

# Quiz 2026 Salesforce Perfect Latest Plat-Admn-202 Exam Questions

BONUS!!! Download part of Prep4sureExam Plat-Admn-202 dumps for free: <https://drive.google.com/open?id=1kTRWhDgkfa2QqGH7RP4LSfDPBb5026NS>

We have three different versions of our Plat-Admn-202 exam questions which can cater to different needs of our customers. They are the versions: PDF, Software and APP online. The PDF version of our Plat-Admn-202 exam simulation can be printed out, suitable for you who like to take notes, your unique notes may make you more profound. The Software version of our Plat-Admn-202 Study Materials can simulate the real exam. Adn the APP online version can be applied to all electronic devices.

## Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>App Deployment:</b> This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Salesforce Fundamentals:</b> This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>User Interface:</b> This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Data Modeling and Management:</b> This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Business Logic and Process Automation:</b> This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.</li> </ul>

## Plat-Admn-202 Latest Study Questions, Plat-Admn-202 Download Demo

all of our Salesforce Plat- Admn-202 exam questions follow the latest exam pattern. We have included only relevant and to-the-point Salesforce Plat- Admn-202 exam questions for the Salesforce Certified Platform App Builder exam preparation. You do not need to waste time preparing for the exam with extra or irrelevant outdated Salesforce Plat- Admn-202 exam questions. Employers in multinational companies do not want people who have passed the Plat- Admn-202 Exam but do not understand the Salesforce Plat- Admn-202 exam topics in depth. Our Salesforce Certified Professionals make sure that Plat- Admn-202 exam questions cover all core exam topics, allowing you to better understand the important exam topics.

### Salesforce Certified Platform App Builder Sample Questions (Q229-Q234):

#### NEW QUESTION # 229

After discovering a second sun in the solar system, Ursa Major Solar wants to change the field relationship between `Sun\_c` and `Planet\_c` to a lookup rather than a master- detail. What should an app builder consider about the effect on reporting before making this change?

- A. Existing roll-up summary fields will be deleted from the `Sun\_c` object and from any reports where they were added.
- B. Existing reports created under the `Sun\_c` with `Planet\_c` report type made by Salesforce will be deleted.
- **C. Existing reports created under the `Sun\_c` with `Planet\_c` report type made by Salesforce will be unusable, but not deleted.**
- D. Existing roll-up summary fields will remain on the `Sun\_c` object and available for reporting, but will no longer update.

**Answer: C**

Explanation:

The correct answer is A. Existing reports created under the Sun\_\_c with Planet\_\_c report type made by Salesforce will be unusable, but not deleted.

When a relationship is changed from master-detail to lookup, the available standard report types can change. Salesforce documentation notes that converting a lookup relationship to master-detail or vice versa can make existing custom reports unusable because of differences in available standard report types.

B is incorrect because roll-up summary fields are not automatically deleted from reports as part of the conversion. In fact, Salesforce states that a master-detail relationship cannot be converted to lookup while roll-up summary fields exist on the master object.

C is incorrect because roll-up summary fields do not remain and simply stop updating.

D is incorrect because the reports are not deleted; they become unusable.

### NEW QUESTION # 230

Ursa Major Solar wants to automate a welcome email to new clients and include a customized survey about their buying experience. An app builder is tasked with this project and has very little time to build the solution from scratch, but still needs to be able to fully customize the solution.

What should the app builder do to meet the deadline and custom requirements?

- A. Work with a developer to create custom Apex code and a Lightning web component survey to meet the criteria,
- B. Choose an unmanaged package from AppExchange that closely meets the requirements of the project and allows programmatic development.
- C. Choose a managed package from AppExchange that closely meets the requirements of the project, restricts programmatic development, but allows declarative development
- **D. Use Salesforce flow to build the survey declaratively to meet the criteria and send it to the customer as an email.**

**Answer: D**

Explanation:

Given the need to automate a welcome email including a customized survey with customization requirements and a tight timeline, the best approach is:

Use Salesforce Flow to build the survey declaratively to meet the criteria and send it to the customer as an email (B). Flow is a powerful tool for automation in Salesforce, allowing the creation of complex workflows and user interactions without needing to write custom code. It can be used to build a survey and integrate it with email services for automated dispatch.

