

Valid AZ-204 Exam Sample & Valid AZ-204 Exam Fee

AZ-204 EXAM - Developing Solutions on Microsoft Azure

EXAM CONSTRUCT

QUESTIONS : APPROX 45+

- MultipleChoice/DragAndDrop/ArrangeInOrder/CompleteCLI : 35 to 38
- Scenario/Solution meet requirements (Yes or No) : 6 to 9
- 1 Case Study : 5 to 6 questions

PASSING SCORE : 70% TIME DURATION : 2HRS

SKILLS MEASURED

1. Develop Azure compute solutions (25-30%)
2. Develop for Azure storage (15-20%)
3. Implement Azure security (20-25%)
4. Monitor, troubleshoot, and optimize Azure solutions (15-20%)
5. Connect to and consume Azure services and third-party services (15-20%)

Let's Get Started

What's more, part of that Test4Sure AZ-204 dumps now are free: <https://drive.google.com/open?id=1qcEoe-esAvNydIhGee183SSDpZUi9H5V>

The Test4Sure is committed from the first day to help students ace the Microsoft AZ-204 exam at any cost. These formats are Microsoft AZ-204 PDF questions file, desktop practice test software, and web-based practice test software. All these three Test4Sure AZ-204 Exam Questions formats are designed to help applicants ace the Microsoft AZ-204 exam preparation and enable the candidates to crack the final Microsoft AZ-204 exam easily.

The AZ-204 Exam is intended for developers who have a strong understanding of programming languages like C# or Java and have experience with Azure development. AZ-204 exam is suitable for individuals who wish to advance their careers in the field of Azure development and want to validate their skills and expertise in Azure development.

Achieving the Microsoft AZ-204 certification is a valuable credential for developers seeking to advance their career in cloud computing. Developing Solutions for Microsoft Azure certification demonstrates to employers that you have the skills and knowledge to develop solutions using the Azure platform. Additionally, the certification is recognized globally, making it an excellent option for those seeking to work with international clients or organizations.

Valid Microsoft AZ-204 Exam Fee - Valid AZ-204 Test Registration

The passing rate of our AZ-204 exam materials are very high and about 99% and so usually the client will pass the exam successfully. But in case the client fails in the exam unfortunately we will refund the client immediately in full at one time. The refund procedures are very simple if you provide the AZ-204 exam proof of the failure marks we will refund you immediately. If any questions or doubts exist, the client can contact our online customer service or send mails to contact us and we will solve them as quickly as we can. We always want to let the clients be satisfied and provide the best AZ-204 Test Torrent and won't waste their money and energy.

The AZ-204 exam covers a wide range of topics, including developing Azure compute solutions, developing Azure storage solutions, implementing Azure security, monitoring, troubleshooting, and optimizing Azure solutions, and connecting to and consuming Azure services and third-party services. AZ-204 exam is designed to test the developer's ability to design, develop, and implement solutions using Azure services and their knowledge of Azure development tools and technologies. AZ-204 Exam is perfect for developers who want to demonstrate their skills in developing cloud-based applications and services using Microsoft Azure.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q371-Q376):

NEW QUESTION # 371

You need to correct the corporate website error.

Which four actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

□

Answer:

Explanation:

Explanation:

Scenario: Corporate website

While testing the site, the following error message displays:

CryptographicException: The system cannot find the file specified.

Step 1: Generate a certificate

Step 2: Upload the certificate to Azure Key Vault

Scenario: All SSL certificates and credentials must be stored in Azure Key Vault.

Step 3: Import the certificate to Azure App Service

Step 4: Update line SCO5 of Security.cs to include error handling and then redeploy the code Reference:

<https://docs.microsoft.com/en-us/azure/app-service/configure-ssl-certificate>

NEW QUESTION # 372

You have a web app named MainApp. You are developing a triggered App Service background task by using the WebJobs SDK.

This task automatically invokes a function code whenever any new data is received in a queue.

You need to configure the services.

Which service should you use for each scenario? To answer, drag the appropriate services to the correct scenarios. Each service may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: WebJobs

A WebJob is a simple way to set up a background job, which can process continuously or on a schedule.

WebJobs differ from a cloud service as it gives you get less fine-grained control over your processing environment, making it a more true PaaS service.

Box 2: Flow

NEW QUESTION # 373

You need to resolve the Shipping web site error.

How should you configre the Azure Table Storage service? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

<https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Access-Control-Allow-Origin>

Topic 3, City Power & Light

Current environment

Architecture Overview

The company has a public website located at <http://www.cpndl.com/>. The site is a single-page web application that runs in Azure App Service on Linux. The website uses files stored in Azure Storage and cached in Azure Content Delivery Network (CDN) to serve static content.

