

400-007 New Test Camp & 400-007 Reliable Test Pattern

BONUS!!! Download part of TorrentValid 400-007 dumps for free: https://drive.google.com/open?id=1lg0aOE_3Bmar4Zv2TKl2-p66reALBSj0

Our 400-007 exam dumps are required because people want to get succeed in IT field by clearing the certification exam. Passing 400-007 practice exam is not so easy and need to spend much time to prepare the training materials, that's the reason that so many people need professional advice for 400-007 Exam Prep. The 400-007 dumps pdf are the best guide for them passing test.

The 400-007 practice questions offered by TorrentValid is the latest and valid 400-007 study material which suitable for all of you. Our free demo is especially for you to free download for try before you buy. Improve your professional ability with our 400-007 certification. Getting qualified by the certification will position you for better job opportunities and higher salary. Now, let's start your preparation with our 400-007 Training Material. You can get a lot from the simulate 400-007 exam guide and get your certification easily.

Cisco 400-007 Reliable Test Pattern | Valid 400-007 Exam Simulator

Forget complaining for your failure. Please think about why there are candidates to pass exam every day. Option is more important than effort sometimes. Cisco 400-007 reliable exam collection pdf are being searched about 100,000 in the website every day. There are more than 600 candidates choosing valid Cisco 400-007 reliable exam collection pdf every day. We help thousands of people clear exams every year. The success is close at hand, why do you grab it?

Cisco 400-007 exam is intended for senior network designers and architects who have extensive experience in designing complex network solutions. 400-007 exam is also suitable for individuals who aspire to become network designers and want to demonstrate their expertise in this field. Candidates who pass the Cisco 400-007 Exam are eligible to take the CCDE practical exam, which evaluates their ability to design and implement network solutions in a real-world environment.

Cisco Certified Design Expert (CCDE v3.0) Written Exam Sample Questions (Q236-Q241):

NEW QUESTION # 236

Which design consideration is valid when you contrast FabricPath and TRILL?

- A. FabricPath permits active-active FHRP and TRILL supports anycast gateway
- B. FabricPath permits ECMP, but TRILL does not
- C. FabricPath uses IS-IS, but TRILL uses VXLAN
- D. FabricPath permits active-active mode, but TRILL supports only active-standby mode

Answer: A

Explanation:

Both FabricPath and TRILL are Layer 2 multipath technologies designed to eliminate spanning tree and allow for efficient forwarding across Layer 2 fabrics using routing techniques:

* B (FabricPath permits active-active FHRP and TRILL supports anycast gateway): FabricPath (Cisco proprietary) integrates with vPC+ to allow active-active First Hop Redundancy Protocol (FHRP) operation at the access layer. This enables multiple default gateways to operate simultaneously, improving resiliency and utilization. TRILL (IEEE standard) uses anycast gateway functionality natively, where multiple switches share the same IP and MAC address for default gateway, allowing hosts to forward to any available gateway, providing active-active behavior at Layer 3.

Other options explained:

* A: Incorrect - both FabricPath and TRILL are based on IS-IS for control plane operations; VXLAN is not part of TRILL.

* C: Incorrect - both FabricPath and TRILL support ECMP (Equal Cost Multi-Path) to utilize multiple paths efficiently.

* D: Incorrect - both technologies allow active-active forwarding at Layer 2.

This comparison highlights CCDE v3.1 design expertise in data center fabric architectures and control plane technologies.

NEW QUESTION # 237

Which three tools are used for ongoing monitoring and maintenance of a voice and video environment?

(Choose three.)

- A. Passive monitoring via synthetic probes to measure loss, latency, and jitter
- **B. Call management analysis to identify CAC failures and call quality issues**
- **C. Active monitoring via synthetic probes to measure loss, latency, and jitter**
- **D. Flow-based analysis to measure bandwidth mix of applications and their flows**
- E. Flow-based analysis with PTP time-stamping to measure loss, latency, and jitter
- F. Call management analysis to identify network convergence-related failures

Answer: B,C,D

Explanation:

* A: Flow-based analysis allows understanding bandwidth usage across apps and sessions, crucial for voice/video capacity management.

* C: Call management systems track CAC and call quality failures, key for voice/video troubleshooting.

* D: Active synthetic probes proactively inject traffic to monitor loss, latency, and jitter under real-time conditions.

Why other options are incorrect:

* B: Network convergence is not directly analyzed through call management tools.

* E: Passive synthetic probes is not an accurate term; passive monitoring refers to analysis of real traffic flows, not synthetic tests.

* F: PTP time-stamping is more applicable to clock synchronization, not regular voice/video performance monitoring.

NEW QUESTION # 238

A service provider recently migrated to an SD-WAN solution for delivering WAN connections to its customers. One of the main challenges with the SD-WAN deployment is that branch site volume increases every year, which causes management complexity. Which action resolves the issue?

- A. Adopt a well-structured SD-WAN service management lifecycle model.
- B. Set up a dedicated team to monitor and provision new customers.
- **C. Build a service orchestration platform on top of the network controller.**
- D. Implement a scalable network management system to manage all sites.

Answer: C

Explanation:

* C (Service orchestration platform): As branch scale increases, orchestration platforms automate multi-site deployment, configuration, and policy management. They integrate with controllers and external systems to reduce manual intervention, improve scalability, and enforce service consistency across thousands of locations.

Other options explained:

* A: Management systems assist monitoring but don't address provisioning complexity.

* B: Lifecycle models guide processes but are not technical automation solutions.

* D: Manual teams are not scalable for high-volume growth.

NEW QUESTION # 239

Refer to the table.

CONNECTIVITY	CAPEX	OPEX ANNUAL	INSTALLATION FEE	TERM
DWDM over dark fiber	\$250,000	\$100,000	\$30,000	60 months
CWDM over dark fiber	\$150,000	\$100,000	\$25,000	60 months
MPLS	\$50,000	\$150,000	\$75,000	12 months
Metro Ethernet	\$45,000	\$125,000	\$5,000	36 months

A customer investigates connectivity options for a DCI between two production data centers. The solution must provide dual 10G connections between locations with no single points of failure for Day 1 operations. It must also include an option to scale for up to 20 resilient connections in the second year to accommodate isolated SAN over IP and isolated, dedicated replication IP circuits. All connectivity methods are duplex 10 Gbps. Which transport technology costs the least over two years, in the scenario?

- A. DWDM
- B. MPLS
- C. CWDM
- **D. Metro Ethernet**

Answer: D

NEW QUESTION # 240

What is a connection service inside a data center that provides direct connectivity to a cloud provider?

- A. Cloud onRamp
- B. Carrier-neutral facility
- **C. Cloud direct connect**
- D. Cloud gateway

Answer: C

NEW QUESTION # 241

.....

TorrentValid Cisco 400-007 pdf questions have been marked as the topmost source for the preparation of 400-007 new questions by industry experts. These questions cover every topic in the exam, and they have been verified by Cisco professionals. Moreover, you can download the Cisco Certified Design Expert (CCDE v3.0) Written Exam (400-007) pdf questions demo to get a better analysis of the exam. By practicing with these questions, you can assess your preparation for the Cisco 400-007 new questions.
