The migration is estimated to take 20 months to complete but might extend an additional 10 months if issues arise. All connectivity options meet the requirements to migrate workloads.

Which transport technology provides the best ROI based on cost and flexibility?

- A. MPLS
- B. DWDM over dark fiber
- C. CWDM over dark fiber
- **D. Metro Ethernet**

Answer: D

NEW QUESTION # 337

- A. Restrict keywork in IPSEC Tunnel.
- B. Classify and Mark duplicate sequence packets.
- **C. Apply anti-replay window 4096.**
- D. Increase QoS shape policy.

Answer: C

NEW QUESTION # 339

A senior network designer suggests that you should improve network convergence times by reducing BGP timers between your CE router and the PE router of the service provider. Which two factors should you consider to adjust the timer values? (Choose two.)

- A. number of routes on the CE router
- B. manual updates to the peer groups
- C. number of VRFs on the PE router
- D. service provider agreement to support tuned timers
- E. service provider scheduling of changes to the PE

Answer: D,E

Explanation:

Reducing BGP keepalive and hold timers can help improve convergence but must be done carefully in provider-managed networks:

* A: The service provider must agree to support modified timers on both PE and CE; otherwise, mismatched timer settings can break neighbor relationships.

* C: The service provider may need to schedule configuration changes on PE routers to synchronize the timer adjustments and avoid service interruptions.

Why other options are incorrect:

* B: Peer groups simplify policy application but do not impact BGP timers directly.

* D: The number of routes affects convergence processing but not directly tied to timer adjustment.

* E: The number of VRFs is a scalability consideration but unrelated to BGP timer negotiation.

NEW QUESTION # 340

Refer to the exhibit.

Company XYZ BGP topology is as shown in the diagram. The interface on the LA router connected toward the 10.1.5.0/24 network is faulty and is going up and down, which affects the entire routing domain. Which routing technique can the network administrator use so that the rest of the network is not affected by the flapping issue?

- A. The LA administrator should use route dampening for the 10.1.5.0/24 network so that it does not get propagated when it flaps up and down.
- B. The LA administrator should use route filtering to block the 10.1.5.0/24 network from getting propagated toward Chicago and New York.
- C. The LA administrator should use route aggregation to summarize the 10.1.4.0/24, 10.1.5.0/24, 10.1.6.0/24, and 10.1.7.0/24 networks toward Chicago
- D. The Chicago administrator should use route filtering to block the 10.1.5.0/24 network from coming in from the LA router.

Answer: A
