C. shared
- D. ephemeral

정답: B

설명:

An event script is used to automate responses to system events in Junos, such as an interface going down. These scripts are triggered automatically when a specified event occurs, making them suitable for tasks like monitoring interface status and executing actions when the status changes.

Option B (event) is correct because event scripts are designed for reacting to system events like an interface going down.

Option A (commit) is used for configuration changes, Option C (operation) is used for operational tasks, and Option D (SNMP) is not applicable in this context.

Supporting Reference:

Juniper Networks Event Scripts Documentation: Details how event scripts are used to automate responses to specific system events in Junos

질문 # 51

Which two statements are valid regarding Junos automation? (Choose two.)

- A. The jsd process handles XML API calls.
- B. The mod process handles XML API calls.
- C. The mgd process handles JET API requests.
- D. The jsd process handles JET API requests.

정답: A,D

설명:

In Junos automation, several processes handle API requests, and understanding which process handles what is crucial:

jsd Process:

XML API Calls (A): The jsd process is responsible for handling XML API calls, which are a significant part of Junos automation. XML API allows for structured and standardized communication with Junos devices, enabling automation scripts to query and configure devices.

JET API Requests (C): The jsd process also handles JET (Junos Extension Toolkit) API requests. JET provides a more modern, programmable interface for interacting with Junos OS, and jsd is the process that manages these interactions.

mgd Process (Incorrect Option):

Not for JET API Requests: The mgd process handles general management operations, such as CLI commands and managing the
