1 / 7

P.S. Kostenlose 2025 VMware 3V0-41.22 Prüfungsfragen sind auf Google Drive freigegeben von ZertSoft verfügbar:
https://drive.google.com/open?id=1qdP1vDfglV27FcPd2FLvgSL_dlbqchKs

Das Zertifikat für VMware 3V0-41.22 bedeutet einen neuen Meilenstein im Leben. Mit dem bekommt man mehr berufliche Aufstiegschancen und bessere Arbeitsaussichten. Daher träumt jeder IT-Fachmann davon. Es ist allen bekannt, dass solche VMware 3V0-41.22 Prüfung schwer zu bestehen ist. In der Tat ist es auch so, zahlreiche Prüflinge fallen in der Prüfung durch. Wenn man sich gar nicht um die Prüfung bemüht, fällt einem noch schwerer. Die VMware 3V0-41.22 Zertifizierungsprüfung verlangt jedoch umfangreiche Fachkenntnisse. Unser ZertSoft bietet Ihnen einen kürzeren Weg zu der VMware 3V0-41.22 Zertifizierung. Auf unserer Website gibt es viele Prüfungsmaterialien für die VMware 3V0-41.22 Zertifizierung, die Ihnen zum Bestehen der Prüfung unter Garantie helfen. Außerdem können Sie dabei viel Zeit ersparen. So ist es Ihnen ganz preisgünstig, dass man per ZertSoft mit weniger Zeit und Geld ein wertvolles Zertifikat bekommt.

Warum sind die Fragenkataloge zur VMware 3V0-41.22 Zertifizierungsprüfung von ZertSoft beliebter als die anderen? Erstens: Resonanz. Wir müssen die Bedürfnisse der Kandidaten kennen, und umfassender als andere Websites. Zweitens: Spezialität. Um unsere Angelegenheiten zu erledigen, müssen wir alle unwichtigen Chancen aufgeben. Drittens: Man wird vielleicht eine Sache nach ihrem Aussehen beurteilen. Vielleicht haben wir die besten Produkte von guter Qualität. Aber wenn wir sie in einer kitschig Weise repräsentieren, werden Sie sicher zu den kitschigen Produkten gehören. Hingegen repräsentieren wir sie in einer fachlichen und kreativen Weise werden wir die besten Effekte erzielen. Die Fragenkataloge zur VMware 3V0-41.22 Zertifizierungsprüfung von ZertSoft sind solche erfolgreichen Fragenkataloge.

3V0-41.22 Pass Dumps & PassGuide 3V0-41.22 Prüfung & 3V0-41.22 Guide

Sind Sie IT-Fachmann? Wollen Sie Erfolg? Dann kaufen Sie die Schulungsunterlagen zur VMware 3V0-41.22 Zertifizierungsprüfung von ZertSoft. Sie werden von der Praxis geprüft. Sie werden Ihnen helfen, die VMware 3V0-41.22 Zertifizierungsprüfung zu bestehen. Ihre Berufsaussichten werden sich sicher verbessern. Sie werden ein hohes Gehalt beziehen. Sie können eine Karriere in der internationalen Gesellschaft machen. Wenn Sie spitze technischen Fähigkeiten haben, sollen Sie sich keine Sorgen machen. Die Schulungsunterlagen zur VMware 3V0-41.22 Zertifizierungsprüfung von ZertSoft werden Ihren Traum verwirklichen. Wir werden mit Ihnen durch dick und dünn gehen und die Herausforderung mit Ihnen zusammen nehmen.

Die VMware 3V0-41.22: Advanced Deploy VMware NSX-T Data Center 3.X-Prüfung ist darauf ausgelegt, fortgeschrittene Fähigkeiten bei der Bereitstellung, Konfiguration und Verwaltung komplexer NSX-T Data Center-Umgebungen zu validieren. Die Prüfung ist eine der beliebtesten Zertifizierungsprüfungen von VMware und bestätigt, dass Einzelpersonen unternehmensweite NSX-T Data Center-Lösungen implementieren können. Diese Prüfung richtet sich an Fachleute mit umfangreicher Erfahrung in Netzwerk- und Virtualisierungstechnologien und die bereits als NSX-T Data Center 2.X-zertifizierte Fachleute akkreditiert sind.

