

Valid WGU Managing-Cloud-Security Cram Materials & Managing-Cloud-Security Authorized Exam Dumps

WGU: Managing Cloud Security Questions with Answers 2025

Infrastructure as a service (iaas) - correct answers- allows the customer to install all software, including operating systems (oss) on hardware housed and connected by the cloud vendor.

Platform as a service (paas) - correct answers- contains everything included in iaas, with the addition of oss. this model is especially useful for software development operations (devops).

Software as a service (saas) - correct answers- includes everything listed in the previous infrastructure as a service (iaas) and platform as a service (paas) models, with the addition of software programs.

Encryption - correct answers- offers a degree of assurance that nobody without authorization will be able to access your data in a meaningful way.

Cloud service provider (CSP) - correct answers- provides administrative assistance for the customer and the customer's data and processing needs. examples include amazon web services, rackspace, and microsoft's azure.

Virtualization - correct answers- a process of creating a virtual version of something, including virtual computer hardware platforms, operating systems, storage devices, and computer network resources.

Vendor lock-in - correct answers- occurs in a situation where a customer may be unable to leave, migrate, or transfer to an alternate provider due to technical or non-technical constraints.

Cloud provider - correct answers- a service provider that offers customer storage or software solutions available via a public network, usually the internet.

Cloud portability - correct answers- the ability to move applications and associated data between one cloud provider and another, or between legacy and cloud environments.

Cloud access security broker (CASB) - correct answers- a third-party entity offering independent identity and access management (IAM) services to csp's and cloud customers, often as an intermediary.

We use what to determine the critical paths, processes, and assets of an organization? - correct answers- BIA (the business impact analysis is designed to ascertain the value of the organization's assets, and learn the critical paths and processes.)

If a cloud customer wants a bare-bones environment in which to replicate their own enterprise for bc/dr purposes, which cloud service model would probably be best? - correct answers- iaas - iaas offers what is basically a hot/warm dr site, with hardware, connectivity, and utilities, allowing the customer to build out any kind of software configuration (including choosing oss).

The pressure is not terrible, and what is terrible is that you choose to evade it. You clearly have seen your own shortcomings, and you know that you really should change. Then, be determined to act! Buying our Managing-Cloud-Security exam questions is the first step you need to take. And as long as you study with our Managing-Cloud-Security Practice Guide, you will find that the exam is just a piece of cake and the certification is easy to get. With the certification, you will find your future is much brighter.

It is very normal to be afraid of the exam, especially such difficult exam like Managing-Cloud-Security exam. We know that encouragement alone cannot really improve your confidence in exam, so we provide the most practical and effective test software to help you pass the Managing-Cloud-Security Exam. You can use our samples first to experience the effect of our software, and we believe that you can realize our profession and efforts by researching and developing Managing-Cloud-Security exam software from samples of Managing-Cloud-Security.

VCETorrent WGU Managing-Cloud-Security Practice Questions are Real and Verified By Experts

Differ as a result the Managing-Cloud-Security questions torrent geared to the needs of the user level, cultural level is uneven, have a plenty of college students in school, have a plenty of work for workers, and even some low education level of people laid off, so in order to adapt to different level differences in users, the Managing-Cloud-Security Exam Questions at the time of writing teaching materials with a special focus on the text information expression, so you can understand the content of the Managing-Cloud-Security learning guide and pass the Managing-Cloud-Security exam easily.

WGU Managing Cloud Security (JY02) Sample Questions (Q105-Q110):

NEW QUESTION # 105

Which security control is a countermeasure against vendor lock-in and lock-out?

- A. Disk redundancy
- B. Offsite backups
- C. Video surveillance
- D. Training programs

Answer: B

Explanation:

Offsite backups are an effective countermeasure against vendor lock-in and lock-out risks. Managing Cloud principles explain that maintaining copies of data outside a single cloud provider reduces dependency and ensures continued access if services become unavailable.

Offsite backups enable organizations to migrate data, recover from provider outages, or exit a provider relationship without losing critical information. This control supports business continuity, portability, and resilience.

Video surveillance addresses physical security, disk redundancy improves availability within the same provider, and training programs improve awareness but do not reduce dependency. Therefore, offsite backups are the correct security control.

