NEW QUESTION # 35

You are creating a Story report on employment and compensation information. You have created two queries to support the story report. The table and the left chart are using an employment query as its data source. The right chart uses a compensation query as its data source. Both queries include the field for the employee Job Title. When you add an input control to the page, it only filters the table and the left chart. What action must you take to configure the input control to effect both charts and the table?

- A. Update Linked Analysis.
- **B. Set up Linked Dimensions.**
- C. Enable Cascading Effects.
- D. Convert it to a Story Filter.

Answer: B

Explanation:

* Problem Description

* The input control must filter multiple queries (employment and compensation) by the Job Title field. This requires linking dimensions across the queries.

* Solution: Linked Dimensions

* Configuring Linked Dimensions connects the shared field (Job Title) between the queries. This ensures the input control affects all visuals based on the linked field.

* Why Other Options are Incorrect

* A (Story Filter): Applies filters globally but does not link dimensions between queries.

* B (Update Linked Analysis): Handles interactivity within a single query but not across multiple queries.

* C (Enable Cascading Effects): This is unrelated to linking dimensions.
