## AD0-E724 Official Study Guide | New AD0-E724 Dumps

AD0-E724 study material is suitable for all people. Whether you are a student or an office worker, whether you are a veteran or a rookie who has just entered the industry, AD0-E724 test answers will be your best choice. For office workers, AD0-E724 test dumps provide you with more flexible study time. You can download learning materials to your mobile phone and study at anytime, anywhere. And as an industry rookie, those unreadable words and expressions in professional books often make you feel mad, but AD0-E724 Study Materials will help you to solve this problem perfectly.

## Adobe Commerce Developer Professional Sample Questions (Q78-Q83):

### NEW QUESTION # 78

An Adobe Commerce developer has created a before plugin for the `save()` function within the `Magento\Framework\App\Cache\Proxy` class. The purpose of this plugin is to add a prefix on all cache identifiers that fulfill certain criteria.

Why is the plugin not executing as expected?

- A. Another around plugin defined for the same function does not call the callable.
- B. Cache identifiers are immutable and cannot be changed.
- C. The target Class implements `Magento\Framework\ObjectManager\NoninterceptableInterface`.

**Answer: C**

Explanation:

According to the Plugins (Interceptors) guide for Magento 2 developers, plugins are class methods that modify the behavior of public class methods by intercepting them and running code before, after, or around them. However, some classes in Magento 2

implement the `NoninterceptableInterface` interface, which prevents plugins from being generated for them. The `Magento\Framework\App\Cache\Proxy` class is one of them, as it extends from `Magento\Framework\ObjectManager\NoninterceptableInterface`. Therefore, the plugin is not executing as expected because the target class implements `NoninterceptableInterface`. Verified References: <https://devdocs.magento.com/guides/v2.3/extension-dev-guide/plugins.html>

### NEW QUESTION # 79

An Adobe Commerce developer is asked to change the tracking level on a custom module for free downloading of pdf and images. The module contains following models:

`Vendor\FreeDownload\Model\Download`

`Vendor\FreeDownload\Model\DownloadPdf` extends `Vendor\FreeDownload\Model\Download`

`Vendor\FreeDownload\Model\DownloadImage` extends `Vendor\FreeDownload\Model\Download` Download class has a parameter for tracking\_level.

How will the developer configure the tracking\_level parameter, in di.xml, to have a value of 4 for Download class and all classes that extend Download?

- Configure the parameter on the all child classes and set the parent attribute on one of them.

```
<type name="Vendor\FreeDownload\Model\DownloadPdf"
  parent="Vendor\FreeDownload\Model\Download">
  <arguments>
    <argument name="tracking_level" xsi:type="number">4</argument>
  </arguments>
</type>
...
<type name="Vendor\FreeDownload\Model\DownloadImage">
  <arguments>
    <argument name="tracking_level" xsi:type="number">4</argument>
  </arguments>
</type>
...
```

A.
- B.

Configure the parameter on a child class and add parent attribute as it will be propagated to siblings and parent.

```
<type
  name="Vendor\FreeDownload\Model\DownloadPdf"
  parent="Vendor\FreeDownload\Model\Download"
>
  <arguments>
    <argument name="tracking_level" xsi:type="integer">4</argument>
  </arguments>
</type>
```
- C.

Configure the parameter on parent class, as it will be propagated on descendant classes.

```
<type name="Vendor\FreeDownload\Model\Download">
  <arguments>
    <argument name="tracking_level" xsi:type="number">4</argument>
  </arguments>
</type>
```

**Answer: C**

Explanation:

To configure a parameter for a parent class so that it propagates to all descendant classes, the correct approach is to define the parameter on the parent class within di.xml. This way, all child classes inheriting from this parent will automatically use the parameter value unless explicitly overridden.

Option C is correct for the following reasons:

\* Configuring on the Parent Class (`Vendor\FreeDownload\Model\Download`): By setting the tracking\_level parameter directly on the Download class, you ensure that all classes extending this class, such as `DownloadPdf` and `DownloadImage`, will inherit the tracking\_level parameter value. This method leverages Magento's dependency injection configuration, which allows parameters set on a parent class to cascade to child classes.

\* Explanation: In Magento's dependency injection system, parameters configured at the parent class level are available to all child classes unless overridden at a more specific level. Defining tracking\_level in the parent class is efficient and ensures consistency across all subclasses.

### NEW QUESTION # 80

A custom theme is being developed in the Adobe Commerce store, and the developer needs to override the current parent theme

styles.

Which less file should the developer use to achieve this goal?

- A. **\_hemeless**
- B. **\_source.less**
- C. **\_theme.override.less**

**Answer: A**

Explanation:

To override the current parent theme styles in a custom theme being developed for Adobe Commerce, the developer should use the `_theme.less` file. This file is specifically designed for customizing and overriding the default styles provided by the parent theme, making option B the correct choice. The `_theme.less` file is a central place for theme-specific customizations.

### NEW QUESTION # 81

For security reasons, merchant requested to a developer to change default admin url to a unique url for every branch/environment of their Adobe Commerce Cloud project.

Which CLI command would the developer use update the admin url?

