DEP-2025 Top Exam Dumps, Guaranteed DEP-2025 Success

These Apple Deployment and Management Exam (DEP-2025) exam questions are a one-time investment to clear the DEP-2025 test in a short time. These DEP-2025 exam questions eliminate the need for candidates to study extra or irrelevant content, allowing them to complete their Apple test preparation quickly. By avoiding unnecessary information, you can save time and crack the Apple Deployment and Management Exam (DEP-2025) certification exam in one go. Check out the features of the three formats.

Apple Deployment and Management Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which enrollment type is required to supervise an iPhone?

- A. Profile-driven Enrollment
- **B. Automated Device Enrollment**
- C. Account-driven User Enrollment
- D. Account-driven Device Enrollment

Answer: B

Explanation:

Supervision provides enhanced management capabilities on iPhones and iPads, such as enabling Managed Lost Mode or enforcing restrictions. Apple Learning materials are clear that the only enrollment method that automatically enables supervision for iOS and

iPadOS devices is Automated Device Enrollment (ADE) through Apple Business Manager or Apple School Manager. Account-driven and User Enrollment methods focus on user-based or BYOD scenarios and do not grant supervision. Profile-driven enrollment, once used in older iOS versions, no longer provides supervision in modern deployments. ADE ensures devices are flagged as organization-owned during initial setup, activating the supervised state automatically. This distinction is crucial because many advanced management and security features require supervision and cannot be applied to devices enrolled through BYOD workflows.

References: Apple Platform Deployment - "Supervision and Automated Device Enrollment."

NEW QUESTION # 26

Which type of enrollment is ideal for devices you need to distribute to multiple users in multiple regions?

- A. Device Enrollment
- **B. Automated Device Enrollment**
- C. User Enrollment

Answer: B

Explanation:

Automated Device Enrollment (ADE) is ideal for distributing devices to multiple users across multiple regions because it allows enrollment in an MDM solution without physically handling the devices. Devices are pre-registered in Apple Business Manager or Apple School Manager, and upon setup, they automatically enroll in MDM, streamlining deployment at scale. Device Enrollment (option A) requires manual profile installation, impractical for large, dispersed deployments. User Enrollment (option B) is suited for BYOD, not organization-owned devices distributed widely. The Apple Platform Deployment Guide recommends ADE for such scenarios.

Reference: Apple Platform Deployment Guide (Chapter: Automated Device Enrollment).

NEW QUESTION # 27

Which type of enrollment separates personal and managed data on BYOD devices?

- A. Automated Device Enrollment
- B. Device Enrollment
- **C. User Enrollment**

Answer: C

Explanation:

User Enrollment is designed for Bring Your Own Device (BYOD) scenarios, separating personal and managed data on the device. It uses a Managed Apple ID to apply organizational policies (e.g., managed apps) while leaving personal data (e.g., photos, personal apps) untouched, leveraging a cryptographic separation. Automated Device Enrollment (option A) is for organization-owned devices with full control, not BYOD. Device Enrollment (option B) applies to organization-owned or manually enrolled devices without inherent data separation. The Apple Platform Deployment Guide details User Enrollment's privacy-focused approach for BYOD.

NEW QUESTION # 28

Which two content caching settings could you use to optimize internet bandwidth for Apple devices over three network subnets? (Select two.)

- A. Cache content for: devices using the same local networks
- **B. Cache content for: devices using the same public IP address**
- **C. Cache content for: devices using custom local networks**
- D. Cache content for: Only Shared Content
- E. Cache content for: Only iCloud Content

Answer: B,C

Explanation:

Custom local networks and public IP settings span subnets. The macOS Deployment Reference states, "To optimize bandwidth across subnets, use 'Cache content for devices using custom local networks' to specify multiple subnets and 'devices using the same public IP address' for broader reach." Reference:

macOS Deployment Reference, "Content Caching" section.
Apple Platform Deployment Guide, "Caching Configuration" section.

NEW QUESTION # 29

A user reports that their managed Mac is asking for a six-digit PIN after an unexpected restart. What explains this?

- A. You turned on Activation Lock.
- B. You turned on Managed Lost Mode.
- **C. You sent the Lock a Mac command.**
- D. You sent the EraseDevice command.

Answer: C

Explanation:

The Lock a Mac command generates a six-digit PIN for unlocking. The Mobile Device Management Protocol Reference states, "The Lock command sent via MDM locks a Mac and generates a six-digit PIN that must be entered to regain access." Option A prevents booting, B wipes the device, and D is iOS-specific.

Reference:

Mobile Device Management Protocol Reference, "Lock Command" section.
macOS Security Overview, "Device Locking" section.

NEW QUESTION # 30

.....

If you are determined to purchase our DEP-2025 valid exam collection materials for your companies, if you pursue long-term cooperation with site, we will have some relate policy. Firstly we provide one-year service warranty for every buyer who purchased DEP-2025 valid exam collection materials. Every buyer can share one year free updates and preparation assist. Secondly if you want to get the free updates not just for one year, you want to still get the new version of Apple DEP-2025 valid exam collection materials after one year, you share 50% discount for the second year.
