VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."
Topic 2	• VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.

Topic 3	• Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.

VMware vSphere 8.x Advanced Design Sample Questions (Q50-Q55):

NEW QUESTION # 50
An architect is working on a security design for a shared storage environment. The storage array provides connectivity by the NFS protocol.
Which two design decisions could the architect include for this solution? (Choose two.)

- A. Create a dedicated storage network
- B. Create dedicated volumes for sensitive data
- C. Create a dedicated VLAN
- D. Create a dedicated Fibre Channel network
- E. Create a challenge handshake authentication protocol (CHAP) password to prevent unauthorized access

Answer: A,C

Explanation:
Create a dedicated storage network:
Creating a dedicated storage network ensures that storage traffic is isolated from general network traffic, improving both security and performance. This design choice helps prevent unauthorized access, minimizes the potential for network congestion, and ensures that storage traffic is not impacted by other workloads or services on the network.
Create a dedicated VLAN:
By placing storage traffic on its own VLAN, the architect ensures further network segmentation. This VLAN can be used exclusively for NFS traffic, improving both security and performance. It also allows for easier management and monitoring of storage traffic, while helping prevent unauthorized access from other parts of the network.

NEW QUESTION # 51
Which type of requirement focuses on the processing power and resources needed by the system?

- A. Network requirements
- B. Performance requirements
- C. Storage requirements
- D. Compute requirements

Answer: D

NEW QUESTION # 52
During a workshop for a design project, the following information is shared:
Develop and maintain strong relationships with key stakeholders and partners to promote collaboration.
Maintain high standards of quality and professionalism in all aspects of the project.
Build a strong foundation for future projects, including cloud infrastructures.

Ensure project timelines and milestones are met by effectively managing resources and priorities.
Which of these would be classified as a business outcome of the project?

- A. Maintain high standards of quality and professionalism in all aspects of the project.
- B. Build a strong foundation for future projects, including cloud infrastructures.
- C. iDevelop and maintain strong relationships with key stakeholders and partners to promote collaboration.
- D. Ensure project timelines and milestones are met by effectively managing resources and priorities.

Answer: B

Explanation:
A business outcome refers to a result or impact that directly contributes to the strategic goals of the organization, typically focusing on long-term objectives or future benefits. In this case, building a strong foundation for future projects, including cloud infrastructures, aligns with the business goal of positioning the organization for future success and scalability. This outcome is about preparing the organization for the future, which is a key business-driven result.

NEW QUESTION # 53
An architect is designing a new vSphere platform to meet a list of requirements from the security team.
Which two requirements would be classified as non-functional requirements? (Choose two.)

- A. Migration of virtual machines between hosts must be encrypted
- B. Critical events generated within the platform must be logged to an external Syslog service
- C. Data integrity must be ensured
- D. A common content library must be maintained across all data centers
- E. Log information must be verbose to support incident resolution

Answer: A,E

NEW QUESTION # 54
The architect for a large enterprise is tasked with reviewing a proposed design created by a service partner.
Which design elements are expected to be detailed within the physical design section of the documentation?

- A. A list of requirements, constraints, and risks
- B. An entity relationship diagram describing upstream and downstream dependencies for specific service components
- C. A design diagram illustrating the configuration and specific attributes, such as IP addresses
- D. A solution architecture diagram with the components and data flow

Answer: C

Explanation:
The physical design is based on the logical design. The physical design includes specific hardware from specific vendors. This design also lists specific configurations for each of the components that are deployed.