- A. `ece-tools variable:update ADMIN_URL`
- B. `bin/magento adminurl:set <admin_url>`
- C. **`magento-cloud variable:set ADMIN_URL`**

**Answer: C**

Explanation:

The CLI command that the developer would use to update the admin url is `magento-cloud variable:set ADMIN_URL`. This command sets an environment variable called `ADMIN_URL` with a custom value for the admin url on a specific environment. Environment variables are configuration settings that affect the behavior of the Adobe Commerce Cloud application and services. By setting an environment variable for `ADMIN_URL`, the developer can change the default admin url to a unique url for every branch/environment of their Adobe Commerce Cloud project. Verified References: [Magento 2.4 DevDocs]

### NEW QUESTION # 82

An Adobe Commerce developer is working on a module to manage custom brand entities and wants to replicate the following SQL query using SearchCriteria:

```
$filter1->setField('featured')
    ->setValue(1)
    ->setConditionType('eq');

$filter2->setField('logo_image')
    ->setConditionType('notnull');

$filterGroup1->setFilters([$filter1, $filter2]);

$filter3->setField('enabled')
    ->setValue(1)
    ->setConditionType('eq');

$filterGroup2->setFilters([$filter3]);

$searchCriteria->setFilterGroups([$filterGroup1, $filterGroup2]);
```

- A.
- B.

```
$filter1->setField('enabled')
    ->setValue(1)
    ->setConditionType('eq');

$searchCriteria->setFilter($filter1);
$filter2->condition('featured = ? OR logo image ?', [1, 'IS NOT NULL'])
$searchCriteria->setSelectFields($filter2);
```

```

$filter1->setField('featured')
->setValue(1)
->setConditionType('eq');

$filter2->setField('logo_image')
->setConditionType('notnull');

$filter3->setField('enabled')
->setValue(1)
->setConditionType('eq');

$searchCriteria->setFilter($filter3)
->setOrFilter([$filter1, $filter2]);

```

- C.

**Answer: A**

Explanation:

The correct answer is Option A. This approach uses two filter groups to correctly implement the logic from the SQL query using Magento's SearchCriteria API.

\* Understanding the Logic: The given SQL query contains two main conditions:

\* featured = 1 AND logo\_image IS NOT NULL (grouped together with an AND condition)

\* enabled = 1

In the Magento SearchCriteria terms, these translate to:

\* Filter Group 1: featured = 1 AND logo\_image IS NOT NULL

\* Filter Group 2: enabled = 1

The two filter groups are then combined using an implicit AND condition.

\* Magento's SearchCriteria Structure: The SearchCriteria object is the recommended way in Magento 2 to filter and retrieve collections with complex conditions.

\* Filter Groups: Used to group filters together. All filters within a filter group are combined with an AND condition.

\* Filters: Define a condition for a single field.

\* Explanation of the Code for Option A:

\* Filter 1 is created for the featured field, set to 1 with an eq condition type.

\* Filter 2 is created for the logo\_image field, with a notnull condition type.

\* Both Filter 1 and Filter 2 are combined into Filter Group 1, which applies an AND condition between these filters.

\* Filter 3 is created for the enabled field, set to 1 with an eq condition type.

\* Filter Group 2 contains only Filter 3.

\* Finally, both filter groups are set on the SearchCriteria object. By default, the SearchCriteria combines filter groups using an AND condition between them.

\* Why Option A is Correct: Option A uses two filter groups that exactly match the desired SQL query logic:

\* It correctly combines featured and logo\_image in an AND condition.

\* It then checks if enabled is 1, which is handled by the second filter group.

## NEW QUESTION # 83

.....

If you just free download the demos of our AD0-E724 exam questions, then you will find that every detail of our AD0-E724 study braindumps is perfect. Not only the content of the AD0-E724 learning guide is the latest and accurate, but also the displays can cater to all needs of the candidates. It is all due to the efforts of the professionals. These professionals have full understanding of the candidates' problems and requirements hence our AD0-E724 training engine can cater to your needs beyond your expectations.

**AD0-E724 Official Study Guide:** <https://www.exam4docs.com/AD0-E724-study-questions.html>

To boost the candidates who eager to be success of this exam, our AD0-E724 test cram materials are bountiful of useful contents with considerate bona services, What's more, our AD0-E724 prep torrent conveys more important information with less questions and answers, Adobe AD0-E724 Exam Study Solutions Preparation through these exams dumps automatically builds up the confidence, Adobe AD0-E724 Exam Study Solutions Or you would like to wait for the update version or change to other exam actual test dumps, we will approve of your idea.

Why Are We Not Self-Organizing. You can evaluate AD0-E724 Official Study Guide candidate products in depth to more reliably determine the best ones, To boost the candidates who eager to be success of this exam, our AD0-E724 Test Cram materials are bountiful of useful contents with considerate bona services.

**100% Pass Quiz Adobe - Professional AD0-E724 - Commerce Developer**

## Professional Exam Study Solutions

What's more, our AD0-E724 prep torrent conveys more important information with less questions and answers, Preparation through these exams dumps automatically builds up the confidence.

Or you would like to wait for the update version AD0-E724 or change to other exam actual test dumps, we will approve of your idea, With the rapid development of the world economy, it has been universally AD0-E724 Official Study Guide accepted that a growing number of people have longed to become the social elite.