VMware Advanced Deploy VMware NSX-T Data Center 3.X 3V0-41.22 Prüfungsfragen mit Lösungen (Q13-Q18):

13. Frage

SIMULATION

Task 8

You are tasked With troubleshooting the NSX IPSec VPN service Which has been reported down. Verify the current NSX configuration is deployed and resolve any issues.

You need to:

* Verify the present configuration as provided below:

NSX IPSec Session Name:	ipsec
Remote IP:	192.168.140.2
Local Networks:	10.10.10.0/24
Remote Networks:	10.10.20.0/24
Pre-shared Key:	VMware!!VMware!!

Complete the requested task.

Notes: Passwords are contained in the user_readme.txt. This task is not dependent on another. This task Should take approximately 15 minutes to complete.

Antwort:

Begründung:

See the Explanation part of the Complete Solution and step by step instructions Explanation:

To troubleshoot the NSX IPSec VPN service that has been reported down, you need to follow these steps:

Log in to the NSX Manager UI with admin credentials. The default URL is <https://<nsx-manager-ip-address>>.

Navigate to Networking > VPN > IPSec VPN and select the IPSec VPN session that is down. You can identify the session by its name, local endpoint, remote endpoint, and status.

Click Show IPSec Statistics and view the details of the IPSec VPN session failure. You can see the error message, the tunnel state, the IKE and ESP status, and the statistics of the traffic sent and received.

Compare the configuration details of the IPSec VPN session with the expected configuration as provided below. Check for any discrepancies or errors in the parameters such as local and remote endpoints, local and remote networks, IKE and ESP profiles, etc.

If you find any configuration errors, click Actions > Edit and modify the parameters accordingly. Click Save to apply the changes.

If you do not find any configuration errors, check the connectivity and firewall rules between the local and remote endpoints. You can use ping or traceroute commands from the NSX Edge CLI to test the connectivity. You can also use show service ipsec command to check the status of IPSec VPN service on the NSX Edge.

If you find any connectivity or firewall issues, resolve them by adjusting the network settings or firewall rules on the NSX Edge or the third-party device.

After resolving the issues, verify that the IPSec VPN session is up and running by refreshing the IPSec VPN page on the NSX Manager UI. You can also use show service ipsec sp and show service ipsec sa commands on the NSX Edge CLI to check the status of security policy and security association for the IPSec VPN session.

14. Frage

Task 14

An administrator has seen an abundance of alarms regarding high CPU usage on the NSX Managers. The administrator has successfully cleared these alarms numerous times in the past and is aware of the issue. The administrator feels that the number of alarms being produced for these events is overwhelming the log files.

You need to:

- * Review CPU Sensitivity and Threshold values.

Complete the requested task.

Notes: Passwords are contained in the user_readme.txt. This task is not dependent on other tasks. This task should take approximately 5 minutes to complete.

Antwort:

Begründung:

See the Explanation part of the Complete Solution and step by step instructions.

Explanation

To review CPU sensitivity and threshold values, you need to follow these steps:

Log in to the NSX Manager UI with admin credentials. The default URL is

<https://<nsx-manager-ip-address>>.

Navigate to System > Settings > System Settings > CPU and Memory Thresholds.

You will see the current values for CPU and memory thresholds for NSX Manager, NSX Controller, and NSX Edge. These values determine the percentage of CPU and memory usage that will trigger an alarm on the NSX Manager UI.

You can modify the default threshold values by clicking Edit and entering new values in the text boxes.

For example, you can increase the CPU threshold for NSX Manager from 80% to 90% to reduce the number of alarms for high CPU usage. Click Save to apply the changes.

You can also view the historical data for CPU and memory usage for each component by clicking View Usage History. You can select a time range and a granularity level to see the usage trends and patterns over time

15. Frage

SIMULATION

Task 2

You are asked to deploy three Layer 2 overlay-backed segments to support a new 3-tier app and one Layer 2 VLAN-backed segment for support of a legacy application. The logical segments must block Server DHCP requests. Ensure three new overlay-backed segments and one new VLAN-backed logical segment are deployed to the RegionA01-COPMOI compute cluster. All configuration should be done utilizing the NSX UI.