Working with a developer to create custom Apex and LWC (A) might meet the criteria but would not align with the limited time frame. Managed (C) and unmanaged packages (D) from AppExchange can provide pre-built solutions, but they may not offer the needed customization or could require more setup time than building directly in Flow.

Reference for automating processes with Salesforce Flow:

Salesforce Flow: [https://help.salesforce.com/articleView?id=sf.flow\\_considerations\\_design.htm&type=5](https://help.salesforce.com/articleView?id=sf.flow_considerations_design.htm&type=5)

### NEW QUESTION # 231

A new field is being created on a custom object. However, the app builder does not want the field to up on pre-existing custom report Types. What should the app builder do on the custom field setup to fulfill this requirement?

- A. Remove the new field from all page layouts.
- B. Remove visibility to all report profiles.
- **C. Deselect auto add to custom report type.**
- D. Grant read-only access to all report profiles.

**Answer: C**

Explanation:

The correct answer is D. Deselect auto add to custom report type.

When creating a new custom field, Salesforce provides an Auto Add option that can automatically add the new field to applicable existing custom report types. If the app builder does not want the new field to appear on pre-existing custom report types, they should deselect the Auto add to custom report type option during field creation. Salesforce release documentation confirms that Auto Add automatically adds custom fields to custom report types based on that object.

Why the other options are incorrect:

Removing the field from page layouts only affects record-page visibility, not report type availability.

Changing profile visibility or read-only access affects field security, not whether the field is added to the custom report type layout.

### NEW QUESTION # 232

At Universal containers, all US Sales reps should be able to view the US Team dashboard, however, only the US sales directors should be able to see the data in the component and view its source report. How can an app builder ensure the proper access is granted?

- A. Share the dashboard with the public group US Sales Reps and share the dashboard source reports folder with the US Sales Director profile

- B. Make the dashboard dynamic and give US Sales Reps the view my teams dashboard permission
- C. Share the dashboard folder with roles and subordinates of the US Sales Director and share the report folder with the role of US Sales Director
- D. Make the US Sales Director the running user and share the dashboard folder with the role US Sales Rep

**Answer: C**

Explanation:

Sharing the dashboard folder with roles and subordinates of the US Sales Director and sharing the report folder with the role of US Sales Director will ensure that only the US sales directors can see the data in the component and view its source report, while all US sales reps can view the US Team dashboard. Making the US Sales Director the running user will show only his or her data in the component, not the whole team's data. Making the dashboard dynamic will show different data depending on who is viewing it, not based on their role. Sharing the dashboard with the public group US Sales Reps and sharing the dashboard source reports folder with the US Sales Director profile will not prevent other profiles from accessing the reports if they have access to the report folder.

### NEW QUESTION # 233

An app builder at Ursa Major Solar has been working on a new custom app in a sandbox that has been upgraded to the next major Salesforce version, and their production instance is still on the current Salesforce version. The development is complete and they are ready to deploy a change set.

What should the app builder consider when planning the deployment?

- A. The change set will be automatically deployed when production is upgraded.
- B. It will fail if there is a feature only available in the next version.
- C. The deployment is not possible due to different versions.
- D. The change set components will be upgraded to the next version in production.

**Answer: B**

Explanation:

It will fail if there is a feature only available in the next version. According to the Salesforce documentation, "If your sandbox is on a newer version than your production org, you can't deploy any components that are new in the sandbox version." The change set components will not be upgraded to the next version in production, the change set will not be automatically deployed when production is upgraded, and the deployment is possible if there are no new features involved.

### NEW QUESTION # 234

.....

Our Plat-Admn-202 practice materials are suitable for people of any culture level, whether you are the most basic position, or candidates who have taken many exams, is a great opportunity for everyone to fight back. According to different audience groups, our products for the examination of the teaching content of a careful division, so that every user can find a suitable degree of learning materials. More and more candidates choose our Plat-Admn-202 Practice Materials, they are constantly improving, so what are you hesitating about?
