Valid 3V0-32.23 Pass Guaranteed - Easy and Guaranteed 3V0-32.23 Exam Success

It means you can use the Cloud Management and Automation Advanced Design (3V0-32.23) PDF version of PassSureExam anywhere at any time on the smart device you have. Our team of professionals continuously updates the collection of VMware 3V0-32.23 PDF Questions according to changes in the real test's content. Due to these regular updates, you will get a better experience.

VMware Cloud Management and Automation Advanced Design Sample Questions (Q213-Q218):

NEW QUESTION # 213

Which three statements are true regarding a multitenant deployment where each tenant managed its own infrastructure in vRealize Automation? (Choose three.)

- A. Each tenant has an IaaS administrator who could create fabric groups and appoint fabric administrators with their respective tenants.
- B. Fabric administrators manage reservations only for the users in their own tenant.
- C. Each tenant must provide its own infrastructure resources and CANNOT share a common infrastructure.
- D. Fabric administrators CANNOT create reservations for business groups in other tenants.
- E. The system administrator is the only user who logs in to the default tenant to manage system-wide configurations and create tenants.

Answer: A,B,E

NEW QUESTION # 214

A financial business wants to reduce the time-to-market by automating the end-to-end testing of a prime service application and releasing it with minimal user intervention.
Which service in VMware Aria Automation will allow the business to achieve the requirement?

- A. Aria Automation Orchestrator
- B. Aria Automation Pipelines
- C. Aria Automation Consumption
- D. Aria Automation Assembler

Answer: B

Explanation:
Aria Automation Pipelines is designed for automating and orchestrating continuous integration and continuous delivery (CI/CD) workflows, including end-to-end testing and application release with minimal user intervention, aligning directly with the business requirement.

NEW QUESTION # 215

Development team members would like to build new virtual machines using vRealize Orchestrator workflow. They would also like them to be added automatically to DNS prior to initial start. The domain administration team is responsible for DNS and requires review of any DNS entry requests prior the creation of new machines.
Which design will satisfy these requirements?

- A. Option A
- B. Option D
- C. Option C
- D. Option B

Answer: A

NEW QUESTION # 216

A company is planning a logical design for a VMware Aria Automation project. The company has the following requirements.
The company wants to provision virtual machines using intelligent workload placement.
The company wants to use the least administrative effort in their tagging strategy.
The company wants to integrate VMware Aria Automation and VMware Aria Operations.
Developers plan to code locally and centralize template version control.
Which design decision would achieve the requirements?

- A. Create user defined tags, configure binback placement policy, add integration using internal repository for importing templates and Sync
- B. Use pre-created vCenter tags, configure spread placement policy, use user defined tags, create a token and add integration using external repository for templates and Sync
- C. Use pre-created vCentertags, configure advanced placement policy, use discovered tags, create a token and add integration using external repository for templates and Sync
- D. Create user defined tags, use default placement policy, add integration using external repository for importing templates and Sync

Answer: C

Explanation:
Pre-created vCenter tags and discovered tags minimize administrative effort. Advanced placement policy enables intelligent workload placement. Integration with an external repository and sync supports developer workflows for centralized template version control.

NEW QUESTION # 217
A cloud architect is tasked with designing a vRealize Automation blueprint solution for a three-tier Web application deployment for a vSphere-based private cloud.
The application performance team would like to use vSphere DRS anti-affinity rules to ensure virtual machine instances in the blueprint are NOT run in same host for any deployment instance. There are enough hosts available for separate virtual machines.
What should the architect recommend to meet the requirements of the scenario?

- A. Display pre-defined deployment custom properties for anti-affinity rules so that users can enter correct values at request time.
- B. At the appropriate Event Broker state, execute a vRealize Orchestrator workflow to create DRS anti- affinity rules in vSphere.
- C. Define vRealize Automation pre-defined custom properties and add them with correct values to the blueprint.
- D. Pre-create anti-affinity rules per VMware Validated Design.
Answer: B

NEW QUESTION # 218
......

In this knowledge-dominated world, the combination of the knowledge and the practical working competences has been paid high attention to is extremely important. If you want to improve your practical abilities you can attend the certificate examination. Our 3V0-32.23 exam questions are compiled by experts and approved by authorized personnel and boost varied function so that you can learn 3V0-32.23 Test Torrent conveniently and efficiently. Our passing rate is 98%-100% and there is little possibility for you to fail in the exam. But if you are unfortunately to fail in the exam we will refund you in full immediately.
