A few crops of practice materials are emerging in the market these days, with undecided quality to judge from customers' perspective. If you choose the wrong 3V0-21.23 practice material, it will be a grave mistake. Their behavior has not been strictly ethical and irresponsible to you, which we will never do. We know making progress and getting the certificate of 3V0-21.23 Training Materials will be a matter of course with the most professional experts in command of the newest and the most accurate knowledge in it. That's why our VMware vSphere 8.x Advanced Design exam prep has taken up a large part of market.

VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.
Topic 2	IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."
Topic 3	Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.

VMware vSphere 8.x Advanced Design Sample Questions (Q32-Q37):

NEW QUESTION # 32

What is the purpose of determining business continuity requirements for a vSphere design?

- A. To specify the expected levels of system performance and responsiveness.
- B. To optimize the system's data storage and retrieval processes.
- **C. To ensure uninterrupted business operations in case of disruptions or failures.**
- D. To identify the virtual machines and cores needed for the vSphere environment.

Answer: C

NEW QUESTION # 33

A customer has six hosts available in a cluster. When running at full capacity, all virtual machines can be run on two hosts.

How many hosts can the customer place into maintenance mode at the same time while still providing N+2 resiliency to the cluster?

- A. Three
- B. One
- C. None
- **D. Two**

Answer: D

Explanation:

2 Hosts to hold the running VM at full capacity

2 As resiliency N+2

2 In maintenance mode

NEW QUESTION # 34

A company has a requirement that all production applications must have a maximum tolerable downtime (MTD) of one hour per month.

Which statement would be included in the conceptual design to support this requirement?

- **A. Server hardware has been allocated for the production applications.**

- B. vSphere HA Host Failure Response will be set to Restart VMs.
- C. Production applications will run in a dedicated Tier 2 cluster.
- D. vSphere Fault Tolerance (FT) will not be enabled for the production applications.

Answer: A

Explanation:

To meet the requirement of maximum tolerable downtime (MTD) of one hour per month, the system must ensure that in the event of a host failure, the production applications (virtual machines) are restarted as quickly as possible. Configuring vSphere HA Host Failure Response to Restart VMs ensures that VMs are automatically restarted on available hosts in the cluster if a host failure occurs. This setup minimizes downtime and ensures that the system can recover within the specified MTD of one hour per month.

NEW QUESTION # 35

An architect makes the design decision to install ESXi on embedded and resilient 8 GB SD cards. What is the impact of this design decision?

- A. Host profiles must be used for this kind of installation
- B. The vSphere Auto Deploy feature must be enabled on vCenter Server
- C. Scratch partition would need to be created on the external storage
- D. The size of the SD cards is too small and the installation will fail

Answer: C

NEW QUESTION # 36

An architect is designing a new vSphere environment to meet the following requirements:

- REQ01 The platform must provide a minimum of N+1 redundancy.
 - REQ02 The recovery point objective (RPO) for all virtual machines within the environment is one hour.
 - REQ03 The production environment must be deployed into the primary data center.
 - REQ04 The design must adhere to the company security standards, which include Payment Card Industry (PCI) Data Security Standard compliance.
 - REQ05 The platform must be capable of running 1,000 virtual machines across both data centers concurrently.
- Which two of the listed requirements would be classified as functional requirements? (Choose two.)

- A. The platform must provide a minimum of N+1 redundancy.
- B. The design must adhere to the company security standards, which include Payment Card Industry (PCI) Data Security Standard compliance.
- C. The platform must be capable of running 1,000 virtual machines across both data centers concurrently.
- D. The recovery point objective (RPO) for all virtual machines within the environment is one hour.
- E. The production environment must be deployed into the primary data center.

Answer: C,E
