Pass 212-82 Exam with ECCouncil's Exam Questions and Achieve 100% Success on Your First Try

The ECCouncil 212-82 exam practice questions are being offered in three different formats. These formats are ECCouncil 212-82 web-based practice test software, desktop practice test software, and PDF dumps files. All these three ECCouncil 212-82 exam questions format are important and play a crucial role in your Certified Cybersecurity Technician (212-82) exam preparation. With the ECCouncil 212-82 exam questions you will get updated and error-free Certified Cybersecurity Technician (212-82) exam questions all the time. In this way, you cannot miss a single 212-82 exam question without an answer.

ECCouncil Certified Cybersecurity Technician Sample Questions (Q37-Q42):

NEW QUESTION # 37

The SOC department in a multinational organization has collected logs of a security event as "Windows.events.evtx". Study the Audit Failure logs in the event log file located in the Documents folder of the "Attacker Machine-1" and determine the IP address of the attacker. (Note: The event ID of Audit failure logs is 4625.)

- A. 10.10.1.12
- B. 10.10.1.10
- C. 10.10.1.16
- D. 10.10.1.19

Answer: C

Explanation:

The IP address of the attacker is 10.10.1.16. This can be verified by analyzing the Windows.events.evtx file using a tool such as Event Viewer or Log Parser. The file contains several Audit Failure logs with event ID 4625, which indicate failed logon attempts to the system.

The logs show that the source network address of the failed logon attempts is 10.10.1.16, which is the IP address of the attacker.

NEW QUESTION # 38

An organization's risk management team identified the risk of natural disasters in the organization's current location. Because natural disasters cannot be prevented using security controls, the team suggested to build a new office in another location to eliminate the identified risk. Identify the risk treatment option suggested by the risk management team in this scenario.

- A. Risk avoidance
- B. Risk retention
- C. Risk sharing
- D. Risk modification

Answer: A

Explanation:

Risk avoidance is the risk treatment option suggested by the risk management team in this scenario. Risk avoidance is a risk treatment option that involves eliminating the identified risk by changing the scope, requirements, or objectives of the project or activity. Risk avoidance can be used when the risk cannot be prevented using security controls or when the risk outweighs the benefits. Reference: Risk Avoidance

NEW QUESTION # 39

A threat intelligence feed data file has been acquired and stored in the Documents folder of Attacker Machine-1 (File Name: Threatfeed.txt). You are a cybersecurity technician working for an ABC organization. Your organization has assigned you a task to analyze the data and submit a report on the threat landscape. Select the IP address linked with <http://securityabc.s21sec.com>

- A. 5.9.110.120
- B. 5.9.188.148
- C. 5.9.200.200
- D. 5.9.200.150

Answer: B

Explanation:

5.9.188.148 is the IP address linked with <http://securityabc.s21sec.com> in the above scenario. A threat intelligence feed is a source of data that provides information about current or potential threats and attacks that can affect an organization's network or system. A threat intelligence feed can include indicators of compromise (IoCs), such as IP addresses, domain names, URLs, hashes, etc., that can be used to detect or prevent malicious activities. To analyze the threat intelligence feed data file and determine the IP address linked with <http://securityabc.s21sec.com>, one has to follow these steps:

Navigate to the Documents folder of Attacker-1 machine.

Open Threatfeed.txt file with a text editor.

Search for <http://securityabc.s21sec.com> in the file.

Observe the IP address associated with the URL.

The IP address associated with the URL is 5.9.188.148, which is the IP address linked with <http://securityabc.s21sec.com>.

NEW QUESTION # 40

As the senior network analyst for a leading fintech organization, you have been tasked with ensuring seamless communication

between the firm's global offices. Your network has been built with redundancy in mind, leveraging multiple service providers and a mixture of MPLS and public internet connections. One week after deploying a state-of-the-art Network Performance Monitoring & Diagnostics (NPM) tool, you notice unusual traffic patterns originating from your European data center and targeting the corporate headquarters in New York. The traffic spikes periodically, heavily utilizing the MPLS link and sometimes saturating the public internet connection, resulting in significant data packet losses and application failures. Your task is to identify the root cause of these traffic anomalies and ensure optimal network performance for all critical business operations. Given this scenario, what could be the primary cause for these traffic spikes, and what should your immediate course of action be?

- **A. Faulty Network Hardware - The network hardware in the European data center, such as routers or switches, might be malfunctioning, causing inconsistent traffic bursts. Diagnosing the hardware, checking for faults, and replacing the faulty equipment should be the immediate action.**
- B. MPLS Link Flapping - The MPLS link might be experiencing flapping, leading to inconsistent traffic flow. It is crucial to liaise with the MPLS service provider to inspect the link stability and consider a backup link or an alternate route to reroute the traffic.
- C. Data Backup and Replication - The European data center might be running data backup or replication processes during peak business hours. You should liaise with the data center team to reschedule backup operations to non-peak hours and ensure that backup processes are bandwidth-aware.
- D. Unauthorized Application Usage - The European data center staff might be using unauthorized applications or services that are consuming massive bandwidth. You should enforce strict Application and Network Access Control policies, and scrutinize the application traffic to restrict non business- critical applications.

Answer: A

NEW QUESTION # 41

The SOC department in a multinational organization has collected logs of a security event as "Windows.events.evtx". Study the Audit Failure logs in the event log file located in the Documents folder of the -Attacker Machine-1" and determine the IP address of the attacker. (Note: The event ID of Audit failure logs is 4625.)

(Practical Question)

- A. 10.10.1.12
- B. 10.10.1.10
- **C. 10.10.1.16**
- D. 10.10.1.19

Answer: C

Explanation:

The IP address of the attacker is 10.10.1.16. This can be verified by analyzing the Windows.events.evtx file using a tool such as Event Viewer or Log Parser. The file contains several Audit Failure logs with event ID 4625, which indicate failed logon attempts to the system. The logs show that the source network address of the failed logon attempts is 10.10.1.16, which is the IP address of the attacker. The screenshot below shows an example of viewing one of the logs using Event Viewer: Reference: Audit Failure Log, [Windows.events.evtx], [Screenshot of Event Viewer showing Audit Failure log]

NEW QUESTION # 42

.....

No doubt the Certified Cybersecurity Technician (212-82) certification exam is a challenging exam that always gives a tough time to their candidates. However, with the help of ExamDumpsVCE ECCouncil Exam Questions, you can prepare yourself quickly to pass the Certified Cybersecurity Technician exam. The ExamDumpsVCE ECCouncil 212-82 Exam Dumps are real, valid, and updated ECCouncil 212-82 practice questions that are ideal study material for quick Certified Cybersecurity Technician exam dumps preparation.
