PECB Certified ISO/IEC 27001 Lead Implementer Exam Sample Questions (Q141-Q146):

NEW QUESTION # 141

Scenario 6: Skyver manufactures electronic products, such as gaming consoles, flat-screen TVs, computers, and printers. In order to ensure information security, the company has decided to implement an information security management system (ISMS) based on ISO/IEC 27001.

Colin, the company's information security manager, decided to conduct a training and awareness session for the company's staff about the information security risks and the controls implemented to mitigate them. The session covered various topics, including Skyver's information security approaches, techniques for mitigating phishing and malware, and a dedicated segment on securing cloud infrastructure and services. This particular segment explored the shared responsibility model and concepts such as identity and access management in the cloud. Colin organized the training and awareness sessions through engaging presentations, interactive discussions, and practical demonstrations to ensure that the personnel were well-informed by security principles and practices. One of the participants in the session was Lisa, who works in the HR Department. Although Colin explained Skyver's information security policies and procedures in an honest and fair manner, she found some of the issues being discussed too technical and did not fully understand the session. Therefore, in many cases, she would request additional help from the trainer and her colleagues. In a supportive manner, Colin suggested Lisa consider attending the session again.

Skyver has been exploring the implementation of AI solutions to help understand customer preferences and provide personalized recommendations for electronic products. The aim was to utilize AI technologies to enhance problem-solving capabilities and provide suggestions to customers. This strategic initiative aligned with Skyver's commitment to improving the customer experience through data-driven insights.

Additionally, Skyver looked for a flexible cloud infrastructure that allows the company to host certain services on internal and secure infrastructure and other services on external and scalable platforms that can be accessed from anywhere. This setup would enable various deployment options and enhance information security, crucial for Skyver's electronic product development.

According to Skyver, implementing additional controls in the ISMS implementation plan has been successfully executed, and the company was ready to transition into operational mode. Skyver assigned Colin the responsibility of determining the materiality of this change within the company.

Based on the scenario above, answer the following question:

Did Skyver assign the adequate person for determining the materiality of the transition into operational mode of the ISMS?

- A. No, the ISMS implementation team should be responsible for this decision
- B. No, the top management should be responsible for this decision
- C. Yes, the materiality of this change should be decided by the information security manager

Answer: C

NEW QUESTION # 142

According to ISO/IEC 27001 controls, when planning audit tests and assurance activities involving operational systems, who should be involved in the agreement process except the tester?

- A. The appropriate management
- B. The board of directors
- C. The top management

Answer: A

NEW QUESTION # 143

An organization that has an ISMS in place conducts management reviews at planned intervals, but does not retain documented

information on the results. Is this in accordance with the requirements of ISO/IEC 27001?

- A. Yes. ISO/IEC 27001 does not require organizations to document the results of management reviews
- **B. No, ISO/IEC 27001 requires organizations to document the results of management reviews**
- C. Yes. ISO/IEC 27001 requires organizations to document the results of management reviews only if they are conducted ad hoc

Answer: B

Explanation:

According to ISO/IEC 27001:2022, clause 9.3.3, the organization must retain documented information as evidence of the results of management reviews. The results of management reviews must include decisions and actions related to the ISMS policy, objectives, risks, opportunities, resources, and communication.

Documenting the results of management reviews is important to ensure the accountability, traceability, and effectiveness of the ISMS. It also helps the organization to monitor and measure the performance and improvement of the ISMS, and to demonstrate compliance with the requirements of ISO/IEC 27001:2022.

Therefore, an organization that has an ISMS in place and conducts management reviews at planned intervals, but does not retain documented information on the results, is not in accordance with the requirements of ISO/IEC 27001. (From the PECB ISO/IEC 27001 Lead Implementer Course Manual, page 107) References:

* PECB ISO/IEC 27001 Lead Implementer Course Manual, page 107

* PECB ISO/IEC 27001 Lead Implementer Info Kit, page 7

NEW QUESTION # 144

Scenario 7: InfoSec is a multinational corporation headquartered in Boston, MA, which provides professional electronics, gaming, and entertainment services. After facing numerous information security incidents, InfoSec has decided to establish teams and implement measures to prevent potential incidents in the future. Emma, Bob, and Anna were hired as the new members of InfoSec's information security team, which consists of a security architecture team, an incident response team (IRT) and a forensics team. Emma's job is to create information security plans, policies, protocols, and training to prepare InfoSec to respond to incidents effectively. Emma and Bob would be full-time employees of InfoSec, whereas Anna was contracted as an external consultant. Bob, a network expert, will deploy a screened subnet network architecture. This architecture will isolate the demilitarized zone (DMZ) to which hosted public services are attached and InfoSec's publicly accessible resources from their private network. Thus, InfoSec will be able to block potential attackers from causing unwanted events inside the company's network. Bob is also responsible for ensuring that a thorough evaluation of the nature of an unexpected event is conducted, including the details on how the event happened and what or whom it might affect.

Anna will create records of the data, reviews, analysis, and reports in order to keep evidence for the purpose of disciplinary and legal action, and use them to prevent future incidents. To do the work accordingly, she should be aware of the company's information security incident management policy beforehand. Among others, this policy specifies the type of records to be created, the place where they should be kept, and the format and content that specific record types should have.

Why did InfoSec establish an IRT? Refer to scenario 7.

- A. To collect, preserve, and analyze the information security incidents
- B. To comply with the ISO/IEC 27001 requirements related to incident management
- **C. To assess, respond to, and learn from information security incidents**

Answer: C

NEW QUESTION # 145

What are the data protection principles set out in the GDPR?

- **A. Purpose limitation, proportionality, data minimisation, transparency**
- B. Target group, proportionality, transparency, data minimisation
- C. Purpose limitation, publicity, transparency, data minimisation
- D. Purpose limitation, proportionality, availability, data minimisation

Answer: A

NEW QUESTION # 146