NEW QUESTION # 106

Which group should be notified for approval when a planned modification to an environment is scheduled?

- A. Change management board
- B. Problem management team
- C. Executive management board
- D. Event management team

Answer: A

Explanation:

The Change Management Board (CMB), also called the Change Advisory Board (CAB), is the formal authority responsible for reviewing, assessing, and approving planned modifications to IT environments. This group ensures that proposed changes align with business objectives, do not introduce unnecessary risks, and comply with security and regulatory requirements.

Event management teams focus on monitoring events, problem management teams handle root-cause analysis, and executive boards provide strategic direction but are not operational approval authorities. Only the CMB has the explicit role of validating technical and security implications before implementation.

By involving the CMB, organizations enforce structured governance, minimize disruptions, and establish accountability. This practice is central in ITIL and ISO/IEC 20000 standards, ensuring that operational integrity and security are preserved during change cycles.

NEW QUESTION # 107

Which open-source software (OSS) cloud computing platform provides a full set of features and components for a cloud environment?

- A. Apache OpenStack
- B. Hypervisor
- C. VMware vSphere
- D. Open Web Application Security Project

Answer: A

Explanation:

Apache OpenStack is an open-source cloud computing platform that provides a comprehensive set of features and components for building and managing cloud environments. Managing Cloud principles explain that OpenStack supports compute, storage, networking, identity, and orchestration services.

It enables organizations to deploy private and hybrid clouds with full control over infrastructure and security configurations. The modular architecture allows flexibility and scalability.

The other options are not full cloud platforms. A hypervisor provides virtualization, VMware vSphere is proprietary, and OWASP focuses on application security guidance. Therefore, Apache OpenStack is the correct answer.

NEW QUESTION # 108

Which item determines whether a server has the capacity and the instance allocation to meet a customer's requirements?

- A. Cloud controller
- B. Instance provider
- C. UniFi controller
- D. Cloud provider

Answer: A

Explanation:

The cloud controller determines whether a server has sufficient capacity and appropriate instance allocation to meet customer requirements. Managing Cloud principles explain that the cloud controller manages resource scheduling, provisioning, and allocation across the cloud infrastructure.

It evaluates available compute, memory, storage, and network resources before assigning workloads to physical or virtual servers.

This ensures that customer requests are fulfilled without overcommitting resources or degrading performance.

A cloud provider delivers services, an instance provider is not a standard cloud role, and a UniFi controller manages networking devices. Therefore, the cloud controller is the correct answer.

NEW QUESTION # 109

An organization is evaluating which cloud computing service model it should implement. It is considering either platform as a service (PaaS) or software as a service (SaaS). Which risk associated with SaaS can the organization avoid by choosing PaaS?

- A. Vendor lock-in
- B. Vendor lock-out
- C. Natural disaster
- D. Personnel threat

Answer: A

Explanation:

With SaaS, applications are delivered entirely by the provider, and customers have little to no control over the underlying platform or data portability. This creates a higher risk of vendor lock-in, as migrating away from one SaaS provider to another may require reworking applications or losing features.

In contrast, PaaS gives customers more flexibility by allowing them to build, deploy, and manage their own applications while relying on standardized frameworks and platforms. Because applications are customer-managed, switching providers or migrating workloads can be easier compared to SaaS.

Vendor lock-out, personnel threats, and natural disasters are risks in any service model. The key differentiator here is portability and flexibility. Choosing PaaS reduces dependence on a single provider's application features, thereby lowering vendor lock-in risk while still offloading infrastructure management.

NEW QUESTION # 110

.....

There are three different kinds of our Managing-Cloud-Security exam questions: the PDF, Software and APP online. And I love the Software for the best for no matter how many software you have installed on your computers, our Managing-Cloud-Security learning materials will never be influenced. Also, our Managing-Cloud-Security Study Guide just need to be opened with internet service for the first time. Later, you can freely take it everywhere as long as you use it in the Windows system.

Managing-Cloud-Security Authorized Exam Dumps: <https://www.vcetorrent.com/Managing-Cloud-Security-valid-vce->
