VMware NSX 4.x Advanced Design Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which three choices are part of a Design Approach when discussing design alternatives and their effects?(Choose three.)

- A. Cost
- B. Knowledge
- C. Backup
- D. Performance
- E. Security
- F. Budget

Answer: A,D,F

Explanation:

- * Key Design Considerations (Correct Answers - B, C, E):
 - * Budget:Determineshardware, licensing, and NSX deployment costs.
 - * Cost:AffectsNSX scalability, high availability, and feature selection.
 - * Performance:Definesbandwidth requirements, throughput, and overlay network efficiency.
 - * Incorrect Options:
 - * (A - Backup):
 - * Backup is anoperational consideration, not a design alternative.
 - * (D - Knowledge):
 - * Whileengineers need NSX knowledge, this is not a technical design factor.
 - * (F - Security):
 - * Security isimportantbut should be integrated into budget and performance discussions.
- VMware NSX 4.x Reference:
- * NSX-T Design and Architecture Best Practices

NEW QUESTION # 25

Physical design in a VMware environment is concerned with?

- A. The design of the company logo
- B. The aesthetics of the user interface
- C. The specific hardware and software components
- D. The abstract concepts behind the system architecture

Answer: C

NEW QUESTION # 26

A Network Solutions Architect is tasked with designing an optimized and high-performing NSX solution, keeping in mind the need for DPU-based acceleration. The architect needs to consider the use of Geneve Offload, Receive Side Scaling (RSS), Geneve Rx Filters, SSL Offload, and the effects of Multi- TEP, MTU size, and NIC speed on throughput. Furthermore, the architect also needs to consider the key performance factors for compute nodes and NSX Edge nodes.

As the company's traffic continues to surge, there's a requirement to ensure NSX Edge nodes can handle the increasing load.

Which of the following factors should primarily be considered for performance optimization?

- A. The number of NSX Edge Node uplinks
- B. The NSX Edge VM node size
- C. The available storage for the cluster
- D. The number of ESXi hosts

Answer: B

Explanation:

- * NSX Edge VM Node Size for Performance Optimization (Correct Answer - A):
- * NSX Edge VM sizedeterminesCPU, memory, and throughput capacity.
- * Larger Edge nodes(Large/Extra Large) supporthigher bandwidth, more services, and faster packet processing.

- * NSX Advanced Load Balancer and Firewall policies consume Edge CPU cycles, requiring proper sizing
- * Incorrect Options:
- * (B - Available Storage):
- * Storage capacity does not directly impact NSX Edge performance.
- * (C - Number of ESXi Hosts):
- * More hosts improve NSX resiliency, but do not increase Edge performance.
- * (D - Number of NSX Edge Uplinks):
- * Multi-TEP and high-speed NICs improve performance, but Edge node size is the primary factor.

NEW QUESTION # 27

Which three of the following are components of switch fabric design? (Choose three.)

- A. Middle-of-rack switch
- B. Leaf switch
- C. End-of-rack switch
- D. Top-of-rack switch
- E. Spine switch

Answer: B,D,E

Explanation:

- * Spine-Leaf Architecture (Correct Answers - A, C, D):
- * Top-of-Rack (ToR) Switch: Connects ESXi hosts and NSX transport nodes within a rack.
- * Spine Switch: Acts as the core switch layer, interconnecting all leaf switches for high-performance network fabric.
- * Leaf Switch: Connects ToR switches and compute nodes to the spine layer, forming a scalable fabric.
- * Incorrect Options:
- * (B - Middle-of-Rack Switch):
- * This is not a standard networking design term.
- * (E - End-of-Rack Switch):
- * Similar to Top-of-Rack switches, but typically not used in modern Spine-Leaf designs.
- VMware NSX 4.x Reference:
- * NSX-T Physical Networking Guide
- * NSX-T Spine-Leaf Fabric Architecture Best Practices

NEW QUESTION # 28

Which of the following would be an example of an assumption that a solutions architect needs to consider in the design of an NSX solution?

- A. The customer requires support for virtualized workloads across multiple hypervisors.
- B. The customer has limited resources available for the implementation, such as personnel or hardware.
- C. The customer thinks that NSX will be able to integrate with their existing infrastructure.
- D. The customer wants to be able to scale the NSX solution as their business grows.

Answer: C

Explanation:

1. Understanding Assumptions in NSX Design
 - * Assumptions are conditions that are expected to be true but have not been verified.
 - * A good NSX design requires assumptions to be validated before deployment to avoid unexpected issues.
2. Why "Customer Assumes NSX Will Integrate with Existing Infrastructure" is Correct (A)
 - * Integration with existing infrastructure (e.g., physical networks, firewalls, cloud providers) must be validated.
 - * Assuming compatibility without testing can cause deployment failures or feature limitations.
 - * Common integration challenges include: VLAN scalability, MTU size mismatch, or unsupported physical networking hardware.
3. Why Other Options are Incorrect
 - * (B - Requirement for Multi-Hypervisor Support):
 - * This is a defined requirement, not an assumption.

- * (C - Scalability Needs):
 - * This is a business requirement, not an assumption.
 - * (D - Limited Resources):
 - * This is a constraint that affects the deployment, not an assumption.
4. NSX Design Considerations for Infrastructure Integration
- * Perform a thorough assessment of existing hardware and network compatibility.
 - * Validate the interoperability of NSX with third-party services (firewalls, storage, monitoring tools).
 - * Plan for phased integration testing to reduce risks.
- VMware NSX 4.x Reference:
- * NSX-T Interoperability and Integration Guide
 - * VMware Validated Design (VVD) for NSX Integration
