The Network Appliance NS0-005 mock tests are specially built for you to evaluate what you have studied. These NetApp Technology Solutions Professional Exam (NS0-005) practice exams (desktop and web-based) are customizable, which means that you can change the time and questions according to your needs. Our NetApp Technology Solutions Professional Exam (NS0-005) practice tests teach you time management so you can pass the NetApp Technology Solutions Professional Exam (NS0-005) certification exam.

Network Appliance NetApp Technology Solutions Professional Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

What are two NetApp on-premises data storage systems that can be discovered and managed in NetApp BlueXP? (Choose two.)

- A. StorageGRID

- B. Element clusters
- C. E-Series
- D. Astra Data Store

Answer: A,C

NEW QUESTION # 44

A company wants to reduce their on-premises footprint by tiering cold data to a more cost-effective location. Which IMetApp ONTAP feature can be used?

- A. FlexGroup
- B. SVM DR
- C. SnapVault
- D. FabricPool

Answer: D

NEW QUESTION # 45

You are tiering data from your primary NetApp ONTAP cluster to StorageGRID. In this scenario, which statement about FabricPool licensing is correct?

- A. The FabricPool license is Included with the NetApp ONTAP bundle.
- B. Each cluster purchased by a user includes a single 10 TB FabricPool license.
- C. There is no way to increase the capacity of a FabricPool license after the Initial purchase.
- D. A FabricPool license is not required.

Answer: B

NEW QUESTION # 46

What are two data types? (Choose two.)

- A. object
- B. LAN
- C. RAID
- D. disk
- E. file

Answer: A,E

Explanation:

A file is a data type that represents a collection of data stored on a disk or other storage device. A file can have a name, an extension, a size, and other attributes. A file can contain any kind of data, such as text, images, audio, video, etc. A file can be opened, read, written, closed, deleted, or moved by a program. An object is a data type that represents an instance of a class, which is a blueprint for creating objects. An object can have properties, which are variables that store data, and methods, which are functions that perform actions on the object. An object can interact with other objects by sending and receiving messages. An object can inherit properties and methods from its parent class, or override them with its own definitions.
