Braindumps Cybersecurity-Architecture-and-Engineering Pdf | Valid Cybersecurity-Architecture-and-Engineering Test Review

In order to gain more competitive advantages when you are going for a job interview, more and more people have been longing to get a Cybersecurity-Architecture-and-Engineering certification. They think the certification is the embodiment of their ability; they are already convinced that getting a Cybersecurity-Architecture-and-Engineering certification can help them look for a better job. There is no doubt that it is very difficult for most people to pass the exam and have the certification easily. If you are also weighted with the trouble about a Cybersecurity-Architecture-and-Engineering Certification, we are willing to soothe your trouble and comfort you.

Many applicants do not fulfill their dream of becoming professionals because of using outdated exam preparation material. Failure in the WGU Cybersecurity Architecture and Engineering (KFO1/D488) exam leads them to anxiety. If this situation sounds familiar, do not waste time and get your hands on WGU Cybersecurity-Architecture-and-Engineering for exam preparation.

Valid Cybersecurity-Architecture-and-Engineering Test Review - Test Cybersecurity-Architecture-and-Engineering Answers

In the past few years, our Cybersecurity-Architecture-and-Engineering study materials have helped countless candidates pass the Cybersecurity-Architecture-and-Engineering exam. After having a related certification, some of them encountered better opportunities for development, some went to great companies, and some became professionals in the field. Cybersecurity-Architecture-and-Engineering Study Materials have stood the test of time and market and received countless praises. Through the good reputation of word of mouth, more and more people choose to use Cybersecurity-Architecture-and-Engineering study torrent to prepare for the Cybersecurity-Architecture-and-Engineering exam, which makes us very gratified.

WGU Cybersecurity Architecture and Engineering (KFO1/D488) Sample Questions (Q128-Q133):

NEW QUESTION # 128
Which item is an input device?

- A. CD
- B. Scanner
- C. Printer
- D. Flash Drive

Answer: B

Explanation:
* An input device is any hardware component that allows a user to enter data into a computer.
* A scanner is an input device that converts physical documents into digital format.
* The other options:
* Printer is an output device.

* Flash drive is a storage device.
* CD can be both storage and media for input/output depending on the context but is not primarily used for direct data input.
* Therefore, a scanner is the correct answer for an input device.

NEW QUESTION # 129

An IT organization has recently implemented a hybrid cloud deployment. The server team is deploying a new set of domain-joined Windows servers on cloud-based virtual machines. Users must be able to use their Active Directory credentials to sign in to applications regardless of whether they are running on Windows servers in the cloud or on-premises.

* A. Identity federation
* B. Two-step verification
* C. Privileged identity management
* D. Challenge-Handshake Authentication Protocol (CHAP)

Answer: A

Explanation:
Identity federationallows authentication credentials to be used across multiple systems or domains- includingon-premises and cloud platforms-without duplicating user databases.
NIST SP 800-63C (Federated Identity Guidelines):
"Federation enables users to access multiple, disparate services using a single digital identity that can be shared securely across organizational boundaries." This approach is essential in hybrid architectures where cloud VMs and on-prem servers must recognize acentralized identity providerlike Active Directory.
#WGU Course Alignment:
Domain:Access Control and Identity Management
Topic:Implement federated identity in hybrid and multi-cloud environments

NEW QUESTION # 130

What is scope creep?

* A. When the project is completed in less than the required time
* B. Small changes in a project that lead to bigger changes
* C. The extent of the project that lacks needed requirements
* D. Realization that the organization staffing is inadequate

Answer: B

Explanation:
Scope creep refers to the phenomenon where the scope of a project gradually increases over time due to small, incremental changes that were not initially planned or approved. This can happen when:
* New featuresor requirements are added without proper evaluation or approval.
* Stakeholderscontinuously request small changes or additions.
* Lack of a clear scope definitionand change control process.
These small changes can accumulate, leading to significant deviations from the original project plan, affecting the project's schedule, budget, and overall success.

NEW QUESTION # 131

When is it better to purchase software rather than build a software solution in-house?

* A. When the company wants to develop the skill sets of its internal IT staff
* B. When the company has very specific needs

- C. When there is a short timeline
- D. When the company wants internal growth

Answer: C

Explanation:
It is better to purchase software rather than build a software solution in-house when there is a short timeline.
Building software from scratch requires significant time for development, testing, and deployment. Purchasing off-the-shelf software can significantly reduce the time needed to implement a solution. Other considerations include:
* Cost-effectiveness: Pre-built software can be more cost-effective than developing a custom solution, especially when factoring in the costs of development, maintenance, and support.
* Immediate availability: Purchased software is usually ready to deploy immediately, whereas custom development can take months or even years.
* Proven reliability: Commercial software often has a track record of reliability and user support, reducing the risk of bugs and issues that may arise with custom development.
Therefore, when time is of the essence, purchasing software is the preferable option.

NEW QUESTION # 132
An IT organization has recently suffered multiple data breaches. The security operations center (SOC) team has been tasked with preventing future breaches by implementing user monitoring. The proposed solution must provide insights about unusual user behaviors from a variety of internal corporate resources.

- A. Security information and event management (SIEM)
- B. Secure Shell (SSH) Protocol
- C. Virtual private network (VPN)
- D. Web application firewall (WAF)

Answer: A

Explanation:
SIEM systems consolidate logs and events from across the enterprise and apply behavior analysis and correlation rules to detect suspicious activity, including lateral movement, brute force, and privilege escalation.
NIST SP 800-137 (Information Security Continuous Monitoring for Federal Information Systems and Organizations):
"SIEM solutions provide security teams with insight into potentially malicious activity and enable proactive incident detection and response."
#WGU Course Alignment:
Domain:Security Operations and Monitoring
Topic:Utilize SIEM for real-time user behavior analysis