You need to:

• Configure a new segment security profile to block DHCP requests. All other segment security features should be disabled. Use the following configuration detail:	
Name:	DHCP-block
DHCP:	DHCP server block enabled

• Configure a new overlay backed segment for Web server with the following configuration detail:	
Name:	LAX-web
Segment security policy:	DHCP-block
Transport Zone:	TZ-Overlay-1

• Configure a new overlay backed segment for DB server with the following configuration detail:	
Name:	LAX-db
Segment security policy:	DHCP-block
Transport Zone:	TZ-Overlay-1

• Configure a new VLAN backed segment for legacy server with the following configuration detail:	
Name:	Phoenix-VLAN
VLAN ID:	0
Segment security policy:	DHCP-block
Transport Zone:	TZ-VLAN-1

• Configure a new VLAN backed segment for Edge uplink with the following configuration detail:	
Name:	Uplink
VLAN ID:	0
Segment security policy:	DHCP-block
Transport Zone:	TZ-Uplink

Complete the requested task.

Notes: Passwords are contained in the user_readme.txt. Task 2 is dependent on the completion of Task 1. Other tasks are

dependent on completion of this task. You may want to move to the next tasks while waiting for configuration changes to be applied. This task should take approximately 10 minutes to complete.

Antwort:

Begründung:

See the Explanation part of the Complete Solution and step by step instructions Explanation:

To deploy three layer 2 overlay-backed segments and one layer 2 VLAN-backed segment, you need to follow these steps:

Log in to the NSX Manager UI with admin credentials. The default URL is <https://<nsx-manager-ip-address>>.

Navigate to Networking > Segments and click Add Segment.

Enter a name for the segment, such as Web-01.

Select Tier-1 as the connectivity option and choose an existing tier-1 gateway from the drop-down menu or create a new one by clicking New Tier-1 Gateway.

Enter the gateway IP address of the subnet in a CIDR format, such as 192.168.10.1/24.

Select an overlay transport zone from the drop-down menu, such as Overlay-TZ.

Optionally, you can configure advanced settings such as DHCP, Metadata Proxy, MAC Discovery, or QoS for the segment by clicking Set Advanced Configs.

Click Save to create the segment.

Repeat steps 2 to 8 for the other two overlay-backed segments, such as App-01 and DB-01, with different subnet addresses, such as 192.168.20.1/24 and 192.168.30.1/24.

To create a VLAN-backed segment, click Add Segment again and enter a name for the segment, such as Legacy-01.

Select Tier-0 as the connectivity option and choose an existing tier-0 gateway from the drop-down menu or create a new one by clicking New Tier-0 Gateway.

Enter the gateway IP address of the subnet in a CIDR format, such as 10.10.10.1/24.

Select a VLAN transport zone from the drop-down menu, such as VLAN-TZ, and enter the VLAN ID for the segment, such as 100.

Optionally, you can configure advanced settings such as DHCP, Metadata Proxy, MAC Discovery, or QoS for the segment by clicking Set Advanced Configs.

Click Save to create the segment.

To apply a segment security profile to block DHCP requests on the segments, navigate to Networking > Segments > Segment Profiles and click Add Segment Profile.

Select Segment Security as the profile type and enter a name and an optional description for the profile.

Toggle the Server Block and Server Block - IPv6 buttons to enable DHCP filtering for both IPv4 and IPv6 traffic on the segments that use this profile.

Click Save to create the profile.

Navigate to Networking > Segments and select the segments that you want to apply the profile to.

Click Actions > Apply Profile and select the segment security profile that you created in step 18.

Click Apply to apply the profile to the selected segments.

You have successfully deployed three layer 2 overlay-backed segments and one layer 2 VLAN-backed segment with DHCP filtering using NSX-T Manager UI.

16. Frage

SIMULATION

Task 7

you are asked to create a custom QoS profile to prioritize the traffic on the phoenix-VLAN segment and limit the rate of ingress traffic.