API Management and Azure Function App functions are used to process and store data in Azure Database for PostgreSQL. API Management is used to broker communications to the Azure Function app functions for Logic app integration. Logic apps are used to orchestrate the data processing while Service Bus and Event Grid handle messaging and events.

The solution uses Application Insights, Azure Monitor, and Azure Key Vault.

Architecture diagram

The company has several applications and services that support their business. The company plans to implement serverless computing where possible. The overall architecture is shown below.

User authentication

The following steps detail the user authentication process:

The user selects Sign in in the website.

The browser redirects the user to the Azure Active Directory (Azure AD) sign in page.

The user signs in.

Azure AD redirects the user's session back to the web application. The URL includes an access token.

The web application calls an API and includes the access token in the authentication header. The application ID is sent as the audience ('aud') claim in the access token.

The back-end API validates the access token.

Requirements

Corporate website

Communications and content must be secured by using SSL.

Communications must use HTTPS.

Data must be replicated to a secondary region and three availability zones.

Data storage costs must be minimized.

Azure Database for PostgreSQL

The database connection string is stored in Azure Key Vault with the following attributes:

Azure Key Vault name: cpandlkeyvault

Secret name: PostgreSQLConn

Id: 80df3e46ffcd4f1cb187f79905e9a1e8

The connection information is updated frequently. The application must always use the latest information to connect to the database.

Azure Service Bus and Azure Event Grid

Azure Event Grid must use Azure Service Bus for queue-based load leveling.

Events in Azure Event Grid must be routed directly to Service Bus queues for use in buffering.

Events from Azure Service Bus and other Azure services must continue to be routed to Azure Event Grid for processing.

Security

All SSL certificates and credentials must be stored in Azure Key Vault.

File access must restrict access by IP, protocol, and Azure AD rights.

All user accounts and processes must receive only those privileges which are essential to perform their intended function.

Compliance

Auditing of the file updates and transfers must be enabled to comply with General Data Protection Regulation (GDPR). The file updates must be read-only, stored in the order in which they occurred, include only create, update, delete, and copy operations, and be retained for compliance reasons.

Issues

Corporate website

While testing the site, the following error message displays:

CryptographicException: The system cannot find the file specified.

Function app

You perform local testing for the RequestUserApproval function. The following error message displays:

'Timeout value of 00:10:00 exceeded by function: RequestUserApproval'

The same error message displays when you test the function in an Azure development environment when you run the following Kusto query:

FunctionAppLogs

| where FunctionName == "RequestUserApproval"

Logic app

You test the Logic app in a development environment. The following error message displays:

'400 Bad Request'

Troubleshooting of the error shows an HttpTrigger action to call the RequestUserApproval function.

Code

Corporate website

Security.cs:

Function app

RequestUserApproval.cs:

□

NEW QUESTION # 374

You are implementing a software as a service (SaaS) ASP.NET Core web service that will run as an Azure Web App. The web service will use an on-premises SQL Server database for storage. The web service also includes a WebJob that processes data updates. Four customers will use the web service.

Each instance of the WebJob processes data for a single customer and must run as a singleton instance.

Each deployment must be tested by using deployment slots prior to serving production data.

Azure costs must be minimized.

Azure resources must be located in an isolated network.

You need to configure the App Service plan for the Web App.

How should you configure the App Service plan? To answer, select the appropriate settings in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□

Reference:

<https://azure.microsoft.com/sv-se/blog/announcing-app-service-isolated-more-power-scale-and-ease-of-use/>

NEW QUESTION # 375

You need to add markup at line AM04 to implement the ContentReview role.

How should you complete the markup? To answer, drag the appropriate json segments to the correct locations. Each json segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□

Explanation:

Box 1: allowedMemberTypes

allowedMemberTypes specifies whether this app role definition can be assigned to users and groups by setting to "User", or to other applications (that are accessing this application in daemon service scenarios) by setting to "Application", or to both.

Note: The following example shows the appRoles that you can assign to users.

"appId": "8763f1c4-f988-489c-a51e-158e9ef97d6a",

"appRoles": [

{

"allowedMemberTypes": [

"User"

],

"displayName": "Writer",

"id": "d1c2ade8-98f8-45fd-aa4a-6d06b947c66f",

"isEnabled": true,

"description": "Writers Have the ability to create tasks.",

"value": "Writer"

}

],

"availableToOtherTenants": false,

Box 2: User

Scenario: In order to review content a user must be part of a ContentReviewer role.

Box 3: value

value specifies the value which will be included in the roles claim in authentication and access tokens.