You need to:

* Create a custom QoS profile for the phoenix-VLAN using the following configuration detail:

• Create a custom QoS profile for the phoenix-VLAN using the following configuration detail:	
Name:	ingress-phoenix-qos-profile
Priority:	0
Class of Service:	0
Ingress traffic rate limits:	100 Mbps for average, 200 Mbps for peak

* Apply the profile on the 'phoenix-VLAN' segment

Complete the requested task.

Notes: Passwords are contained in the user_readme.txt.

take approximately 5 minutes to complete.

Subsequent tasks may require the completion of this task. This task should

Antwort:

Begründung:

See the Explanation part of the Complete Solution and step by step instructions Explanation:

To create a custom QoS profile to prioritize the traffic on the phoenix-VLAN segment and limit the rate of ingress traffic, you need to follow these steps:

Log in to the NSX Manager UI with admin credentials. The default URL is <https://<nsx-manager-ip-address>>.

Navigate to Networking > Segments > Switching Profiles and click Add Switching Profile. Select QoS as the profile type.

Enter a name and an optional description for the QoS profile, such as phoenix-QoS.

In the Mode section, select Untrusted as the mode from the drop-down menu. This will allow you to set a custom DSCP value for the outbound IP header of the traffic on the segment.

In the Priority section, enter 46 as the DSCP value. This will mark the traffic with Expedited Forwarding (EF) per-hop behavior, which is typically used for high-priority applications such as voice or video.

In the Class of Service section, enter 5 as the CoS value. This will map the DSCP value to a CoS value that can be used by VLAN-based logical ports or physical switches to prioritize the traffic.

In the Ingress section, enter 1000000 as the Average Bandwidth in Kbps. This will limit the rate of inbound traffic from the VMs to the logical network to 1 Mbps.

Optionally, you can also configure Peak Bandwidth and Burst Size settings for the ingress traffic, which will allow some burst traffic above the average bandwidth limit for a short duration.

Click Save to create the QoS profile.

Navigate to Networking > Segments and select the phoenix-VLAN segment that you want to apply the QoS profile to.

Click Actions > Apply Profile and select phoenix-QoS as the switching profile that you want to apply to the segment.

Click Apply to apply the profile to the segment.

You have successfully created a custom QoS profile and applied it to the phoenix-VLAN segment.

17. Frage

SIMULATION

Task 10

You have been notified by the Web Team that they cannot get to any northbound networks from their Tampa web servers that are deployed on an NSX-T network segment. The Tampa web VM's however can access each other.

You need to:

* Troubleshoot to find out why the Tampa web servers cannot communicate to any northbound networks and resolve the issue.

Complete the requested task. TO verify your work. ping the Control Center @ 192.168.110.10 Notes: Passwords are contained in the user_readme.txt. This task is dependent on Task 4. Some exam candidates may have already completed this task if they had done more than the minimum required in Task 4. This task should take approximately 15 minutes to complete.

Antwort:

Begründung:

See the Explanation part of the Complete Solution and step by step instructions Explanation:

To troubleshoot why the Tampa web servers cannot communicate to any northbound networks, you need to follow these steps:

Log in to the NSX Manager UI with admin credentials. The default URL is <https://<nsx-manager-ip-address>>.

Navigate to Networking > Tier-0 Gateway and select the tier-0 gateway that connects the NSX-T network segment to the northbound networks. For example, select T0-GW-01.

Click Interfaces > Set and verify the configuration details of the interfaces. Check for any discrepancies or errors in the parameters such as IP address, subnet mask, MTU, etc.

If you find any configuration errors, click Edit and modify the parameters accordingly. Click Save to apply the changes.

If you do not find any configuration errors, check the connectivity and firewall rules between the tier-0 gateway and the northbound networks. You can use ping or traceroute commands from the NSX Edge CLI or the vSphere Web Client to test the connectivity.

You can also use show service router command to check the status of the routing service on the NSX Edge.

If you find any connectivity or firewall issues, resolve them by adjusting the network settings or firewall rules on the NSX Edge or the northbound devices.

After resolving the issues, verify that the Tampa web servers can communicate to any northbound networks by pinging the Control Center @ 192.168.110.10 from one of the web servers.
